

CONTENTS

PART I. BASIC THEORY

Chapter 1. The Development of Statistical Energy Analysis 3

- 1.0 Introduction 3
- 1.1 A Brief Historical Survey 7
- 1.2 The General Procedures of SEA 10
- 1.3 Future Developments of SEA 14
- 1.4 Organization of Part I 16

Chapter 2. Energy Description of Vibrating Systems 20

- 2.0 Introduction 20
- 2.1 Modal Resonators 21
- 2.2 Modal Analysis of Distributed Systems 34
- 2.3 Dynamics of Infinite Systems 43
- 2.4 Modal-Wave Duality 52

Chapter 3. Energy Sharing by Coupled Systems 65

- 3.0 Introduction 65
- 3.1 Energy Sharing Among Resonators 66
- 3.2 Energy Exchange in Multi-Degree-of-Freedom Systems 86
- 3.3 Reciprocity and Energy Exchange in Wave Bearing Systems 93
- 3.4 Some Sample Applications of SEA 103

Chapter 4. The Estimation of Response in Statistical Energy Analysis 115

- 4.0 Introduction 115
- 4.1 Mean Value Estimates of Dynamical Response 116
- 4.2 Calculation of Variance in Temporal Mean Square Response 128
- 4.3 Calculation of Confidence Coefficients 135
- 4.4 Coherence Effects - Pure Tone and Narrow Band Response 140

Annotated Bibliography for Part I 153

PART II. ENGINEERING APPLICATIONS

Introduction to Part II 173

Section I. The Use of SEA in Preliminary Design

Chapter 5. Response Estimation During Preliminary Design 175

Chapter 6. Procedures of Statistical Energy Analysis	178
6.0 Introduction	178
6.1 Modeling the System	178
6.2 Evaluating the Parameters	179
6.3 Solving for the Energy Distribution	181
6.4 Evaluating Response for Energy Estimate	182
Chapter 7. Estimation of Dynamical Response	185
7.0 Introduction	185
7.1 Representations of the Energy Estimate	185
7.2 Conversion from Energy to Other Variables	187
7.3 Response Concentration Factors	192
7.4 Variance and Estimation Intervals	196
7.5 Using Variance to Calculate Safety Factors	199
Chapter 8. Estimating the Energy of Vibration	209
8.0 Introduction	209
8.1 How the Overall System is Described	209
8.2 Alternative Form of the Energy Equations	216
8.3 Parameter Evaluation Using the Energy Equations	217
8.4 Useful Approximations and Simplifications	218
8.5 Summary	221
Chapter 9. The Meaning and Use of SEA Parameters	224
9.0 Introduction	224
9.1 Dissipation Parameters	224
9.2 Power Transfer Parameters	226
9.3 Modal Count of Subsystems	229
9.4 Input Power Prediction	232
9.5 Conclusions	235
Chapter 10. Modeling the System	238
10.0 Introduction	238
10.1 Definition of Subsystems	238
10.2 Identifying and Evaluating the Coupling Between Sub- systems	240
10.3 Subsystems Within a Section of the System	242
10.4 Discussion	243
Section II. Evaluation of SEA Parameters	
Chapter 11. Parameter Evaluation - The Engineering Base of SEA	248
11.0 Introduction	248
11.1 What Are the SEA Parameters?	249
11.2 How Exactly Can (Must) We Know SEA Parameters?	250
11.3 How to Use This Section	251

Chapter 12. The Damping Parameter 252

- 12.0 Introduction 252
- 12.1 Measurement of Damping 253
- 12.2 Damping Values for Materials 255
- 12.3 Damping of Built-up Structures 258
- 12.4 The Damping of Add-On Systems 260

Chapter 13. Evaluating the Mode Count 278

- 13.0 Introduction 278
- 13.1 Experimental Procedures for Determining Mode Count 279
- 13.2 Mode Counts of Acoustical Subsystems 280
- 13.3 Flat Structures 281
- 13.4 Mode Count of Curved Structures 283
- 13.5 One-Dimensional Structure 288

Chapter 14. Evaluating Coupling Loss Factors 294

- 14.0 Introduction 294
- 14.1 Coupling Between Acoustical Spaces 295
- 14.2 Coupling Between Structures and Acoustical Spaces 299
- 14.3 Coupling Between Structural Subsystems 303

Section III. An Example of Response Estimation *by Huw G. Davies*

Chapter 15. Vibration of a Reentry Vehicle 317

- 15.0 Introduction 317
- 15.1 Modeling the Vehicle 317
- 15.2 Modal Density 319
- 15.3 Coupling Loss Factor 323
- 15.4 Prediction of the Vehicle Skin Vibration Levels 334
- 15.5 Vibration Levels of the Instrument Shelf 340
- 15.6 Confidence Limits 344
