

CONTENTS

Preface	ix
List of Authors	xi
 Part I: Foundations of Numerical Schemes	
Convergence of numerical methods for conservation laws	<i>R. J. Diperna</i> 3
Upwind schemes using various formulations of the Euler equations	<i>P. L. Roe</i> 14
Some preliminary results using a large time step generalization of Godunov's method	<i>R. J. Leveque</i> 32
Flux limiters	<i>P. K. Sweby</i> 48
A high-resolution upwind scheme for quasi 1-D flows <i>M. Ben-Artzi and J. Falcovitz</i>	66
On a class of TVD schemes for gas dynamic calculations	<i>H. C. Yee, R. F. Warming and A. Harten</i> 84
A time discretization for conservation laws	<i>Y. Brenier</i> 108
On numerical schemes for solving Euler equations of gas dynamics	<i>A. Dervieux and G. Vijayasundaram</i> 121
The convection-projection approach towards the solution of Euler equations	<i>P. Morice</i> 145
A two-dimensional Lagrange-Euler technique for gas dynamics	<i>E. Le Gruyer and A. Y. Le Roux</i> 176
Part II: Steady State Calculations	197
Numerical solution of the Euler equations for compressible inviscid fluids	<i>A. Jameson</i> 199
Analysis of an implicit Euler solver	<i>V. Daru and A. Lerat</i> 246
Acceleration to a steady state for the Euler equations	<i>E. Turkel</i> 281
Relaxation methods for hyperbolic conservation laws	<i>B. Van Leer and W. A. Mulder</i> 312
Pseudo-unsteady systems for steady inviscid flow calculations	<i>H. Viviand</i> 334
Part III: Finite Element Methods	369
A one dimensional shock capturing finite element method and multi-dimensional gener- alization	<i>T. J. R. Hugues, M. Mallet, Y. Taki, T. E. Tezduyar and R. Zang</i> 371
Implicit finite element methods for the Euler equations	<i>B. Stoufflet</i> 409
Part IV: Incompressible flow calculations and special numerical techniques ..	435
Vortex-sheet capturing in numerical solution of the incompressible Euler equations	<i>A. Rizzi and L. E. Eriksson</i> 437
A sub-domain approach for the computation of compressible inviscid flows.	<i>J. P. Veillot and L. Cambier</i> 470
Part V: Physical applications	491
Simulation of the Kelvin-Helmholtz instability of a supersonic slip surface with the Piecewise-parabolic Method (PPM).	<i>P. R. Woodward</i> 493
