Contents

Preface v

CHAPTER 1 ONE-DIMENSIONAL FLOW

1.1 Introduction 1
1.2 Eulerian Method 3
1.2.1 Flow along a Stream Tube 3
1.2.2 Buoyancy Effect 6
1.3 The Pressure Equation 7
1.3.1 Pitot Tubes 7
1.3.2 Venturi Tube 9
1.3.3 Manometer Readings 10
1.3.4 Assessment of 'Incompressible' Assumption 11
1.4 Euler's Momentum Theorem for Steady Motion 12
1.4.1 Force on a Stream Tube 12
1.4.2 Sudden Enlargement of a Pipe 14
Problems 15

CHAPTER 2 GENERAL EQUATIONS OF MOTION

2.1 Introduction 18
2.1.1 Acceleration Vector 18
2.1.2 Moving Axes 19
2.2 The Equations of Motion of an Inviscid Fluid 21
2.2.1 Rate of Change of Fluid Characteristics 21
2.2.2 Continuity of Mass Flow 23
2.2.3 Euler's Equation of Motion 24
2.3 Irrotational Motion 25
2.3.1 Bernoulli's Equation 25
2.3.2 Persistence of Irrotational Motion 27
2.3.3 Irrotational Motion—Pictorial Description 29
2.3.4 Motion of a Fluid Element 29

2.4 Boundary Conditions 32
2.5 Uniqueness 32
2.5.1 Kinetic Energy 32
2.5.2 Uniqueness Theorem 33
2.6 Euler's Momentum Theorem 34
2.6.1 Force Exerted on Fixed Bodies 34
2.6.2 Theorem of Moment of Momentum 37
Problems 39

CHAPTER 3 TWO-DIMENSIONAL MOTION

3.1 Introduction 42
3.2 Two-Dimensional Functions 43
3.2.1 Stream Function 43
3.2.2 Velocity Potential 44
3.2.3 Complex Potential 45
3.2.4 Indirect Approach 46
3.2.5 Inverse Function 46
3.3 Basic Singularities 47
3.3.1 Source 47
3.3.2 Doublet, Double Source or Dipole 48
3.3.3 Vortex 49
3.3.4 Mixed Flow 50
3.4 Rankine Technique 52
3.4.1 Source + Sink 53
3.4.2 Source + Sink + Uniform Stream 54
3.4.3 Stagnation Streamline 54
3.5 Method of Images 55
3.5.1 Circle Theorem 56
3.5.2 Flow Past Circular Cylinder with Circulation 57
3.5.3 Image of a Doublet in a Circular Cylinder 59
3.6 Conformal Transformation 60
3.6.1 Transformation of Flow Field 62
3.6.2 Transformation of Source 63
3.6.3 Transformation of Doublet 64
3.7 The Aerofoil 65
3.7.1 The Joukowski Transformation 65
3.7.2 Thin Aerofoils 66
3.7.3 Joukowski's Hypothesis 67
3.7.4 Blasius's Theorem 69

3.7.5 Lift Force 70
3.8 Potential Field Mapping 72
3.8.1 Schwartz–Christoffel Theorem 73
3.8.2 Semi-Infinite Strip 74
3.8.3 Infinite Strip 75
3.9 Auxiliary Mapping Functions 76
3.9.1 Zhukovski Function 76
3.9.2 Kirchhoff Function 79
3.10 Electrical Analogue 83
3.10.1 Boundary Conditions 84
3.10.2 Representation of Circulation 85
Problems 86

CHAPTER 4 IRROTATIONAL MOTION IN THREE DIMENSIONS

4.1 Introduction 91
4.2 Laplace's Equation 91
4.2.1 Spherical Harmonics 91
4.2.2 Axially Symmetric Field 92
4.2.3 Stokes's Stream Function 93
4.2.4 Motion of a Sphere 95
4.2.5 Pressure Distribution 95
4.2.6 Drag Force 97
4.3 Axial Distributions of Sources and Doublets 99
4.3.1 Continuous Distributions 99
4.3.2 Flow near Axis due to Sources 101
4.3.3 Flow near Axis due to Doublets 102
4.4 Slender Bodies of Revolution 103
4.4.1 Slender Body of Revolution in Uniform Stream 104
4.4.2 Nose-up Pitching Moment 106
4.5 Motion Regarded as due to Sources and Doublets 108
4.5.1 Green's Theorem and its Interpretation 108
4.5.2 Surfaces of Discontinuity 110
4.6 Alternative Representation 111
4.6.1 Vortex Sheets 111
4.6.2 Vortex Density 114
4.6.3 Induced Velocity 116
4.6.4 Induced Drag 117
Problems 119

CHAPTER 5 DYNAMICS OF REAL FLUIDS

5.1 Introduction 123
5.1.1 Viscosity and Reynolds Number 123
5.1.2 Influence of Reynolds Number upon Flow Configuration 125
5.1.3 Real and Ideal Fluids 127
5.1.4 Drag in a Real Fluid 131
5.1.5 Secondary Flow 134
5.2 The Equations of Motion for Viscous Flow 135
5.2.1 The Stress Tensor in a Viscous Fluid 135
5.2.2 The Navier–Stokes Equations 138
5.2.3 Vorticity and Circulation in a Viscous Fluid 149
5.3 Some Exact Solutions of the Navier–Stokes Equations 151
5.3.1 Steady Flow through an Arbitrary Cylinder under Pressure 152
5.3.2 Steady Couette Flow between Cylinders in Relative Motion 156
5.3.3 Steady Flow between Parallel Planes 157
5.3.4 Flow due to a Rotating Disc 160
5.3.5 Some Solutions for Unsteady Flows 165
5.4 Very Slow Motion 167
5.4.1 Stokes's Flow 167
5.4.2 Oseen Flow 171
Problems 172

CHAPTER 6 THE LAMINAR BOUNDARY LAYER IN INCOMPRESSIBLE FLOW

6.1 Introduction 175
6.1.1 The Concept of the Boundary Layer 175
6.1.2 Boundary-Layer Separation 179
6.2 The Boundary Layer Equations 181
6.2.1 Two-dimensional Flow along a Plane Wall 181
6.2.2 Flow along a Curved Surface 183
6.2.3 Some Important Boundary-Layer Characteristics 184
6.2.4 Integral Equations of the Boundary Layer 187
6.2.5 Von Mises Transformation 190
6.3 Analytic Solutions of the Boundary Layer Equations 191
6.3.1 Flow Parallel to a Semi-infinite Flat Plate 192
6.3.2 Flow near to the Stagnation Point of a Cylinder 196

6.3.3 The Falkner–Skan Solutions 198
6.3.4 Solution for a Linearly Decreasing External Velocity 199
6.3.5 Solution for a Flow with Stagnation Point and Separation 203
6.4 Practical Methods of Solving the Boundary-Layer Equations 207
6.4.1 Pohlhausen's Method 207
6.4.2 Thwaites's Method 211
6.4.3 Stratford's Method 217
6.5 Some Miscellaneous Boundary-Layer Problems 223
6.5.1 Flow in Laminar Wakes and Jets 223
6.5.2 Boundary Layers with Suction 226
6.5.3 Flow in a Converging Channel 228
Problems 229

CHAPTER 7 TURBULENT FLOW

7.1 Introduction 232
7.1.1 The Mechanism of Transition to Turbulence 233
7.1.2 The Essential Characteristics of Turbulence 235
7.1.3 Reynolds Equations for Turbulent Motion 236
7.1.4 Turbulent Flow between Parallel Planes 238
7.2 Mixing-Length Theories of Turbulence 240
7.2.1 Prandtl's Momentum-Transfer Theory 240
7.2.2 The Mean Velocity in a Two-Dimensional Turbulent Jet 241
7.2.3 The Limitations of Mixing-Length Theories 244
7.3 Turbulent Boundary Layers 244
7.3.1 The Two-Dimensional Turbulent Boundary Layer 244
7.3.2 Flow in the Absence of Pressure Gradient 249
7.3.3 General Calculations of Boundary-Layer Development 251
7.3.4 Flow near to Separation: Stratford's Analysis 256
7.4 Correlation Theory of Homogeneous Turbulence 261
7.4.1 Theoretical Deductions from the Navier–Stokes Equations 262
7.4.2 Isotropic Turbulence 265
7.4.3 Eddy Sizes and Energy Dissipation 267

7.4.4 The Momentum Equation in Isotropic Turbulence 269
7.4.5 Some Deductions from the Kármán–Howarth Equation 271
7.5 Spectral Theory of Homogeneous Turbulence 273
7.5.1 The Energy Spectrum Tensor 273
7.5.2 Spectra in Isotropic Turbulence 274
7.5.3 The Relationship between $E(K)$ and $f(r)$ 275
7.5.4 Rate of Change of the Energy Spectrum 278
7.5.5 The Probability Distribution of $u(\mathbf{x})$ 279
7.5.6 Calculation of the Pressure Covariance in Isotropic Turbulence 280
Problems 282
References 285
