
Contents

Introduction	1
1. Dimensional Analysis and Similarity	13
1. Dimensions	13
2. Dimensional Analysis	17
3. Similarity	23
2. The Application of Dimensional Analysis to the Construction of Exact Special Solutions to Problems of Mathematical Physics. Self-Similar Solutions	31
1. Strong Thermal Waves	31
2. Strong Blast Waves	36
3. Self-Similarity. Intermediate Asymptotics	41
3. Modified Problem of an Instantaneous Heat Source: Self-Similar Solution of the Second Kind	47
1. Modified Problem of an Instantaneous Heat Source	47
2. Derivation of the Basic Equation	48
3. Direct Application of Dimensional Analysis to the Modified Problem of an Instantaneous Heat Source	50
4. Resolution of the Paradox. Self-Similar Intermediate Asymptotics. Nonlinear Eigenvalue Problem	52
5. Numerical Calculations	58
4. The Problem of a Strong Explosion with Energy Loss or Deposition at the Front of the Shock Wave and the Problem of an Impulsive Load: Self-Similar Solutions of the Second Kind	63
1. Statement of the Modified Problem of a Strong Explosion	63

2. Direct Application of Dimensional Analysis to the Modified Problem of a Strong Point Explosion	65
3. Resolution of the Paradox. Intermediate Asymptotics	67
4. Qualitative Investigation of a Nonlinear Eigenvalue Problem	71
5. Numerical Calculations	74
6. The Problem of an Impulsive Load	78
7. Numerical Calculations. Self-Similar Asymptotics	80
8. Self-Similar Limiting Solution	81
9. Laws of Conservation of Energy and Momentum in the Problem of an Impulsive Load	83
5. Classification of Self-Similar Solutions	87
1. Complete and Incomplete Self-Similarity	87
2. Self-Similar Solutions of the First and Second Kinds	92
6. Self-Similar Solutions and Progressive Waves	101
1. Solutions of Progressive-Wave Type	101
2. Burgers Shock Wave—Steady Progressive Wave of the First Kind	103
3. Flame—Steady Progressive Wave of the Second Kind	105
4. Nonlinear Eigenvalue Problem	111
7. Self-Similarity and Transformation Groups	115
1. Dimensional Analysis and Transformation Groups	115
2. The Boundary Layer on a Flat Plate	117
3. Limiting Self-Similar Solutions	120
4. Rotation of Fluid in a Cylindrical Container	122
8. The Spectrum of Exponents in Self-Similar Variables	127
9. Stability of Self-Similar Solutions	133
10. Self-Similar Intermediate Asymptotics of Some Linear Problems in the Theory of Elasticity and the Hydrodynamics of Ideal Fluids	145
1. The Problem of the Equilibrium of an Elastic Wedge under the Action of a Concentrated Couple Applied at Its Tip	145
2. The Sternberg–Koiter Paradox. Intermediate Asymptotics of the Non-Self-Similar Problem	147

3. The Use of Self-Similar Solutions for Estimating the Stiffness of a Wedge	155
4. The Flow of Ideal Incompressible Fluid in a Corner—Self-Similar Solution of the Second Kind	158
11. Self-Similarities of the First and Second Kind in the Theory of Turbulence. Homogeneous Isotropic Turbulence	161
1. The Problem of Turbulence	161
2. Homogeneous Isotropic Turbulence	163
3. The Decay of Homogeneous Isotropic Turbulence for Negligibly Small Third Moments	164
4. The Decay of Homogeneous Isotropic Turbulence for Finite Third Moments	167
5. Locally Isotropic Turbulence	177
12. Self-Similarities of the First and Second Kind in the Theory of Turbulence. Shear Flow	181
1. The Wall Region of a Turbulent Shear Flow	181
2. Similarity Laws for the Atmospheric Surface Layer	185
3. Similarity Laws for Flow in a Turbulent Wall Region with Adverse Pressure Gradient	189
4. Unsteady Phenomena in the Viscous Layer of a Turbulent Shear Flow	193
5. The Regime of Limiting Saturation of a Turbulent Shear Flow Loaded with Sediment	198
Epilogue	205
