PREFACE xiii

CONTENTS OF VOLUME I xv

Part I. **Basic Principles**

1. DEFORMATION AND MOTION

A. Cemal Eringen

1.1 Scope of the Chapter 3
1.2 Coordinates 4
1.3 The Motion, Deformation, Strain Measures 11
1.4 Length and Angle Changes 19
1.5 Strain Ellipsoids of Cauchy 24
1.6 Strain Invariants, Principal Directions 28
1.7 Rotation 35
1.8 Area and Volume Changes 40
1.9 Compatibility Conditions 42
1.10 Kinematics, Time Rates of Tensors 45
1.11 Deformation Rate, Spin, Vorticity 50
1.12 Rates of Strains and Rotations 53
1.13 Material and Spatial Manifolds 56
1.14 Kinematics of Line, Surface, and Volume Integrals 59

2. BALANCE LAWS

A. Cemal Eringen

2.1 Scope of the Chapter 69
2.2 Global Balance Laws 70
2.3 Master Law for Local Balance 74
2.4 Local Balance Laws 77
2.5 Stress Quadratic, Stress Invariants 85
2.6 Stress Flux 87

3. THERMODYNAMICS OF CONTINUA

A. Cemal Eringen

3.1 Scope of the Chapter 89
3.2 Thermodynamic Processes 90
3.3 The First and the Second Laws of Thermodynamics 93
3.4 Thermodynamic Restrictions on Some Simple Materials 97
3.5 Discontinuous Thermodynamic Processes 105
3.6 Thermodynamics of Materials with Memory 110
3.7 Onsager Forces and Fluxes 115
3.8 Onsager Force Potential, Variational Principle 124
References 127

Part II. **Constitutive Equations for Simple Materials**

1. GENERAL THEORY

A. Cemal Eringen

1.1 Scope of the Chapter 131
1.2 Raison d'Etre 132
1.3 Axioms of Constitutive Theory 134
1.4 Thermomechanical Materials 146
1.5 Thermoelastic Materials 153
1.6 Thermoviscous Fluids 155
1.7 Simple Thermomechanical Materials 159
References 172

2. THERMOELASTIC SOLIDS

Erdoğan S. Suhubi

2.1 Scope of the Chapter 174
2.2 Résumé of the Fundamental Equations 175
2.3 Constitutive Relations for Thermoelastic Solids 177
2.4 Isotropic Thermoelastic Solids 183
2.5 Linear Constitutive Relations 186
2.6 Linear Theory for Isotropic Thermoelastic Solids 190
2.7 Temperature-Rate-Dependent Thermoelastic Solids 191
2.8 Constitutive Relations for Elastic Materials. Hyperelasticity 199
2.9 Various Forms of Constitutive Relations 203
2.10 Anisotropic Elastic Solids 205
2.11 Restrictions on the Strain Energy Function for Isotropic Materials 220
2.12 Work Relations for Elastic Equilibrium 223
2.13 Formulation of Boundary-Value Problems. Elasticities 225
2.14 Formulation of Boundary-Value Problems in Isotropic Materials 230
2.15 Approximate Theories for Hyperelastic Solids 235

2.16 Variational Theorems of Elastostatics 243
2.17 Small Motions Superimposed on Large Static Deformations 246
2.18 Stability of Elastic Equilibrium 258
References 262

3. THERMOVISCOUS FLUIDS

Tien Sun Chang

3.1 Scope of the Chapter 267
3.2 Equations of Balance 268
3.3 Entropy Inequality 270
3.4 Definition and Constitutive Relations of a Temperature-Rate-Independent Thermoviscous Fluid 272
3.5 Limitations Placed on the Constitutive Functions by the Entropy Inequality 275
3.6 Connection with the Classical Theory of Linear Thermoviscous Fluids 278
References 281

4. SIMPLE MATERIALS WITH FADING MEMORY

Ellis Harold Dill

4.1 Scope of the Chapter 284
4.2 Linear Viscoelasticity 286
4.3 Mathematical Prerequisites 295
4.4 Nonlinear Constitutive Relations 301
4.5 Material Symmetries 311
4.6 Fading Memory Space 323
4.7 Finite Linear Viscoelasticity 328
4.8 Materials of Integral Type 336
4.9 Thermodynamics of Kelvin–Voigt Materials 345
4.10 Thermodynamics of Materials with Fading Memory 351
4.11 Thermodynamical Restrictions on the Mechanical Constitutive Relations 357
4.12 Small Deformations 372
4.13 Material Testing 376
4.14 Fluids 387
References 397

Part III. **Methods of Solution**

1 EXACT SOLUTIONS IN FLUIDS AND SOLIDS

Charles B. Kafadar

1.1 Scope of the Chapter 408
1.2 Historical Précis 408
1.3 Erickson's Theorems in Finite Elasticity for Static Deformations 409
1.4 Viscometric Flows 413

1.5 Universal Motions for Isotropic, Homogeneous, Incompressible, Simple Materials 414
1.6 Sundry Mathematical Representation Theorems 416
1.7 Simple Fluids 418
1.8 Simple Shearing in a Reiner–Rivlin Fluid 419
1.9 Simple Shearing in a Simple Fluid 421
1.10 Radial Flow in a Simple Fluid 423
1.11 On the Thermodynamic Impossibility of a Steady Poiseulle Flow in a General Simple Fluid 426
1.12 Simple Isotropic Solids 430
1.13 Dynamic Simple Shearing in an Elastic Body 431
1.14 Motions in Simple Solids; Response Functionals Determined by Homogeneous Motions 434
1.15 Radial Oscillations in a Simple Solid Hollow Sphere 444
1.16 Static Deformations 446
References 447

2. SINGULAR SURFACES AND WAVES

Matthew F. McCarthy

2.1 Scope of the Chapter 450
2.2 Compatibility Conditions on a Moving Singular Surface 453
2.3 Classification of Singular Surfaces 458
2.4 Basic Laws of Continuum Mechanics 459
2.5 Propagation of Acceleration Waves in Definite Conductors 461
2.6 The Variation of the Amplitudes of Acceleration Waves in Definite Conductors 465
2.7 Propagation of Acceleration Waves in Nonconductors 469
2.8 Acceleration Waves in Isotropic Materials 471
2.9 The Influence of Hydrostatic Pressure on the Propagation of Acceleration Waves 474
2.10 Second-Order Effects in Wave Propagation 477
2.11 Relations of Acceleration Waves to Plane Waves of Infinitesimal Amplitude 479
2.12 Waves in Incompressible Materials 482
2.13 Simple Waves 484
2.14 Undirectional Simple Waves in Isotropic Media 489
2.15 Shock Waves in Elastic Nonconductors 494
2.16 Shock Waves in Infinitesimal Amplitude 498
2.17 Shock Waves in Isotropic Media 500
2.18 Solution of Initial Boundary Value Problems 503
References 513

3. COMPLEX FUNCTION TECHNIQUE

Fazil Erdogan

3.1 Scope of the Chapter 524
3.2 Definitions: Dual Series, Dual Integral Equations, Potential, Flux 525
3.3 Methods of Solution of Mixed Boundary Value Problems 530

3.4 Direct Application of Complex Potentials 531
3.5 Nature of the Kernel in Mixed Boundary Value Problems 536
3.6 Reduction of Dual Series Equations to Singular Integral Equations 540
3.7 Reduction of Dual Integral Equations to Singular Integral Equations 546
3.8 Dual Integral Equations Leading to Singular Integral Equations of the Second Kind 551
3.9 A System of Dual Series–Integral Equations 561
3.10 Singular Integral Equations with a Generalized Cauchy Kernel 568
3.11 Numerical Solution of the Singular Integral Equations of the First Kind 572
3.12 Solution of Singular Integral Equations of the Second Kind 585
3.13 Solutions by Gauss–Chebyshev and Gauss–Jacoby Integration Formulas 591
References 601
