<i>Preface</i>	v
CHAPTER 1 FUNDAMENTAL EQUATIONS	1
1.1 Introduction	1
1.1.1 The Fluid Motion Problem	1
1.2 Introduction to Statistical Thermodynamics	2
1.2.1 Molecular Number Density	2
1.2.2 Distribution Function	2
1.2.3 Molecular Collisions	3
1.2.4 Frequency of Encounters	4
1.2.5 Boltzmann's Equation	5
1.2.6 Equilibrium State	6
1.2.7 Mean Values	7
1.2.8 Maxwellian Distribution	8
1.3 Molecular Transport Equations	9
1.3.1 Mass, Momentum, Energy-Transfer	10
1.3.2 Stability	12
1.4 The Microscopic → Macroscopic Link	13
1.4.1 Equation of Continuity	13
1.4.2 Pressure–Density Relationship	14
1.4.3 Equation of State	15
1.4.4 First Law of Thermodynamics	15
1.4.5 Entropy/Boltzmann H -Function Relationship	17
1.4.6 Assessment of the Molecular Model	19
1.5 The Fundamental Equations	19
1.5.1 Steady, Irrotational Motion	19
Problems	22
CHAPTER 2 SOUND WAVES	27
2.1 Introduction	27
2.1.1 Sound Waves of Infinitesimal Amplitude	27

2.2	Plane Waves	30
2.2.1	Solution of the Wave Equation in One Dimension	30
2.2.2	Effect of Viscosity on Propagation of Plane Waves	34
2.2.3	Energy Transmission in a Plane Wave	37
2.2.4	Normal Reflection and Transmission at a Plane Interface	37
2.2.5	Reflection and Transmission of a Plane Wave at Incidence to a Plane Interface	39
2.2.6	Sound Propagation along a Tube of Non-uniform Cross-section	41
2.3	Diffraction of Sound	45
2.3.1	Kirchhoff's Theorem	45
2.3.2	Diffraction at a Small Hole	48
2.4	Spherically Symmetric Sound Waves	52
2.4.1	Waves of Infinitesimal Amplitude	52
2.5	Sources, Dipoles and Quadrupoles	54
2.5.1	Simple Sources	55
2.5.2	Dipoles	58
2.5.3	Quadrupoles	62
2.5.4	Aerodynamic Sound Generation	64
	Problems	65
CHAPTER 3 ONE-DIMENSIONAL MOTION		67
3.1	Introduction	67
3.2	Equations for One-Dimensional Motion	67
3.2.1	Simple Wave Propagation	69
3.2.2	Laval Nozzle	74
3.3	Normal Shock Relationships	76
3.3.1	Rankine–Hugoniot Relationships	77
3.3.2	Shock Thickness	80
3.4	Shock Tube	83
3.4.1	Description	83
3.4.2	Relationships between Flow Sections	84
3.4.3	Limitations	86
	Problems	87

	CONTENTS	ix
CHAPTER 4 METHODS IN SUBSONIC POTENTIAL FLOW		91
4.1 Linearized Theory		91
4.1.1 Subsonic Flow: Reduction to Incompressible Case		92
4.1.2 Slender Bodies		93
4.1.3 Thin Bodies		94
4.1.4 Three-Dimensional Subsonic Jet		96
4.1.5 Subsonic Flow over a Rough Surface		97
4.2 Numerical Method		98
4.2.1 Basic Equations		98
4.2.2 Bernoulli's Equation		99
4.2.3 Numerical Procedure		100
4.3 Sells's Inversion Method		102
4.3.1 The Mapping Function		103
4.3.2 Curvilinear Elements		106
4.3.3 Singularities of the Stream Function		107
4.3.4 Governing Equations		109
4.3.5 Circulation		110
4.3.6 Approximate \leftrightarrow Exact Link		111
4.3.7 Computational Procedure		112
Problems		114
CHAPTER 5 SUPERSONIC FLOW		117
5.1 Introduction		117
5.1.1 Flow Around a Corner		118
5.1.2 Small Deflection		118
5.1.3 Continuous Curved Bend		119
5.1.4 Prandtl-Meyer Expansion		120
5.2 Flow in a Compressive Corner		126
5.2.1 Oblique Shock		126
5.2.2 The Oblique Shock Chart		128
5.2.3 Wedge Flow		129
5.3 Interference Effects		132
5.3.1 Simple Reflection		132
5.3.2 Mach Reflection		133
5.3.3 Application to Nozzle Flow		134
5.3.4 Intersection of Oblique Shocks and Free Jet		136
5.4 Supersonic Aerofoils—Linearized Theory		136
5.4.1 Pressure Distribution		137

5.4.2 Lift, Wave Drag and Pitching Moment	138
5.4.3 Circular Arc Aerofoil	139
5.4.4 Best Aerofoil Section	141
5.4.5 Best Disposition of Segments	143
5.4.6 Conclusions	144
5.5 Method of Characteristics	144
5.5.1 Mathematical Interpretation	145
5.5.2 Physical Interpretation	148
5.5.3 Construction of Characteristics	149
5.5.4 Variation along a Characteristic	150
5.5.5 Hodograph Equations of the Characteristics	152
5.5.6 Computational Procedure	154
5.5.7 Bounded Fields	155
5.5.8 Range of Application	157
Problems	157
 CHAPTER 6 AN INTRODUCTION TO TRANSONIC FLOW	 162
6.1 Introduction	162
6.2 The Hodograph Equations	163
6.2.1 The Hypergeometric Equation	164
6.2.2 Transformation Equations	167
6.2.3 Limit Line	169
6.2.4 The Critical Streamline	172
6.3 Compressible \leftrightarrow Incompressible Correspondence	174
6.3.1 Chaplygin–Kármán–Tsien Approximation	175
6.3.2 An Exact Relation to Incompressible Flow	177
6.4 Lighthill's Method	179
6.4.1 The Normalizing Factor	180
6.4.2 Mixed Flow Around a Circular Cylinder	182
6.5 Relevance of Transonic Flow	188
Problems	188
 CHAPTER 7 THREE-DIMENSIONAL MOTION	 191
7.1 Introduction	191
7.1.1 Modification of Green's Theorem	191
7.2 Supersonic Flow Past an Aerofoil	193
7.2.1 The Particular Solution	195

	CONTENTS	xi
7.2.2	Volterra's Solution	196
7.2.3	Application to a Uniformly Loaded Infinite Span Wing	198
7.3	A Continuous Source Distribution	201
7.3.1	Finite Aspect Ratio Symmetric Wing	201
7.3.2	The Pressure Distribution on a Triangular Wing	203
7.3.3	Superposition of Source Distributions	207
7.4	Hadamard's Method	207
7.4.1	The Equivalent Source/Doublet Layer	207
	Problems	210
 CHAPTER 8 HEAT TRANSFER THROUGH AN INCOMPRESSIBLE LAMINAR BOUNDARY LAYER		 213
8.1	Introduction	213
8.1.1	The Boundary Layer Approximation for Steady Two-Dimensional Flow	214
8.1.2	The Thermal Energy Integral Equation	217
8.2	'Similar' Solutions of the Thermal Energy Equation	218
8.2.1	Forced Convection in Flow Parallel to a Semi-infinite Flat Plate	218
8.2.2	Temperature of a Plate Thermometer in a Moving Fluid	222
8.2.3	General 'Similar' Solutions for the Temperature Profile	224
8.2.4	Solutions in Terms of Series Expansions	228
8.3	Practical Methods of Calculating Heat Transfer	229
8.3.1	Lighthill's Method	229
8.3.2	Liepmann's Derivation of the Lighthill Formula	234
8.3.3	Curle's Method	236
8.3.4	Spalding's Analysis	238
	Problems	240
 CHAPTER 9 FLOW IN A COMPRESSIBLE LAMINAR BOUNDARY LAYER		 242
9.1	Introduction	242
9.1.1	The Boundary Layer Equations for Compressible Flow	242
9.1.2	The Essential Boundary Layer Characteristics	246
9.1.3	Integral Forms of the Equations	247
9.1.4	Simplifications resulting when $\sigma = 1$ and/or $\mu \propto T$	249

9.2	Flow with Zero Pressure Gradient	252
9.2.1	Von Kármán's Solution for Zero Heat Transfer	252
9.2.2	Calculations with Heat Transfer	254
9.2.3	Flows with Non-uniform Wall Temperature	260
9.2.4	Effects of Radiation at High Mach Numbers	263
9.3	Flow with Zero Heat Transfer	266
9.3.1	The Illingworth–Stewartson Transformation	267
9.3.2	Effect of Mach Number on Separation Conditions	270
9.3.3	Influence of Prandtl Number and of Viscosity Law	272
9.4	Flow with Pressure Gradient and Heat Transfer	274
9.4.1	The Illingworth–Stewartson Transformation	275
9.4.2	The Cohen–Reshotko Similarity Solutions	276
9.4.3	The Method of Tani and Poots	281
9.4.4	Calculations of Heat Transfer: Curle's Method	282
9.5	Interactions at Supersonic Speeds	284
	Problems	286
	References	289
	Index	291
