Preface xv

Chapter 1	INTRODUCTION	1
1.1	What Are Shear Layers?	1
1.1.1	Idealized Examples of Shear Layers	1
1.1.2	Practical Examples of Shear Layers	3
1.1.3	Laminar and Turbulent Flow	4
1.2	Importance of Shear Layers	5
1.3	Behavior of Shear Layers—Preliminary Discussion	8
	Problems	21
Chapter 2	THE CONTINUITY AND MOMENTUM EQUATIONS OF FLUID FLOW	22
2.1	Conservation or “Transport” Equations	22
2.2	The Continuity Equation (Principle of Conservation of Mass)	23
2.3	The Momentum Equation (Navier-Stokes Equation)	26
2.4	Turbulent Flow	33
2.5	Vorticity	36
	Problems	38
Chapter 3	THIN-SHEAR-LAYER EQUATIONS	39
3.1	Thin-Shear-Layer Approximation in Two-Dimensional Flow	39
3.2	Axisymmetric and Three-Dimensional Flows	45
3.3	The Mangler Transformation	48

3.4	Integral Equations for Thin or Axisymmetric Shear Layers	50
3.4.1	The Momentum Integral Equation	53
3.4.2	The Entrainment Equation	53
3.5	“Fairly Thin” Shear Layers	55
3.6	Low-Reynolds-Number Flows	55
	Problems	57
Chapter 4	TOOLS	58
4.1	Dimensional Analysis	59
4.2	Ordinary Differential Equations and Their Boundary Conditions	60
4.2.1	Basic Theory	60
4.2.2	A Shooting Method Using the Runge-Kutta Integration Procedure	62
4.2.3	Fortran Program for Solving Falkner-Skan Equation	65
4.3	Partial Differential Equations and Their Boundary Conditions	69
4.3.1	Types of Partial Differential Equations	69
4.3.2	Boundary Conditions—Generalities	73
4.3.3	Boundary Conditions for Fluid Flow Problems	73
4.3.4	Numerical Solution of Partial Differential Equations	79
4.4	A Caution	81
	Problems	81
Chapter 5	ANALYSIS OF LAMINAR SHEAR LAYERS	84
5.1	Formulation of Laminar-Flow Problems	84
5.2	Similarity Concept in Laminar Shear Layers	86
5.3	Falkner-Skan Transformation for External Boundary Layers	92
5.4	Similar Flows for Laminar Boundary Layers	95
5.5	Similar Solutions of the Falkner-Skan Equation for Positive Wall Shear	97

5.6	Calculation Methods for Nonsimilar Flows	104
5.6.1	Pohlhausen's Method	105
5.6.2	Thwaites' Method	108
5.6.3	Fortran Program for Thwaites' Method	112
5.7	Laminar Internal Flows	116
5.7.1	Entrance-Region Flow in Symmetrical Ducts	117
5.7.2	Fully Developed Flows	123
5.8	Free Shear Layers	128
5.8.1	Axisymmetric Jet	128
5.8.2	Two-Dimensional Wake	133
5.8.3	Mixing Layer between Two Uniform Streams	136
5.8.4	Power Laws for Width and for Centerline Velocity of Similar Free Shear Layers	139
	Problems	140
Appendix 5A: Görtler Series Method		148
Chapter 6	ANALYSIS OF TURBULENT SHEAR LAYERS	153
6.1	Introduction	153
6.2	Composite Nature of a Turbulent Boundary Layer	160
6.3	Eddy-Viscosity and Mixing-Length Concepts	164
6.4	Mean-Velocity Distribution on Smooth Surfaces	171
6.5	Mean-Velocity Distribution on Rough Surfaces	176
6.6	Mean-Velocity Distribution with Surface Mass Transfer	180
6.7	Turbulent Boundary Layers on Smooth and Rough Surfaces with Zero Pressure Gradient	184
6.7.1	Smooth Flat Plate	184
6.7.2	Rough Flat Plate	189
6.8	Turbulent Boundary Layers with Pressure Gradient: Head's Method	192
6.8.1	Fortran Program for Head's Method	194

6.9	Turbulent Internal Flows	197
6.9.1	Fully Developed Pipe Flows on Smooth Surfaces	198
6.9.2	Fully Developed Pipe Flow on Rough Surfaces	200
6.10	Free Shear Layers	204
6.10.1	The Axisymmetric Jet	204
6.10.2	Two-Dimensional Wake	207
6.10.3	Power Laws for the Width and the Centerline Velocity of Similar Free Shear Layers	210
	Problems	210
Chapter 7	NUMERICAL METHODS FOR THIN SHEAR LAYERS	213
7.1	Introduction	213
7.2	Numerical Formulation of Momentum Equation for External Flows	214
7.2.1	Newton's Method	217
7.3	Numerical Formulation of Momentum Equation for Internal Flows	218
7.3.1	Difference Equations for the Standard Problem When the Momentum Equation Is Expressed in Transformed Variables	220
7.3.2	Difference Equations for the Standard Problem When the Momentum Equation Is Expressed in Physical Variables	221
7.3.3	Variational Equations	223
Appendix 7A:	Block Elimination Method	223
7A.1	Solution of the Difference Equations of the Momentum Equation for External Flows	223
7A.2	Fortran Program for the Block Elimination Method	230
Appendix 7B:	Newton's Method for Internal Flows	232
7B.1	Solution of the Difference Equations of the Momentum Equation for Internal Flows	233

Chapter 8	NUMERICAL SOLUTIONS OF LAMINAR AND TURBULENT BOUNDARY LAYERS	235
8.1	Introduction	235
8.2	External Laminar Boundary Layers	237
8.2.1	Two-Dimensional Similar Flows	237
8.2.2	Two-Dimensional Nonsimilar Flows	239
8.2.3	Axisymmetric Flows	242
8.3	External Turbulent Boundary Layers	245
8.3.1	Two-Dimensional Flows	248
8.3.2	Axisymmetric Flows	250
8.4	Internal Turbulent Flows	253
8.5	A Transport-Equation Model of Turbulence	255
Appendix 8A:	Fortran Program for Solving TSL Equations for Two-Dimensional Laminar and Turbulent Boundary Layers	258
8A.1	General Description of the Method	258
8A.1.1	Main	259
8A.1.2	Subroutine Input	260
8A.1.3	Subroutine Grid	261
8A.1.4	Subroutine IVPL	262
8A.1.5	Subroutine Growth	262
8A.1.6	Subroutine Eddy	263
8A.1.7	Subroutine CMOM	265
8A.1.8	Subroutine Output	266
8A.2	Description of Input	268
Appendix 8B:	Solution of Third-Order Ordinary or Parabolic Partial Differential Equations	271
Chapter 9	STABILITY AND TRANSITION	281
9.1	Introduction	281
9.2	Small-Disturbance Equations	282
9.3	Orr-Sommerfeld Equation	285
9.3.1	Boundary Conditions	286
9.4	Properties of the Orr-Sommerfeld Equation	288

9.5	Numerical Solution of the Orr-Sommerfeld Equation	290
9.5.1	Computation of the Eigenvalues and Eigenfunctions	293
9.5.2	Results for Plane Poiseuille Flow	295
9.5.3	Results for Blasius Flow	297
9.6	Natural Transition	301
9.6.1	Transition Process	301
9.6.2	Empirical Correlations for Natural Transition	305
9.7	Promotion of Transition by Free-Stream Turbulence or Surface Roughness	309
Chapter 10	THREE-DIMENSIONAL AND UNSTEADY FLOWS	315
10.1	Boundary Sheets, Boundary Regions, and Unsteady Flows	315
10.1.1	Boundary Sheets	315
10.1.2	Boundary Regions	317
10.1.3	Secondary Flow	319
10.1.4	Separation of Three-Dimensional Boundary Layers	321
10.2	Numerical Solutions for Three-Dimensional Laminar Flows	324
10.2.1	Transformation of the Equations	325
10.2.2	Numerical Formulation of the Attachment-Line Equations	328
10.2.3	Numerical Formulation of the Three-Dimensional TSL Equations	330
10.2.4	Sample Calculation	331
10.3	Turbulence Models for Three-Dimensional Flows	332
10.3.1	Boundary Sheets	332
10.3.2	Boundary Regions	336
10.4	Numerical Solutions for Three-Dimensional Turbulent Flows (Boundary Sheets)	337

10.4.1	Infinite Swept-Wing Calculations	337
10.4.2	Three-Dimensional Flows in Cartesian Coordinates	340
10.5	Numerical Solutions for Unsteady Flows	342
10.5.1	Oscillatory Boundary Layers for Laminar and Turbulent Flows	343
10.5.2	Boundary-Layer Motion Started Impulsively from Rest	348
Chapter 11	COMPLEX SHEAR LAYERS AND VISCOUS/INVISCID INTERACTIONS	353
11.1	Complex Shear Layers	354
11.1.1	Interactions between Shear Layers	354
11.1.2	Distorted Shear Layers	357
11.2	Viscous/Inviscid Interactions	359
11.2.1	Interaction of Thin Shear Layers with an External Inviscid Flow	359
11.2.2	The Triple-Deck Model for Strongly Perturbed Boundary Layers	363
11.2.3	Physics of Separation Bubbles	366
11.3	Inverse Boundary-Layer Calculations	367
11.3.1	Mechul Function Approach	368
11.3.2	Calculated Results for Flows with Prescribed Displacement Thickness	371
11.4	Explanation of the Frontispiece	371
