PREFACE	v
CHAPTER I FLUID DYNAMICS OF NONSTEADY FLOWS	
<i>Antonio Ferri and Luigi G. Napolitano</i>	
A. Introduction	1
B. Fluid with Constant Composition	
Basic Equations	2
One-Dimensional Unsteady Continuous Motion of an Ideal Fluid	5
Quasi-One-Dimensional Unsteady Continuous Motion of an Ideal Fluid	8
Approximate Methods of Solution	10
Particular Cases. Isentropic Motion. Simple Waves	13
Initial Value Problems	17
C. Fluid with Variable Composition	
One-Dimensional Unsteady Motion of a Mixture with Variable Composition	21
One-Dimensional and Quasi-One-Dimensional Unsteady Motion of a Reacting Gas Mixture with Negligible Molecular Transports	25
D. Deviation from Ideal Fluid	30
Viscosity and Heat-Conduction Effects	31
Real-Gas Effects	33
Appendix A: Characteristic Curves for System of Quasi-linear First Order Partial Differential Equations	37
Appendix B: Thermodynamic Properties of Air at High Temperature	40
Appendix C: Symbols and Definitions	43
References	44
CHAPTER II FLOWS WITH DISCONTINUITIES	
<i>Luigi G. Napolitano</i>	
A. Introduction	47
B. Flow Discontinuities, or an Ideal, Perfect Fluid with Constant Composition	48
Basic Discontinuity Relations	49
Basic Properties of Shocks	52
Spherical and Cylindrical Shocks	62
C. Discontinuous Motion Within Channels with Varying Area	66
Interaction of Simple Waves with a Discontinuity in Cross-Section	67
Interaction of Shocks with a Discontinuity in Cross-Section	72
Interaction of a Contact Surface with a Discontinuity in Cross-Section	75
D. Interactions	76
Interactions Involving Shocks and Simple Waves	78
Interactions Between Contact Surfaces and Simple Waves or Shocks	82
Appendix A: Symbols and Definitions	84
References	84

	PAGE
CHAPTER III SHOCK TUBE TECHNOLOGY AND DESIGN	
<i>H. T. Nagamatsu</i>	
A. Introduction	86
B. Theory of Shock Tube and Shock Tunnel	87
Constant-Area Shock Tube	88
Shock Tube with Contraction at the Diaphragm Section	92
Reflected Shock Waves	93
Hypersonic Flow in the Nozzle	97
Real-Gas Effects in a Shock Tube and Shock Tunnel	99
C. Design Features of Shock Tube and Shock Tunnel	105
Driver and Diaphragm Section	105
Shock Tube of Constant-Area Section	109
Nozzle, Test Section, Dump Tank and Sting Support	109
D. Various Driver Methods	112
Conventional Methods for Heating the Driver Gas	112
Combustion Heating Technique	112
Heating by Electrical Discharge	115
Double-Driver and Tailored-Interface Techniques	115
E. Instrumentation	116
Pressure Gage	116
Heat Gages	118
Ionization Gages	119
Velocity and Shock-Wave Determination	119
Optical Methods	119
F. Investigations in the Shock Tube and Shock Tunnel	120
Results in the Driver and Shock Tube	120
Hypersonic Nozzle Flow Results	125
References	133
CHAPTER IV CHEMICAL REACTION RATES	
A. INTRODUCTION	137
<i>S. S. Penner</i>	
B. THE RATE OF DISSOCIATION OF THE HALOGENS	138
<i>Norman Davidson</i>	
Introduction	138
"Relaxation Times"	138
Shock-Wave Experiments	140
Other Methods of Measuring $k_r$	145
Results	146
Interpretation	150
Conclusions	153
References	154
C. THE HYDROGEN-BROMINE REACTION IN A SHOCK TUBE	155
<i>Norman Davidson</i>	
Introduction	155
Shock-Wave Studies	157
Conclusions	159
References	160

# TABLE OF CONTENTS

	PAGE
D. KINETICS STUDIES IN A SINGLE-PULSE SHOCK TUBE	161
<i>A. Hertzberg and H. S. Glick</i>	
General Discussion	161
Wave Processes and Experimental Methods	163
Experimental Results	169
Nitric Oxide Studies	169
Comparison with Oxygen Dissociation Studies	172
Aliphatic Hydrocarbon Decomposition Studies	174
Conclusions	181
Acknowledgment	181
References	181
E. EXPERIMENTS ON CARBON FORMATION FROM HYDROCARBONS BEHIND INCIDENT AND REFLECTED SHOCK FRONTS	183
<i>S. S. Penner, E. N. Bennett, F. Harshbarger and W. J. Hooker</i>	
Introduction	183
Thermodynamic Calculations on Carbon Formation from Acetylene	183
Estimates for the Temperature Rise Associated with the Decomposition of Acetylene	190
Thermodynamic Calculations on Carbon Formation from Methane, <i>n</i> - Heptane and Acetylene Using Equilibrium Values of $\gamma$	198
Calculation of the Minimum Time at Temperature $T_s$ Behind a Reflected Shock Wave	199
Apparatus and Experimental Procedure for the Study of Acetylene Decomposition	203
The Shock Tube	203
Gas-Handling System	203
Shock-Velocity Determinations	204
Optical Facilities	204
Experimental Results	205
Determination of the Minimum Pressure Ratio Required for Carbon Formation	205
Simultaneous Light Absorption and Emission Measurements Behind Carbon-Forming Shocks	206
Induction Period Experiments	211
Temperature Measurement behind Carbon-Forming Shocks in Pure Acety- lene by Use of the Two-Color Method	215
High-Speed Photographs of the Emitted Visible Radiation	218
Concluding Remarks	218
References	220
CHAPTER V IONIZATION PROCESSES IN SHOCK WAVES	
<i>V. H. Blackman and G. B. F. Niblett</i>	
A. Introduction	221
B. Equilibrium Conditions	222
C. Electrical Conductivity	228
D. Approach to Equilibrium Ionization	232
E. Interaction with Magnetic Fields	238
References	240

# TABLE OF CONTENTS

	PAGE
CHAPTER VI VIBRATIONAL RELAXATION TIMES <i>W. C. Griffith</i>	
A. Introduction	242
B. Theory of Vibrational Heat Capacity and Excitation Rates	243
C. Speed of Sound	245
D. Fully-Dispersed Shock Waves	246
E. Partially-Dispersed Shocks	248
F. Nozzle Flow	255
G. Detached Bow Waves	256
H. Vibrational Excitation as a Prelude to Dissociation	257
I. List of Symbols	259
References	260
 CHAPTER VII THE DETERMINATION OF ABSOLUTE INTENSITIES AND $f$ -NUMBERS FROM SHOCK-TUBE STUDIES <i>S. S. Penner</i>	
A. Introduction	261
B. Basic Physical Laws for Equilibrium Line Radiation	262
Black-Body Radiation Laws	262
Distributed Radiators	264
Einstein Coefficients and Integrated Absorption	264
Oscillator Strengths	265
Spectral Line Profiles	266
Absolute Intensities and Half-Widths	268
C. Measurement Principles Involved in Relative and Absolute Intensity Determinations for Discrete Transitions	268
Quantitative Determination of Relative Integrated Intensities of Isolated Spectral Lines; Population Temperatures	269
Measurement of Integrated Transmittance, Fractional Transmission, and Integrated Absorbance for Isolated Spectral Lines	273
Procedures for Absolute Intensity Measurements	276
D. Bound-Free and Free-Free Transitions (Continuum Radiation)	279
Empirically Determined Collision Cross-Sections and $f$ -Numbers for Free-Bound Transitions	280
Theoretical Expression for Free-Free and Bound-Free Absorption Coefficients	281
E. Emissivity Estimates for Heated Air	282
Emissivity Measurements Behind Shock Fronts in Air	283
Absorptivity Measurements Behind Shock Fronts in Air	285
$f$ -Number Estimates Deduced from Shock-Tube Studies	285
F. Qualitative Spectroscopic Studies Behind Shock Fronts	286
G. Two-Path Emission Spectroscopy for the Determination of Temperature, Concentrations and Absolute Intensities	287
A Two-Path Technique for the Determination of Gas Emissivities, Population Temperatures, and Concentrations Behind Shock Fronts	287
References	288

# TABLE OF CONTENTS

	PAGE
CHAPTER VIII EQUATIONS OF STATE AND THERMODYNAMIC FUNCTIONS	
<i>R. E. Duff</i>	
A. Introduction	
B. Theory	291
C. Experiments with Gases	296
D. Experiments with Condensed Media	305
E. Investigation of Phase Changes	315
References	318
CHAPTER IX GASEOUS DETONATIONS AND THE STRUCTURE OF A DETONATION ZONE	
<i>H. Gg. Wagner</i>	
A. Theory of a Stable Detonation	320
B. Detonation Velocity	329
C. Limits of Detonability	336
D. Comparison Between Experimental and Calculated Values of the Detonation Velocity	340
E. The System $C_2H_2-O_2$	344
F. Spectra of Detonation	347
G. Spherical Detonation Waves	349
H. Ignition by Shock Waves	351
I. Initiation of a Detonation	355
J. Spin	363
K. The Reaction Zone of a Detonation	374
References	381
CHAPTER X ATOMIC LINE PROFILES AND MOLECULAR EMISSION SPECTRA	
<i>O. Laporte and E. B. Turner</i>	
A. Introduction	386
B. Importance of Time Resolution	386
C. General Remarks on Stark Effects	388
D. Calculation of the Intensity of $H_{\beta}$ as a Function of the Concentration of Added Hydrogen	390
E. Experimental Apparatus and Techniques	392
Conventional Shock-Tube Equipment	393
Electrically-Driven Shock Tube	393
Spectroscopic Equipment	394
F. Stark Broadening of $H_{\beta}$ : Comparison of Experiments and Theory	392
G. Use of the Other Spectral Lines	398
H. The Emission Bands of the $C_2$ Molecule	399
I. $C_2$ -Luminosity of the Boundary Layer	403
J. Concluding Remarks	404
References	404
Author Index	405
Subject Index	411
