CONTENTS

Preface v

Chapter 1. Structure and Properties of Porous Materials 1
1.10 Structure and Classification 1
1.20 Structure and Properties 2
1.30 Porosity 3
1.31 Porosity and Structure 3
1.32 Effects of Consolidation and Compaction on Porosity 5
1.33 Measurement of Porosity 7
1.40 Specific Surface 9
1.41 Measurement of Specific Surface 9
1.50 Permeability 10
1.51 Structural Interpretation of Permeability 11
1.52 Factors Affecting the Permeability of Porous Materials 13
1.60 Typical Values of Porosity, Permeability and Specific Surface. 14
1.70 Porosity and Permeability Distributions in Naturally Porous Materials 14
1.80 Mechanical Properties of Porous Materials 19
Exercises 20
References 21

Chapter 2. Statics of Fluids in Porous Media 22
2.10 Fluid Saturations 22
2.11 Measurement of Fluid Saturations 22
2.20 Capillary Pressure 23
2.21 Capillary Pressure-Saturation Relationship 25
2.22 Measurement of Capillary Pressure 26
2.23 Capillary Hysteresis 29
2.24 Irreducible Saturation (Connate Water) 30
2.25 The Leverett j-Function 31
2.30 Pore-Size Distribution 31
2.40 Vapor Pressure of Fluids in Porous Media 33
2.41 Measurement of Vapor Pressure-Saturation Curves 35
2.50 Heat of Wetting and Heat of Swelling 36
2.60 Electrical Properties of Fluid-filled Porous Materials 38
2.70 Osmosis 41

2.80 Electrochemical Potentials 41
2.90 Static Fluid Distributions in Porous Materials 42
Exercises 46
References 46

Chapter 3. Physical and Mathematical Theory of Flow 47
3.10 Mechanisms and Types of Flow 47
3.11 Laminar Viscous Flow through Porous Media 47
3.12 Turbulent Flow through Porous Media 51
3.13 Simultaneous Laminar Flow of Immiscible Fluids through Porous Media 53
3.14 Streaming Potential and Electro-Osmosis 56
3.15 Thermo-Osmosis 58
3.20 Limitations of Classical Hydrodynamics 58
3.30 Differential Form of Darcy's Law 58
3.31 Simultaneous Flow of Immiscible Fluids through Porous Media; Relative Permeability 60
3.32 Darcy's Law for Anisotropic Porous Media 62
3.40 Equations of State for Fluids 65
3.50 The Continuity Equation 66
3.60 The Differential Equations of Fluid Flow through Porous Materials 69
3.70 Boundary Conditions 74
Exercises 76
References 76

Chapter 4. Steady Laminar Flow of Homogeneous Fluids 77
4.10 The Steady-State Regime 77
4.20 Linear Flow and the Measurement of Permeability 77
4.30 Horizontal Plane Flow in Homogeneous Media; Mathematical Formulation 80
4.31 The Stream Function and Complex Potential 82
4.32 Radial Flow between Concentric Circular Cylinders 86
4.33 Conformal Mapping 88
4.34 The Schwarz-Christoffel Transformation; Conformal Mapping of a Rectangle 91
4.40 Transverse Permeabilities of Cylindrical Cores 93
4.50 Sources and Sinks 98
4.51 System of Wells Near a Plane Discontinuity in Medium; the Method of Images 102
4.60 Gravity Drainage: Free Surfaces 105

Exercises ... 106
References ... 107

Chapter 5. Transient Laminar Flow of Homogeneous Fluids 108
5.10 Transient Flow of Compressible Liquids ... 108
5.20 The Laplace Transform and Duhamel's Theorem ... 109
5.30 Sources and Sinks; the Method of Images ... 113
5.40 Pressure Build-up Tests in Oil Wells ... 116
5.50 Performance of Water-Drive Reservoirs ... 123
5.51 The Infinite Linear Aquifer ... 125
5.52 The Infinte Radial Aquifer ... 128
5.53 The Tilted Aquifer ... 129
5.60 Flow of an Ideal Gas, Numerical Integration ... 133
Exercises ... 137
References ... 138

Chapter 6. Simultaneous Flow of Immiscible Fluids 139
6.10 Steady Linear Flow and the Measurement of Relative Permeability; the Boundary Effect ... 139
6.20 Immiscible Displacement; The Buckley-Leverett Equation ... 142
6.21 The Welge Integration of the Buckley-Leverett Equation; The Calculation of Relative Permeabilities from Displacement Data ... 149
6.30 Linear Immiscible Displacement Including the Effects of Capillary Pressure ... 152
6.40 Imbibition ... 161
6.50 Multi-dimensional Two-phase Flow: Numerical Solutions ... 167
6.60 Turbulent Flow of Immiscible Fluids ... 168
Exercises ... 168
References ... 169

Chapter 7. Moving Boundary Problems; Displacement; Deposition of Solids 170
7.10 Displacement of One Fluid by Another ... 170
7.11 Analytical Solution of the Linear Displacement Problem ... 173
7.20 Two-Dimensional Displacement and Waterflood Sweep Patterns for Unit Mobility Ratio ... 175
7.21 The Effect of Mobility-Ratio on Areal Sweep Efficiency ... 187
7.30 Filtration and the Deposition of Solids ... 189
7.40 Frontal Instability and Viscous Fingering ... 196
Exercises ... 200
References ... 200

Chapter 8. Simultaneous Laminar Flow of Miscible Fluids 201
8.10 Miscible and Immiscible Fluids, Fick's Law of Diffusion.... 201
8.20 Miscible Displacement in a Capillary Tube..... 202
8.30 Miscible Displacement in Porous Media..... 207
8.31 Theory of Dispersion in Porous Media..... 209
8.40 Macroscopic Features of Miscible Displacement..... 212
8.50 Turbulent Flow of Miscible Fluids..... 214
Exercises..... 215
References..... 215

Chapter 9. Theory of Models 217
9.10 The Concept of Similarity..... 217
9.20 Basic Theory of Models..... 218
9.30 Scaled Models and Scaling Laws..... 221
9.40 Examples of Scaling Analysis When the Equations for the System are Known..... 222
9.50 Example of Analog Construction..... 229
9.60 Example of Scaling When the Equations for the System are not Known..... 232
9.70 Partial Similarity in Scaled Models..... 235
9.80 Special Aspects of Model Scaling for Porous Media..... 238
9.90 Results of Model Studies of Flow Through Porous Media... 239
Appendix..... 240
Exercises..... 240
References..... 241

Chapter 10. Flow with Change of Phase 242
10.10 Flow With Change of Phase; Solution-Gas Drive..... 242
10.20 Phase Equilibrium..... 242
10.30 Supersaturation and Undersaturation..... 250
10.40 Formulation of the Solution-Gas Drive Process..... 253
10.50 Second Formulation of the Solution-Gas Drive Process..... 256
10.60 Third Formulation of the Solution-Gas Drive Process; The Material Balance Equations..... 259
10.70 Flow with Change of Phase; General Procedures..... 262
Exercises..... 263
References..... 263
Index..... 264
