

CONTENTS

Introduction	1
PART I - TOPOLOGICAL METHODS OF NON-LINEAR MECHANICS	
Chapter I - Phase Trajectories of Linear Systems	7
1. Phase Plane and Phase Trajectories; Linear Oscillator	7
2. Phase Velocity	9
3. Theorem of Cauchy; Singular Points; Trajectories and Motions	9
4. Phase Trajectory of an Unstable Motion; Saddle Point	14
5. Phase Trajectory of an Oscillatory Damped Motion; Focal Point	16
6. Phase Trajectory of an Aperiodic Damped Motion; Nodal Point	18
7. Method of Isoclines	20
8. Systems with Negative Damping; Froude's Pendulum	21
9. Remarks Concerning Linear Systems	22
Chapter II - Phase Trajectories of Non-Linear Conservative Systems	24
10. General Properties of Non-Linear Conservative Systems	24
11. Topology of Phase Trajectories in the Neighborhood of Singular Points	25
A. Graphical Method	25
B. Analytical Method	26
12. Topology of Trajectories in the Phase Plane. Separatrix	29
13. Behavior of a Conservative System as a Function of a Parameter. Critical Values of a Parameter	32
Poincaré's Theorem (14) (15)	33
14. Motion of an Elastically Constrained Current-Carrying Conductor	34
15. Relative Motion of a Rotating Pendulum	37
Chapter III - Questions of Stability	40
16. Introductory Remarks	40
17. Stability in the Sense of Liapounoff	41
18. Canonical Forms of Linear Equations; Characteristic Equation; Classification of Singularities (Poincaré); Branch Points of Equilibria	42
19. Stability of Equilibrium According to Liapounoff	48
20. Liapounoff's Theorem	51
21. Equilibrium of a Circuit Containing a Non-Linear Conductor (Electric Arc)	55
Chapter IV - Limit Cycles of Poincaré	62
22. Limit Cycles; Definition; Analytical Examples	62
23. Physical Examples	66
24. Topology of Trajectories in the Presence of Singularities and Limit Cycles	68
25. Further Properties of Limit Cycles; Indices of Poincaré; Theorems of Bendixson	75
A. Indices of Poincaré	76
B. First Theorem of Bendixson (The Negative Criterion)	77
C. Second Theorem of Bendixson (5)	78
26. Parallel Operation of Series Generators	79
27. Stability of Periodic Motion	82
Chapter V - Bifurcation Theory (Poincaré)	87
28. Introductory Remarks	87
29. Transition of Singularities. Branch Points of Limit Cycles	88
30. Self-Excitation of Thermionic Generators	95
31. Self-Excitation of Mechanical and Electromechanical Systems	99
A. Self-Excited Oscillations of a Mechanical Control System	99
Case 1. Weak Amplification	101
Case 2. Strong Amplification	101
B. Self-Excited Oscillations in an Electromechanical System	102
Chapter VI - Geometrical Analysis of Existence of Periodic Solutions	105
32. Introductory Remarks	105
33. Liénard's Method	106
34. Existence of Closed Trajectories in the Liénard Plane	108
35. First Asymptotic Case: $\mu \ll 1$	110

36. Second Asymptotic Case: The Parameter μ is Large	111
37. Limit Cycles in the Van der Pol and Liénard Planes	113
Chapter VII - Cylindrical Phase Space	116
38. General Remarks. Limit Cycles of the First and Second Kind	116
39. Differential Equation of an Electromechanical System	117
40. Cylindrical Phase Trajectories of a Conservative System	118
41. Cylindrical Phase Trajectories of a Non-Conservative System	119
42. Closed Trajectories of the Second Kind in Non-Conservative Systems	121
43. Oscillations of a Synchronous Motor	124
PART II - ANALYTICAL METHODS OF NON-LINEAR MECHANICS	
44. Introductory Remarks	135
Chapter VIII - Method of Poincaré	138
45. Condition of Periodicity	138
46. Expansions of Poincaré; Generating Solutions; Secular Terms	141
47. Systems With Two Degrees of Freedom	148
48. Stability of a Periodic Solution	153
49. Limit Cycle and Frequency of a Thermionic Generator	158
50. Bifurcation Theory For Quasi-Linear Systems	160
51. "Soft" and "Hard" Self-Excitation of Thermionic Generators; Oscillation Hysteresis	161
A. Condition For a Soft Self-Excitation	164
B. Condition For a Hard Self-Excitation	165
Chapter IX - Method of Van der Pol	167
52. Rotating System of Axes; Equations of the First Approximation	167
53. Topology of the Plane of the Variables of Van der Pol	169
54. Example: "Soft" and "Hard" Self-Excitation of Thermionic Circuits	172
55. Example: Equation of Lord Rayleigh; Froude's Pendulum	178
56. More General Forms of Non-Linear Equations	181
Chapter X - Theory of the First Approximation of Kryloff and Bogoliuboff	183
57. Introductory Remarks	183
58. Effect of Secular Terms in Solutions by Expansions in Series	183
59. Equations of the First Approximation	186
60. Non-Linear Conservative Systems	189
61. Examples of Non-Linear Conservative Systems	190
A. Pendulum	190
B. Torsional Oscillations of a Shaft	191
C. Electrical Oscillations of a Circuit Containing an Iron Core	192
62. Systems With Non-Linear Damping of a Dissipative Type	192
A. Linear Damping: $f(\dot{x}) = \lambda\dot{x}$	193
B. Quadratic Damping: $f(\dot{x}) = b\dot{x}^2$	194
C. Coulomb Damping: $f(\dot{x}) = A \operatorname{sgn}(\dot{x})$	195
D. Mixed Cases: $f(\dot{x}) = \alpha\dot{x} + \beta\dot{x}^2$	195
63. Systems With Non-Linear Variable Damping	197
A. Van der Pol's Equation	197
B. Rayleigh's Equation	199
64. Existence of Limit Cycles; Systems With Several Limit Cycles	200
65. Stability of Limit Cycles; Critical Values of a Parameter; Systems With Several Limit Cycles	203
66. Limit Cycles in the Case of Polynomial Characteristics	206
Chapter XI - Approximations of Higher Orders	209
67. Introductory Remarks	209
68. Improved First Approximation	210
69. Applications of the Theory of the Improved First Approximation	214
A. Variable "Spring Constant"	215
B. Variable Damping	216
C. Correction For Frequency	217
70. Approximations of Higher Orders	219
71. Motion of a Conservative Non-Linear System With a Cubic Term	222
72. Higher Approximations For Non-Linear, Non-Conservative Systems	223
73. General Form of Equations of Higher Approximations	229

Chapter XII - Method of Equivalent Linearization of Kryloff and Bogoliuboff	233
74. Introductory Remarks	233
75. Method of Equivalent Linearization	234
76. Principle of Equivalent Balance of Energy	236
77. Principle of Harmonic Balance	238
78. Examples of Application of the Method of Equivalent Linearization	239
A. Non-Linear Restoring Force	239
B. Non-Linear Dissipative Damping	240
C. Non-Linear Restoring Force and Non-Linear Dissipative Damping	241
D. Electrical Oscillations in a Circuit Containing a Saturated Core Reactor	242
E. Non-Linear Conductors	242
F. Thermionic Generators	243
References	246

PART III - NON-LINEAR RESONANCE

79. Introductory Remarks	249
Chapter XIII - Systems With Several Degrees of Freedom	251
80. Method of Complex Amplitudes	251
81. Elements of the Theory of Linear Circuits	252
82. Analogies Between Electrical and Mechanical Systems	255
83. Application of the Method of Equivalent Linearization to the Steady State of a Quasi-Linear System	258
84. Application of the Method of Equivalent Linearization to the Transient State of a Quasi-Linear System	262
85. Non-Resonant Self-Excitation of a Quasi-Linear System	267
86. Resonant Self-Excitation of a Quasi-Linear System	269
Chapter XIV - Subharmonics and Frequency Demultiplication	272
87. Combination Tones; Subharmonics	272
88. Equivalent Linearization for Multiperiodic Systems	274
89. Internal Subharmonic Resonance	278
90. Synchronization	283
91. Internal Resonance of the Order One	284
92. Method of Equivalent Linearization in Quasi-Linear Systems With Several Frequencies	285
Chapter XV - External Periodic Excitation of Quasi-Linear Systems	289
93. Equations of the First Approximation for a Periodic Non-Resonant Excitation	289
94. First-Order Solution of Van der Pol's Equation With Forcing Term	293
95. Improved First Approximation For a Non-Resonant External Excitation of a Quasi-Linear System	294
96. Heteroperiodic and Autoperiodic States of Non-Linear Systems; Asynchronous Excitation and Quenching	295
Chapter XVI - Non-Linear External Resonance	301
97. Equations of the First Approximation For an Externally Excited Resonant System	301
98. Fractional-Order Resonance	305
99. Parametric Excitation	308
100. Stability of Non-Linear External Resonance; Jumps	313
Chapter XVII - Subharmonic Resonance on the Basis of the Theory of Poincaré	323
101. Method of Mandelstam and Papalexı	323
102. Resonance of the Order n ; Differential Equations in Dimensionless Form	323
103. Periodic Solutions of a Quasi-Linear Equation With a Forcing Term	326
104. Stability of Periodic Solutions	328
105. Subharmonic Resonance of the Order One-Half for a Soft Self-Excitation	331
106. Nature of Subharmonic Resonance of the Order One-Half for an Underexcited System	335
107. Subharmonic Resonance of the Order One-Half for a Hard Self-Excitation	336
108. Subharmonic Resonance of the Order One-Third	339
109. Experimental Results	340
Chapter XVIII - Entrainment of Frequency	341
110. Introductory Remarks	341
111. Differential Equations of Van der Pol	342
112. Representation of the Phenomenon in the Phase Plane	344

113. Nature and Distribution of Singularities; Transient State of Entrainment	346
114. Steady State of Entrainment	350
115. Acoustic Entrainment of Frequency	351
116. Other Forms of Entrainment	352
Chapter XIX - Parametric Excitation	355
117. Heteroparametric and Autoparametric Excitation	355
118. Differential Equations With Periodic Coefficients	356
119. Stable and Unstable Regions of the Mathieu Equation	359
120. Physical Nature of Solutions	361
121. Topology of the Hill-Meissner Equation	362
122. Dependence of Heteroparametric Excitation on Frequency and Phase of the Parameter Variation	365
123. Heteroparametric Excitation of a Dissipative System	369
124. Heteroparametric Machine of Mandelstam and Papalexı	372
125. Subharmonic Resonance on the Basis of the Mathieu-Hill Equation	373
126. Autoparametric Excitation	374
References	378
PART IV - RELAXATION OSCILLATIONS	
127. Introductory Remarks	381
Chapter XX - Fundamentals of the Discontinuous Theory of Relaxation Oscillations	388
128. Solutions of a Differential Equation in the Neighborhood of a Point of Degeneration	388
129. Idealizations in Physical Problems	391
130. Critical Points of Differential Equations; Basic Assumption	392
131. Conditions of Mandelstam	395
132. Remarks Concerning Systems of Degenerate Differential Equations	396
Chapter XXI - Degenerate Systems With One Degree of Freedom	399
133. Periodic Solutions of Degenerate Systems of the First Order	399
134. Relaxation Oscillations in a Circuit Containing a Gaseous Conductor	400
135. RC-Multivibrator	402
136. System With One Degree of Freedom Describable By Two Differential Equations of the First Order	405
Chapter XXII - Multiply Degenerate Systems	410
137. Multivibrator of Abraham-Bloch	410
138. Heegner's Circuit; Analytic Trajectories	414
139. Transition Between Continuous and Discontinuous Solutions of Degenerate Systems	415
Chapter XXIII - Mechanical Relaxation Oscillations	417
140. Introductory Remarks	417
141. Qualitative Aspects of a Mechanical Relaxation Oscillation	418
142. Mechanical Relaxation Oscillations Caused By Non-Linear Friction	420
Chapter XXIV - Oscillations Maintained By Periodic Impluses	423
143. Introductory Remarks	423
144. Elementary Theory of the Clock	424
145. Phase Trajectories in the Presence of Coulomb Friction	427
146. Electron-Tube Oscillator With Quasi-Discontinuous Grid Control	430
147. Phase Trajectories of an Impulse-Excited Oscillator	433
Chapter XXV - Effect of Parasitic Parameters on Stationary States of Dynamical Systems	436
148. Parasitic Parameters	436
149. Influence of Parasitic Parameters on the State of Equilibrium of a Dynamical System	438
150. Effect of Parasitic Parameters on Stability of an Electric Arc	440
151. Effect of Parasitic Parameters on Stability of Relaxation Oscillations	443
References	131,246 278,446
Index	449
