

CONTENTS

Preface

xi

1 FIRST-ORDER PARTIAL DIFFERENTIAL EQUATIONS

1.1	First-Order Quasi-Linear Differential Equations	1
1.2	An Illustrative Example	7
1.3	First-Order Nonlinear Differential Equations	12
1.4	Examples—The Eikonal Equation—and More Theory	18
1.5	Propagation of Wave Fronts	27
1.6	Variable Index of Refraction	38
1.7	Higher Dimensions	42
	References	44

2 THE DIRAC DELTA FUNCTION, FOURIER TRANSFORMS, AND ASYMPTOTICS

2.1	The Dirac Delta Function and Related Distributions	45
2.2	Fourier Transforms	52
2.3	Fourier Transforms of Distributions	58
2.4	Multidimensional Fourier Transforms	61
2.5	Asymptotic Expansions	66
2.6	Asymptotic Expansions of Fourier Integrals with Monotonic Phase	73
2.7	The Method of Stationary Phase	77
2.8	Multidimensional Fourier Integrals	82
	References	89

viii Contents

3 SECOND-ORDER PARTIAL DIFFERENTIAL EQUATIONS

3.1	Prototype Second-Order Equations	92
3.2	Some Simple Examples	94
	References	99

4 THE WAVE EQUATION IN ONE SPACE DIMENSION

4.1	Characteristics for the Wave Equation in One Space Dimension	100
4.2	The Initial Boundary Value Problem	105
4.3	The Initial Boundary Value Problem Continued	109
4.4	The Adjoint Equation and the Riemann Function	120
4.5	The Green's Function	130
4.6	Asymptotic Solution of the Klein–Gordon Equation	133
4.7	More on Asymptotic Solutions	136
	References	144

5 THE WAVE EQUATION IN TWO AND THREE DIMENSIONS

5.1	Characteristics and Ill-Posed Cauchy Problems	145
5.2	The Energy Integral, Domain of Dependence, and Uniqueness	150
5.3	The Green's Function	153
5.4	Scattering Problems	158
	References	163

6 THE HELMHOLTZ EQUATION AND OTHER ELLIPTIC EQUATIONS

6.1	Green's Identities and Uniqueness Results	165
6.2	Some Special Features of Laplace's Equation	170
6.3	Green's Functions	174
6.4	Problems in Unbounded Domains and the Sommerfeld Radiation Condition	180
6.5	Some Exact Solutions	192
	References	202

7 MORE ON ASYMPTOTICS

7.1	Watson's Lemma	204
7.2	The Method of Steepest Descents: Preliminary Results	211
7.3	Formulas for the Method of Steepest Descents	225
7.4	The Method of Steepest Descents: Implementation	229
	References	240

**8 ASYMPTOTIC TECHNIQUES
FOR DIRECT SCATTERING PROBLEMS**

8.1 Scattering by a Half-Space: Analysis by Steepest Descents	241
8.2 Introduction to Ray Methods	257
8.3 Determination of Ray Data	268
8.4 The Kirchhoff Approximation	281
References	299

**9 INVERSE METHODS
FOR REFLECTOR IMAGING**

9.1 The Singular Function and the Characteristic Function	302
9.2 Physical Optics Far-Field Inverse Scattering (POFFIS)	312
9.3 The Seismic Inverse Problem	321
References	337

<i>Index</i>	339
