

Contents

General Lectures

Bryson, Arthur E.: Control theory for random systems	1
Fraeijs de Veubeke, B.: The numerical analysis of structures	20
Lighthill, James: Aquatic animal locomotion	29
Novozhilov, V. V.: Perspective in phenomenological approach to the problem of fracture	47
Wieghardt, K.: Ship hydrodynamics	56

Sectional Lectures

Deribas, A. A.: Some phenomena accompanying high-speed collision of solids	72
Goldsmith, Harry L.: The microrheology of human erythrocyte suspensions	85
Guiraud, J.-P.: Gas dynamics from the point of view of kinetic theory	104
Hoff, Nicholas J.: Creep buckling of plates and shells	124
Ishlinsky, A. Yu.: On the dynamics of a system of rigid bodies	141
Koiter, W. T., Simmonds, J. G.: Foundations of shell theory	150
Landahl, M. T.: Drag reduction by polymer addition	177
Liepmann, H. W.: Experimental fluid mechanics: the impact of modern instrumentation	200
Longuet-Higgins, M. S.: The mechanics of the surf zone	213
Mansfield, E. H.: Inverse methods in two-dimensional elasticity	229
Melcher, J. R.: Electrohydrodynamics	240
Niordson, F. I., Pedersen, P.: A review of optimal structural design	264
Philip, J. R.: Flow in porous media	279
Rotta, J. C.: Turbulent shear layer prediction on the basis of the transport equations for the Reynolds stresses	295
Sedov, L.: High speed water motion	309
Vekua, I. N.: On two ways of constructing the theory of elastic shells	322
Vorovich, I. I.: The problem of non-uniqueness and stability in the non-linear mechanics of continuous media	340
Contributed papers, presented at the 13 th International Congress of Theoretical and Applied Mechanics	358
