| EDITORIAL INTRODUCTION | xi |
| PREFACE TO SECOND EDITION | xiii |
| ACKNOWLEDGEMENTS | xv |
| CHAPTER ONE | |
| INTRODUCTION | 1 |
| Theory and experiment in fluid mechanics | 2 |
| Aeronautics and other branches of the subject | 3 |
| Relative motion | 4 |
| Historical development of fluid mechanics | 5 |
| Dimensional analysis | 6 |
| Units | 13 |
| The equations of motion | 16 |
| The Navier–Stokes equations | |
| Incompressible flow | |
| “Inviscid” flow and Bernoulli’s equation | |
| Shock waves | |
| The boundary-layer approximation | |
| The momentum integral equation | |
| Laminar flow | |
| Turbulent flow | |
| The Reynolds stresses | |
| Duct flow | |
| Compressible flow outside shear layers | |
| Departures from perfect-gas behaviour | |
| The different flow regimes | 34 |
| Categories of experimental work | 37 |
| Examples | 39 |
| CHAPTER TWO | |
| TUNNELS AND TEST RIGS | 40 |
| Wind tunnel layouts | 41 |
| Closed-circuit tunnels | |
| Open-circuit tunnels | |

| | |
|--|----|
| Pressure tunnels | |
| Power requirements and circuit arrangements | |
| Transonic and supersonic tunnels | |
| Diffusers | 47 |
| Subsonic diffusers | |
| Fans and compressors | 50 |
| Fan design methods | |
| Drive arrangements | |
| Intermittent-running tunnels | |
| Corners | 55 |
| Contractions and nozzles | 56 |
| Boundary-layer behaviour | |
| Effect of a contraction on velocity variations | |
| Nozzles for high speed tunnels | |
| Design of supersonic divergent nozzles | |
| Screens | 63 |
| Pressure-drop coefficients of screens | |
| Honeycombs | |
| Acceptable values of stream turbulence | |
| Condensation in high-speed tunnels | 67 |
| Shock tubes | 67 |
| Shock tunnels | |
| Reflected-shock tunnels | |
| “Tailored” operation | |
| Low-density tunnels | 73 |
| Examples | 75 |

CHAPTER THREE

FLUID VELOCITY AND SHEAR STRESS

| | |
|--|----|
| MEASUREMENTS | 76 |
| Pitot tubes | 76 |
| Corrections to the readings of Pitot tubes in non-uniform flow | |
| Static pressure measurements | 80 |
| Fluctuating pressure measurements | |
| Flow direction measurements | 83 |
| Flow quantity measurements | 84 |
| Fluctuating velocity measurements—the hot wire | |
| anemometer | 88 |
| Hot wire probes | |
| Compensation for thermal inertia of hot wires | |

| | |
|--|-----|
| Constant-temperature hot-wire operation | |
| The Doppler anemometer | |
| Recording techniques | |
| Measurement of very low velocities | 97 |
| Shear stress measurement | 99 |
| Surface Pitot tubes | |
| “Floating” surface elements | |
| Determination of surface friction from overall drag measurements | |
| Use of the momentum integral equation | |
| Examples | 104 |
| | |
| CHAPTER FOUR | |
| PRESSURE MEASUREMENTS AND MANOMETERS | 106 |
| Surface pressure measurements | 106 |
| Lag in connecting leads containing gases | 108 |
| Manometers and pressure gauges | 109 |
| U-tube manometers | |
| Betz manometer | |
| Reservoir U-tubes | |
| Multi-tube manometers | |
| Null-displacement manometers | |
| Chattock gauge | |
| Pressure transducers | |
| Measurement of low absolute pressures | |
| Pressure fluctuation measurements | |
| Examples | 118 |
| | |
| CHAPTER FIVE | |
| FORCE AND POSITION MEASUREMENTS | 119 |
| The null-displacement method | 119 |
| The strain method | 120 |
| Forces on tunnel models | 120 |
| Permanent wind tunnel balances | 122 |
| Resolution of forces | |
| Balance linkages | |
| Weighbeams | |
| Model supports | |
| Strain balances | 127 |
| Resistance strain gauges | |
| Resolution of forces | |

| | |
|--|-----|
| Temperature sensitivity | |
| Frequency response | |
| Tunnel interference | 131 |
| Solid blockage | |
| Wake blockage | |
| Tunnel wall boundary-layer blockage | |
| Lift interference | |
| Aspect ratio corrections | |
| Corrections to surface pressure distributions | |
| Permissible model size for a given tunnel | |
| Position measurements | 140 |
| Automatic data recording and digital processing | 141 |
| Examples | 144 |
| | |
| CHAPTER SIX | |
| FLOW VISUALIZATION | 145 |
| Streamlines of the external stream | 145 |
| Streamlines of the surface flow | 148 |
| Surface friction | 149 |
| Extent of turbulent mixing regions | 150 |
| Shock wave or expansion fan position | 150 |
| Flow visualization techniques and interpretation | 151 |
| Tufts | |
| "Smoke" or dye | |
| Line tracers | |
| Oil films | |
| China clay | |
| Shadowgraph or direct-shadow method | |
| Schlieren method | |
| Interferometer | |
| Examples | 163 |
| | |
| CHAPTER SEVEN | |
| THE PLANNING AND REPORTING OF | |
| EXPERIMENTS | 164 |
| Planning of experiments | 164 |
| The experimental programme | |
| Experimental errors | |
| Overall accuracy | |

CONTENTS

ix

| | |
|--|-----|
| Report writing | 171 |
| Curve fitting | |
| Style | |
| CHAPTER EIGHT | |
| SPECIALIZED BRANCHES OF FLUID MECHANICS | 177 |
| Aeronautics | 177 |
| Chemical engineering | 180 |
| Oceanography | 182 |
| Physiology | 184 |
| Civil engineering | 185 |
| Heat transfer and combustion | 187 |
| Hydraulics and naval architecture | 191 |
| Meteorology | 193 |
| Turbomachinery and duct flows | 197 |
| Journals | 199 |
| NOTATION | 204 |
| ANSWERS TO EXAMPLES | 206 |
| REFERENCES | 210 |
