Preface	viii
npressible Fluids	1
	.1
1. Qualitative differences between linear and nonlinear waves	2
A. General Equations of Flow. Thermodynamic Notions	3
2. The medium	3
energy	6
4. Mathematical comments on ideal gases	- 8
5. Solids which do not satisfy Hooke's law	10
6. Discrete media.	12
7. Differential equations of motion	12
8. Conservation of energy	15
9. Enthalpy	17
10. Isentropic flow. Steady flow. Subsonic and supersonic	
flow	18
11. Acoustic approximation	18
 Vector form of the flow equations 13. Conservation of circulation. Irrotational flow. Poten- 	19
tial	19
14. Bernoulli's law	21
15. Limit speed and critical speed	23
B. Differential Equations for Specific Types of Flow	25
16. Steady flows	25
17. Non-steady flows.	28
18. Lagrange's equations of motion for one-dimensional and	30
spherical flow.	90
Appendix—Wave Motion in Shallow Water	32
19. Shallow water theory	32
thematical Theory of Hyperbolic Flow Equations for Functions of	
fwe Variables	37
20. Flow equations involving two functions of two variables.	- 37
21. Differential equations of second order type	38
22. Characteristic curves and characteristic equations	40
23. Characteristic equations for specific problems	45
24. The initial value problem. Domain of dependence.	
Range of influence	48
25. Propagation of discontinuities along characteristic lines.	53
26. Characteristic lines as separation lines between regions of	55
different types	00
xi	

•

.

27. Characteristic initial values	. 57
state	. 59
Limiting lines	. 62
Appendix.	. 75
32. General remarks about differential equations for func- tions of more than two independent variables. Char acteristic surfaces.	-
III. One-Dimensional Flow	. 79
33. Problems of one-dimensional flow	
A. Continuous Flow	
34. Characteristics	. 80
35. Domain of dependence. Range of influence	. 82
36. More general initial data	. 84
37. Riemann invariants	. 87
38. Integration of the differential equations of isentropi	
flow	
B. Rarefaction and Compression Waves	. 92
40. Simple waves	. 92
41. Distortion of the wave form in a simple wave	. 96
42. Particle paths and cross-characteristics in a simple way	'e 97
43. Rarefaction waves	. 99
44. Escape speed. Complete and incomplete rarefaction	a.
waves	. 101
45. Centered rarefaction waves	. 103
46. Explicit formulas for centered rarefaction waves	
47. Remark on simple waves in Lagrangian coordinates 48. Compression waves	. 106
40. Compression waves	. 107
Appendix to Part B	
49. Position of the envelope and its cusp in a compression wave	
C. Shocks.	. 116
50. The shock as an irreversible process	
51. Historical remarks on non-linear flow	112
52. Discontinuity surfaces	110
53. Basic model of discontinuous motion. Shock wave in a	. тта. В
tube	

.

xii

	54. Jump conditions	
	55. Shoeks	124
	56. Contact discontinuities	
	57. Description of shocks	
	58. Models of shock motion	129
	59. Discussion of the mechanical shock conditions	130
	60. Sound waves as limits of weak shocks	131
	61. Cases in which the mechanical shock conditions are suf-	
	ficient to determine the shock	131
	62. Shock conditions in Lagrangian representation	132
	63. Shock relations derived from the differential equations	
	for viscous and heat-conducting fluids	134
	64. Hugoniot relation. Determinacy of the shock transition	138
	65. Basic properties of the shock transition	141
	66. Critical speed and Prandtl's relation for polytropic gases	146
	67. Shock relations for polytropic gases	148
	68. The state on one side of the shock front in a polytropic	•
	gas determined by the state on the other side	150
	69. Shock resulting from a uniform compressive motion	150
	70. Reflection of a shock on a rigid wall	152
	71. Shock strength for polytropic gases	154
	72. Weak shocks. Comparison with transitions through	
	simple waves	156
	73. Non-uniform shocks	160
	74. Approximate treatment of non-uniform shocks of mod- erate strength	
	75. Decaying shock wave. N-wave.	164
	76. Formation of a shock	169
	77. Remarks on strong non-uniform shocks	171
		411
р.	Interactions	179
2.	•	
-	78. Typical interactions	172
	79. Survey of results	176
	80. Riemann's problem. Shock tubes	181
	81. Method of analysis	182
	82. The process of penetration for rarefaction waves	
	83. Interactions treated by the method of finite differences	197
•		
E.	Detonation and Deflagration Waves	204
	84. Reaction processes	204
	85. Assumptions.	207
	86. Various types of processes	208
	87. Chapman-Jouguet processes.	211
	88. Jouguet's rule	215
	89. Determinacy in gas flow involving a reaction front	218
	90. Solution of flow problems involving a detonation process.	222
	91. Solution of flow problems involving deflagrations	224
	92. Detonation as a deflagration initiated by a shock	226

.

. . . .

93. Deflagration zones of finite width	227
94. Detonation zones of finite width. Chapman-Jouguet	
hypothesis	231
95. The width of the reaction zone	232
96. The internal mechanism of a reaction process. Burning	
velocity	232
Appendix—Wave Propagation in Elastic-Plastic Material	235
97. The medium	235
98. The equations of motion	238
99. Impact loading	240
100. Stopping shocks	243
101. Interactions and reflections	245
IV. Isentropic Irrotational Steady Plane Flow	247
102. Analytical background	
Tom THERY WORLD BOTH STORE S	<u>44</u>
A. Hodograph Method	040
103. Hodograph transformation.	248
104. Special flows obtained by the hodograph method	252
105. The role of limiting lines and transition lines	256
B. Characteristics and Simple Waves	259
106. Characteristics. Mach lines and Mach angle	259
107. Characteristics in the hodograph plane as epicycloids	262
108. Characteristics in the (u,v) -plane continued	264
109. Simple waves.	266
110. Explicit formulas for streamlines and cross Mach lines	
in a simple wave	271
111. Flow around a bend or corner. Construction of simple	
Waves	273 🐋
112. Compression waves. Flow in a concave bend and along a	
bump	278
113. Supersonic flow in a two-dimensional duct	282
114. Interaction of simple waves. Reflection on a rigid wall.	286
115. Jets	289
116. Transition formulas for simple waves in a polytropic gas.	290
C. Ablique Shark Franks	
C. Oblique Shock Fronts.	
117. Qualitative description.	294
118. Relations for oblique shock fronts. Contact discon-	
tinuities	297
119. Shock relations in polytropic gases. Prandtl's formula.	302
120. General properties of shock transitions	304
121. Shock polars for polytropic gases	306
122. Discussion of oblique shocks by means of shock polars	311
123. Flows in corners or past wedges	317

.

D. Interactions-Shock Reflection	318
124. Interactions between shocks. Shock reflection	
125. Regular reflection of a shock wave on a rigid wall	
126. Regular shock reflection continued 127. Analytic treatment of regular reflection for polytropic	3 27
gases	329
128. Configurations of several configurations. Mach reflec-	020
tion	
129. Configurations of three shocks through one point	332
130. Mach reflections	334
131. Stationary, direct and inverted Mach configuration	
132. Results of a quantitative discussion	
133. Pressure relations	
184. Modifications and generalizations 135. Mathematical analysis of three-shock configuration	040 246
136. Analysis by graphical methods	
E. Approximate Treatments of Interactions. Airfoll Flow	350
137. Problems involving weak shocks and simple waves	
138. Comparison between weak shocks and simple waves	
139. Decaying shock front.	
140. Flow around a bump or an airfoil	
141. Flow around an airfoil treated by perturbation methods (linearization)	
142. Alternative perturbation method for airfoils	
F. Remarks about Boundary Value Problems for Steady Flow	367
143. Facts and conjectures concerning boundary conditions	367
143. Facts and conjectures concerning boundary conditions V. Flow in Nozzles and Jets	
V. Flow in Nozzles and Jets	377
V. Flow in Nozzles and Jets 144. Nozzle flow 145. Flow through cones.	377 377 377
V. Flow in Nozzles and Jets 144. Nozzle flow 145. Flow through cones 146. De Laval nozzle	377 377 377 380
V. Flow in Nozzles and Jets 144. Nozzle flow 145. Flow through cones 146. De Laval nozzle 147. Various types of nozzle flow	377 377 377 380 383
V. Flow in Nozzles and Jets 144. Nozzle flow	377 377 377 380 383 383
V. Flow in Nozzles and Jets 144. Nozzle flow	377 377 380 383 387 392
V. Flow in Nozzles and Jets 144. Nozzle flow	377 377 380 383 387 392
V. Flow in Nozzles and Jets 144. Nozzle flow	377 377 380 388 388 387 392 394
 V. Flow in Nozzles and Jets 144. Nozzle flow. 145. Flow through cones. 146. De Lavel nozzle. 147. Various types of nozzle flow. 148. Shock patterns in nozzles and jets. 149. Thrust. 150. Perfect nozzles. 	377 377 377 380 383 387 392 394 397
 V. Flow in Nozzles and Jets. 144. Nozzle flow. 145. Flow through cones. 146. De Laval nozzle. 147. Various types of nozzle flow. 148. Shock patterns in nozzles and jets. 149. Thrust. 150. Perfect nozzles. VI. Flow in Three Dimensions. A. Steady Flow with Cylindrical Symmetry. 	377 377 380 388 387 392 394 397 397
 V. Flew in Nozzles and Jets 144. Nozzle flow. 145. Flow through cones. 146. De Laval nozzle. 147. Various types of nozzle flow. 148. Shock patterns in nozzles and jets. 149. Thrust. 150. Perfect nozzles. VI. Flow in Three Dimensions. A. Steady Flow with Cylindrical Symmetry. 151. Cylindrical symmetry. Stream function. 152. Supersonic flow along a slender body of revolution. 	377 377 380 383 387 392 394 397 397 397 398
