

# Contents

<b>Introduction</b>	<b>1</b>
<b>1. The Physical Concept of Time</b>	<b>8</b>
<b>2. The Time Arrow of Radiation</b>	<b>12</b>
2.1 Retarded and Advanced Form of the Boundary Value Problem	14
2.2 Thermodynamical and Cosmological Properties of Absorbers	18
2.3 Radiation Damping	21
2.4 The Absorber Theory of Radiation	27
<b>3. The Thermodynamical Arrow of Time</b>	<b>31</b>
3.1 Derivation of Classical Master Equations	34
3.1.1 $\mu$ -Space Dynamics and Boltzmann's $H$ -Theorem	34
3.1.2 $\Gamma$ -Space Dynamics and Gibbs' Entropy	38
3.2 Zwanzig's General Formalism of Master Equations	46
3.3 Thermodynamics and Information	55
3.4 The Emergence of Order	63
<b>4. The Quantum Mechanical Arrow of Time</b>	<b>70</b>
4.1 The Formal Analogy: Pauli's Master Equation	71
4.2 Quantum Indeterminism and the Collapse of the Wave Function	78
4.2.1 Measurements and Quantum Correlations	82
4.2.2 The Emergence of Classical Properties	87
4.2.3 The Time Arrow in the Everett Interpretation	93
4.3 Exponential Decay and 'Causality' in Scattering Processes	99
<b>5. The Time Arrow of Spacetime Structure and Cosmology</b>	<b>104</b>
5.1 Thermodynamics of Black Holes	107
5.2 Cosmology and the Expansion of the Universe	122
5.2.1 Friedmann Cosmology and 'Intrinsic Time'	125
5.2.2 State Vector Reduction of the Vacuum	131

<b>6. The Quantization of Time</b>	134
6.1 Quantization of the Friedmann Universe	136
6.2 The ‘Emergence’ of Classical Time	143
<b>Epilogue</b>	149
<b>References</b>	153
<b>Subject Index</b>	163
