CHAPTER	
1	MAIN CONCEPTS OF PROBABILITY THEORY
1.1	Probability Space, Random Variables, and Mathematical Expectation
1.2	Convergence Theorems
1.3	Independence
1.4	Conditional Expectation
1.5	Random Processes
1.6	Martingales
1.7	Wiener Process
1.8	Stochastic Integral
1.9	Ito's Formula
1.10	Stochastic Differential Equation
1.11	Minimum Variance Estimation
2	STOCHASTIC APPROXIMATION ALGORITHMS
2.1	Introduction
2.2	Analysis Via Techniques of Probability and Differential Equation Theory
2.3	Finding the Zero of a Regression Function: Correlated Noise Case
2.4	Finding the Extremum of Regression Function
2.5	Continuous-Time Stochastic Approximation
2.6	An Example
3	STRONG CONSISTENCY OF LEAST-SQUARES IDENTIFICATION
3.1	Introduction
3.2	Least-Squares Identification
3.3	Least-Squares under Correlated Noise
3.4	Continuous-Time Least-Squares Identification

4 IDENTIFICATION ALGORITHMS OF STOCHASTIC APPROXIMATION TYPE AND ADAPTIVE CONTROL	146
4.1. A Class of Identification Algorithms for Discrete Time	146
4.2. Modified Least-Squares Identification and Estimation for the Covariance Matrix	162
4.3. Continuous-Time Algorithms	174
4.4. Adaptive Control	186
4.5. Adaptive Tracking	211
5 RECURSIVE ESTIMATION AND CONTROL FOR DISCRETE-TIME SYSTEMS	215
5.1. Recursive (Kalman) Filtering, Interpolation, and Prediction for Conditionally Gaussian Systems	215
5.2. Stochastic Observability and Estimation without Knowledge of Initial Values (EWKIV)	236
5.3. Gauss–Markov Estimation	247
5.4. Recursive Formulas for Gauss–Markov Estimates	251
5.5. Control under Quadratic Index	254
6 LINEAR UNBIASED MINIMUM VARIANCE ESTIMATES FOR CONTINUOUS-TIME SYSTEMS	258
6.1. Introduction	258
6.2. The Kalman–Bucy Filter	265
6.3. Interpolation and Prediction	270
6.4. Filtering and Control with Linear Feedback	279
6.5. Stochastic Differential Games	288
7 SINGULAR PROBLEMS	291
7.1. Introduction	291
7.2. Suboptimal Filtering	295
7.3. Suboptimal Interpolation and Prediction	299
7.4. Unified Control Applicable to Possibly Singular Cases	302
7.5. Singular Controls of Special Cases	310
7.6. Unified Strategies	321
8 GAUSS–MARKOV ESTIMATION FOR CONTINUOUS-TIME SYSTEMS	336
8.1. Estimation without Knowledge of Initial Values	336
8.2. Stochastic Observability	353
8.3. Gauss–Markov Filtering, Interpolation, and Prediction	362
8.4. Stochastic Control with a Minimax Index of Quadratic Type	367
