

TABLE OF CONTENTS

FOREWORD	v
CHAPTER I. MOLECULAR DIFFUSION	
1.1. Introduction	1
1.2. Concentration	1
1.3. Flux	2
1.4. Fick's Law	4
1.5. Conservation of Mass	5
1.6. Instantaneous Plane Source	7
1.7. Some Simple Examples	9
1.8. Diffusion of Finite Size Cloud	11
1.9. 'Reflection' at Boundary	13
1.10. Two- and Three-Dimensional Problems	14
1.11. Continuous Sources	16
1.12. Source in Uniform Wind	17
Appendix to Chapter I	19
Exercises	21
References	22
CHAPTER II. STATISTICAL THEORY OF DIFFUSION AND BROWNIAN MOTION	
2.1. Introduction	23
2.2. Dispersion Through Random Movements	23
2.3. Diffusion with Stationary Velocities	25
2.4. Brownian Motion	27
2.5. Dispersion of Brownian Particles	29
2.6. Simple Random Walk Model	30
2.7. Reflecting Barrier	35
2.8. Absorbing Barrier	36
2.9. Connection of Random Walk to Diffusion Equation	38
2.10. Deposition on Vertical Surfaces	40
2.11. Deposition on Horizontal Surfaces	42
Exercises	44
References	45

**CHAPTER III. TURBULENT DIFFUSION: ELEMENTARY STATISTICAL
THEORY AND ATMOSPHERIC APPLICATIONS**

3.1. Fundamental Concepts of Turbulence	46
3.2. Field Measurements of Concentration and Dosage	48
3.3. The Statistical Approach to Environmental Diffusion	50
3.4. 'Lagrangian' Properties of Turbulence	52
3.5. Consequences of Taylor's Theorem	54
3.6. The Form of the Particle-Displacement Probability Distribution	57
3.7. Mean Concentration Field of Continuous Sources	58
3.8. Apparent Eddy Diffusivity	61
3.9. Application to Laboratory Experiments	65
3.10. Application to Atmospheric Diffusion	66
3.11. Initial Phase of Continuous Plumes	68
3.12. Atmospheric Cloud Growth far from Concentrated Sources	72
3.13. The Non-Stationary Character of Atmospheric Turbulence	75
3.14. The Hay-Pasquill Method of Cloud-Spread Prediction	76
Exercise	80
References	81

CHAPTER IV. 'RELATIVE' DIFFUSION AND OCEANIC APPLICATIONS

4.1. Experimental Basis	82
4.2. Mean Concentration Field in a Frame of Reference Attached to the Center of Gravity	85
4.3. Probability Distributions of Particle Displacements	87
4.4. Kinematics of Particle Movements in a Moving Frame	91
4.5. Phases of Cloud Growth	93
4.6. History of a Concentrated Puff	94
4.7. Initially Finite Size Cloud	97
4.8. Use of the Diffusion Equation	98
4.9. Horizontal Diffusion in the Ocean and Large Lakes	100
4.10. Application to Diffusion of Sewage Plumes	103
4.11. Vertical Diffusion in Lakes and Oceans	106
Exercise	109
References	109

CHAPTER V. DISPERSION IN SHEAR FLOW

5.1. Introduction	111
5.2. Properties of the Planetary Boundary Layer	112
5.3. Particle Displacements in a Wall Layer	115
5.4. Continuous Ground-Level Line Source	118
5.5. Flux and Eddy Diffusivity	122

5.6. Comparison with Experiment	126
5.7. Continuous Point Source at Ground Level	129
5.8. Use of the Diffusion Equation	132
5.9. Elevated Sources	134
5.10. Longitudinal Dispersion in Shear Flow	136
5.11. Shear-Augmented Diffusion in a Channel	140
5.12. Dispersion in Natural Streams	143
5.13. Shear-Augmented Dispersion in Unlimited Parallel Flow	145
5.14. Diffusion in Skewed Shear Flow	148
References	154

CHAPTER VI. EFFECTS OF DENSITY DIFFERENCES ON ENVIRONMENTAL DIFFUSION

6.1. Introduction	156
6.2. Fundamental Equations	156
6.3. Approximate Forms of the Equations	158
6.4. Equations for Turbulent Flow	161
6.5. Turbulent Energy Equation	163
6.6. Diffusion Floors and Ceilings	165
6.7. Diffusion in a Continuously Stratified Fluid	167
6.8. Velocity Autocorrelation and Particle Spread in Stratified Fluid Model	170
6.9. Bodily Motion of Buoyant and Heavy Plumes	175
6.10. Dynamics of a Line Thermal	178
6.11. Similarity Theory	181
6.12. Bent-Over Chimney Plumes	185
6.13. Theory of Buoyancy Dominated Plumes in a Neutral Atmosphere	190
6.14. Comparison with Observation	193
6.15. Flow Pattern within a Plume	196
6.16. Effect of Atmospheric Stratification	201
6.17. Approximate Arguments for Plumes in Stratified Surroundings	204
6.18. Engineering Assessment of Ground Level Pollution from Buoyancy Dominated Plumes	208
6.19. Effects of Plume Rise on Ground-Level Concentration	211
Appendix to Chapter VI	217
A6.1. Momentum Plumes	217
Exercise	220
References	221

CHAPTER VII. THE FLUCTUATION PROBLEM IN TURBULENT DIFFUSION

7.1. Introduction	222
7.2. Probability Distribution of Concentration	223

7.3. The Functional Form of the Probability Distribution	225
7.4. Hazard Assessment on the Basis of Concentration Probabilities	227
7.5. The Variance of Concentration Fluctuations	233
7.6. Self-Similar Fluctuation Intensity Distribution	236
7.7. Fluctuating Plume Model	242
References	248
