

TABLE OF CONTENTS

PART I. THE PHYSICS OF FLUIDS AND CLASSICAL HYDRODYNAMICS

	PAGE
Chapter I. General survey of experimental aerodynamics.....	3
Chapter II. The hydrodynamics of a perfect fluid.....	31
Chapter III. General physical properties of a viscous fluid.....	89

PART II. MOTION OF AN INCOMPRESSIBLE VISCOUS FLUID

Chapter I. General analytical theory.....	155
Chapter II. Motion in one direction.....	177
Chapter III. Viscous fluid in rotation.....	203
Chapter IV. Motion in two dimensions.....	223
Chapter V. Laminar motion in a boundary layer.....	252
Chapter VI. Motion in three dimensions.....	267
Chapter VII. Approximate methods of calculating the resistance to motion through a viscous fluid.....	295

PART III. TURBULENT FLOW

Chapter I. General theory.....	335
Chapter II. The use of the idea of eddy viscosity.....	385
Chapter III. Hydraulic flow in channels of various shapes.....	438

PART IV. COMPRESSIBLE FLUIDS

Chapter I. Dynamical equations of motion.....	495
Chapter II. Discharge of gases.....	529
Chapter III. Flow past an irregular boundary or obstacle.....	560
Appendix: Additional References.....	583
Author Index.....	605
Subject Index.....	626
