
CONTENTS

Preface	xv
Significant Names in Mechanics and Mathematical Physics	xvii
Chapter 1 Basic Principles	1
1 Newton's Laws	1
Statement of Newton's Laws	1
Conservation Laws	3
2 Systems of Particles	5
Center-of-Mass Motion	5
Angular Momentum	6
Energy	8
3 Central Forces	10
Conservation Laws	10
Effective Potential	11
Inverse-Square Force: Kepler's Laws	13
4 Two-Body Motion with a Central Potential	16
5 Scattering	18
Hyperbolic Orbits in Gravitational Potential	19
General Scattering Orbits	22
Cross Section	23
Rutherford Scattering	25
Scattering by a Hard Sphere	27
Chapter 2 Accelerated Coordinate Systems	31
6 Rotating Coordinate Systems	31
7 Infinitesimal Rotations	33
8 Accelerations	36
9 Translations and Rotations	37

10	Newton's Laws in Accelerated Coordinate Systems	38
11	Motion on the Surface of the Earth	39
	Particle on a Scale	40
	Falling Particle	41
	Horizontal Motion	43
12	Foucault Pendulum	44
 Chapter 3 Lagrangian Dynamics		 49
13	Constrained Motion and Generalized Coordinates	49
	Constraints	49
	Generalized Coordinates	50
	Virtual Displacements	51
14	D'Alembert's Principle	52
15	Lagrange's Equations	53
16	Examples	58
	Pendulum	58
	Bead on a Rotating Wire Hoop	59
17	Calculus of Variations	60
18	Hamilton's Principle	66
19	Forces of Constraint	68
	Pendulum	71
	Atwood's Machine	73
	One Cylinder Rolling on Another	74
20	Generalized Momenta and the Hamiltonian	78
	Symmetry Principles and Conserved Quantities	78
	The Hamiltonian	79
 Chapter 4 Small Oscillations		 86
21	Formulation	86
22	Normal Modes	89
	Simplest Case	89
	Coupled Problem: Formulation	91
	Linear Equations: A Review	92
	Coupled Problem: Eigenvectors and Eigenvalues	93
	Coupled Problem: General Solution	95
	Matrix Notation	96
	Modal Matrix	98
	Normal Coordinates	99
23	Example: Coupled Pendulums	101
24	Example: Many Degrees of Freedom	108
	Two N -Body Problems	108
	Normal Modes	110
25	Transition from Discrete to Continuous Systems	119
	Passage to the Continuum Limit	120
	Direct Treatment of a Continuous String	120
	General Solution to the Wave Equation with Specified Initial Conditions	122
	Lagrangian for a Continuous String	125

	Normal Coordinates	126
	Hamilton's Principle for Continuous Systems	128
Chapter 5	Rigid Bodies	134
26	General Theory	134
	Motion with One Arbitrary Fixed Point	134
	General Motion with No Fixed Point	137
	Inertia Tensor	139
	Principal Axes	140
27	Euler's Equations	143
28	Applications	144
	Compound Pendulum: Kater's Pendulum and the Center of Percussion	144
	Rolling and Sliding Billiard Ball	149
	Torque-free Motion: Symmetric Top	151
	Torque-free Motion: Asymmetric Top	153
29	Euler Angles	154
30	Symmetric Top: Torque-free Motion	156
	Equations of Motion and First Integrals	157
	Description of Motion in Inertial Frame	158
31	Symmetric Top: One Fixed Point in a Gravitational Field	161
	Dynamical Equations	161
	Effective Potential	163
	Small Oscillations about Steady Motion	165
Chapter 6	Hamiltonian Dynamics	173
32	Hamilton's Equations	173
	Review of Lagrangian Dynamics	173
	Hamiltonian Dynamics	175
	Derivation of Hamilton's Equations from a Modified Hamilton's Principle	177
33	Example: Charged Particle in an Electromagnetic Field	179
34	Canonical Transformations	181
35	Hamilton-Jacobi Theory	184
36	Action-Angle Variables	191
37	Poisson Brackets	197
	Basic Formulation	197
	Transition to Quantum Mechanics	198
Chapter 7	Strings	207
38	Review of Field Theory	207
39	D'Alembert's Solution to the Wave Equation	211
	Solution for an Infinite String	211
	Solution for a Finite String	214
	Equivalence of d'Alembert's and Bernoulli's Solution	215
40	Eigenfunction Expansions	219
41	Variational Principle	226
	Basic Formulation	227

	Minimum Character of the Functional	229
	Completeness of Eigenfunctions	232
42	Estimates of Lowest Eigenvalues; The Rayleigh-Ritz Approximation Method	236
	General Theory	237
	Example: Mass Point on a String	239
43	Green's Function in One Dimension	245
	Eigenfunction Expansion	245
	Construction from Solutions to Homogeneous Equations	247
	Example: Uniform String with Fixed Endpoints	249
44	Perturbation Theory	251
	General Theory	252
	Expansion for Small Coupling Strength	254
	Example: Mass Point on a String Revisited	255
45	Energy Flux	258
	Continuity Equation for the Hamiltonian Density	258
	Example: One-dimensional String	262
	Transmission and Reflection at a Discontinuity in Density	263
Chapter 8	Membranes	271
46	General Formulation	271
47	Specific Geometries	274
	Rectangular Membrane	274
	Circular Membrane	279
	Variational Estimate of Lowest Drumhead Mode	283
	Perturbation Theory for Nearly Circular Boundary	284
Chapter 9	Sound Waves in Fluids	290
48	General Equations of Hydrodynamics	290
	Formulation of Newton's Second Law	291
	Conservation of Matter: The Continuity Equation	294
	Conservation of Momentum: Stress Tensor and Euler's Equation	296
	Conservation of Energy	298
	Bernoulli's Theorem	300
	Thomson's (Lord Kelvin's) Theorem on Circulation	302
	Lagrangian for Isentropic Irrotational Flow	303
49	Sound Waves	305
	Fundamental Equations	305
	Standing Waves in Cavities	308
50	Fourier Transforms and Green's Functions in Three Dimensions	311
	Screened Poisson Equation	312
	Helmholtz Equation: Causality and Analyticity	314
	Boundaries and the Method of Images	317

51	Radiation, Diffraction, and Scattering	320
	Radiation from a Piston in a Wall	320
	Diffraction in Kirchhoff's Approximation	325
	Radiation from an Oscillating Sphere	332
	Scattering by a Rigid Cylinder	336
52	Nonlinear Phenomena and Shock Waves	339
	Traveling Waves	340
	Example: Ideal Gas	343
	Shock Waves	347
Chapter 10	Surface Waves on Fluids	357
53	Tidal Waves	357
	Equations of Motion	357
	One-dimensional Waves	359
	Two-dimensional Waves	363
54	Surface Waves	366
	Formulation for Arbitrary Depths	367
	Dispersion Relation	370
	Energy	374
	Group Velocity	376
	Inclusion of Surface Tension	379
55	Initial-Value Problem	383
	Surface Waves on Deep Water	384
	Method of Stationary Phase	387
	Application to Surface Waves	389
56	Solitary Waves	393
	Extended Equation for Tidal Waves	395
	Effective Nonlinear Wave Equation	398
	Solitary Waves	399
Chapter 11	Heat Conduction	406
57	Basic Equations	406
58	Examples	410
	Separation of Variables	411
	Thermal Waves in a Half Space	413
	Infinite Domain: Fourier Transform	415
59	Laplace Transform	417
	Inversion Theorem	417
	Example: Half Space at Fixed Surface Temperature	419
	Example: Sphere Heated Internally	424
	Approximation Methods for Long and Short Times	427
Chapter 12	Viscous Fluids	434
60	Viscous Stress Tensor	434
	Basic Formulation	435
	Navier-Stokes Equation	438
	Energy Balance	441

xii CONTENTS

61	Examples of Incompressible Flow	445
	Steady Flow in a Channel or Pipe	445
	Tangential Flow in a Half Space	448
62	Sound Waves in Viscous Fluids	451
Chapter 13	Elastic Continua	459
63	Basic Formulation	459
	Small Deformations	460
	Stress Tensor	464
	Elastic Energy	468
64	Dynamical Behavior	470
	Equation of Motion	471
	Elastic Waves in an Unbounded Medium	475
Appendix A	Theory of Functions	481
A1	Complex Variables	481
A2	Functions of a Complex Variable	482
A3	Complex Integration	486
A4	Cauchy's Theorem	488
A5	Cauchy's Integral	493
	Morera's Theorem	494
A6	Uniformly Convergent Series	495
	Power Series	496
A7	Taylor's Theorem	497
A8	Laurent Series	498
A9	Theory of Residues	500
A10	Zeros of an Analytic Function	504
A11	Analytic Continuation	506
Appendix B	Curvilinear Orthogonal Coordinates	512
	Gradient	514
	Divergence	514
	Laplacian	516
	Spherical Coordinates	516
	Cylindrical Coordinates	516
	Polar Coordinates in Two Dimensions	517
Appendix C	Separation of Variables	521
	Normal Modes in Polar Coordinates (Two Dimensions)	521
	Normal Modes in Spherical Coordinates (Three Dimensions)	522
	Normal Modes in Cylindrical Coordinates (Three Dimensions)	524
Appendix D	Integral Representations and Special Functions	526
D1	The Γ Function	526
D2	Legendre Functions	531

	$\alpha = l$ (an integer)	532
	Arbitrary α	535
	Legendre Functions of the Second Kind	535
	Arbitrary α	538
D3	Bessel Functions	541
Appendix E	Selected Mathematical Formulas	548
E1	The Γ Function	548
E2	Error Function	549
E3	Legendre Functions	549
	Recursion and General Relations [also for $Q_\alpha(z)$]	549
	Additional Formulas	549
	Explicit Forms for $l = 0, 1, 2, 3, \dots, \infty$ and integral m	550
E4	Cylindrical Bessel Functions	550
	Recursion Relations [also for $N_\nu(z)$]	550
	Series and Approximate Forms (m is a non-negative integer)	551
E5	Spherical Bessel Functions	552
	Special Forms	552
	Recursion Relations [also for $n_i(z)$]	553
Appendix F	Physical Constants	554
Appendix G	Basic Texts and Monographs	556
	Index	557
