Preface	v
List of programs	ix
<i>CHAPTER 1 PROPERTIES OF FLUIDS</i>	
1.1 Introduction	1
1.2 Basic definitions	2
1.3 Hydrostatic pressure	8
1.4 Hydrostatic pressure forces on submerged bodies	10
1.5 Buoyancy	13
<i>CHAPTER 2 BASIC CONCEPTS OF FLUIDS IN MOVEMENT</i>	
2.1 Introduction	15
2.2 Pathlines and streamlines	17
2.3 Continuity equation	17
2.4 Bernouilli's equation	18
2.5 Applications of Bernouilli's equations	20
2.6 The momentum equation for steady flow	28
2.7 Applications of the momentum equation	29
2.8 Flow along a curvilinear path	30
2.9 Behaviour of real fluids	35
2.10 Dimensionless numbers	40
<i>CHAPTER 3 PIPE FLOW</i>	
3.1 Introduction	44
3.2 Turbulent flow: Darcy–Weisbach formula	47
3.3 Effects of rugosity in turbulent flow	49
3.4 Empirical formulae	51
3.5 Summary of formulae	56
<i>CHAPTER 4 PIPE NETWORKS</i>	
4.1 Introduction	59
4.2 Energy losses	60
4.3 Element analysis	61
4.4 Element matrix equation	63
4.5 Total system of equations	63
4.6 Boundary conditions	68
4.7 Solution of the system of equations and evaluation of results	69
4.8 Computer program for the linear analysis of pipe networks	73

4.9	Non-linear analysis of pipe networks	99
4.10	Program for non-linear analysis of pipe networks	103
<i>CHAPTER 5 OPEN CHANNEL FLOW</i>		
5.1	Introduction	122
5.2	Basic principles of uniform flow	122
5.3	Chezy and Manning formulae	125
5.4	Optimum hydraulic section for uniform flow	128
5.5	Program for computation of depth of flow	129
5.6	Non-uniform flow	134
5.7	The analysis of open channel flow	143
<i>CHAPTER 6 POTENTIAL FLOW</i>		
6.1	Introduction	148
6.2	Euler's equations of motion	150
6.3	Irrotational flow	153
6.4	Integration of Euler's equations	155
6.5	Stream function formulation	156
6.6	Flow nets	158
6.7	Some flow nets for two-dimensional flow	159
6.8	Finite element solution of potential flow problems	172
6.9	Finite element computer program for the solution of the Laplace equation	183
6.10	Boundary element solution of potential flow problems	195
6.11	Boundary element program for the solution of the Laplace equation	203
<i>CHAPTER 7 NAVIER-STOKES EQUATIONS</i>		
7.1	Introduction	216
7.2	Equilibrium equations	219
7.3	Constitutive equations: Newtonian fluids	221
7.4	Navier-Stokes equations for incompressible Newtonian fluid	223
7.5	Turbulence	224
7.6	Applications	226
<i>CHAPTER 8 TURBOMACHINERY</i>		
8.1	Introduction	231
8.2	Basic theory	231
8.3	Impulse turbines	244
8.4	Characteristic curves	248
8.5	Specific speed	251
8.6	Cavitation	254
	Solutions	260
	Index	288
