# VIII. FLOW IN PIPES AND CHANNELS AND ALONG FLAT PLATES (continued).

SECTION III. TURBULENT FLOW.

152. Calculations of velocity distributions of mean flows	331
153. The velocity distribution near a wall: momentum transfer theory.	
Experimental results from flow through smooth circular pipes	331
154. The logarithmic resistance formula for flow through a smooth	
pipe or channel. The relation between the velocity at the axis	
and the average velocity over a section of a pipe	336
155. Blasius's resistance formula for smooth pipe flow: power formulae	
for the velocity distribution	339
156. Velocity distributions in two-dimensional pressure flow between	
smooth or rough parallel walls, and in flow through a smooth	
or rough circular pipe: momentum transfer theory	340
157. The vorticity transfer theory and the velocity distributions for	
pressure flows between parallel walls and through circular pipes	
(smooth or rough surfaces)	344
158. The similarity theory	347
159. Velocity distributions for pressure flows between parallel walls	
and through circular pipes on the similarity theory (smooth or	
rough surfaces)	352
160. Experimental determination of the mixture length	356
161. Straight pipes of non-circular cross-section. Resistance. Secon-	
dary flow	358
dary flow 162. The inlet length for turbulent flow in smooth circular pipes	358 360
dary flow 162. The inlet length for turbulent flow in smooth circular pipes 163. Frictional intensity and resistance for turbulent flow along a	358 360
dary flow 162. The inlet length for turbulent flow in smooth circular pipes 163. Frictional intensity and resistance for turbulent flow along a smooth flat plate	358 360 361
dary flow 162. The inlet length for turbulent flow in smooth circular pipes 163. Frictional intensity and resistance for turbulent flow along a smooth flat plate 164. The resisting moment on a smooth rotating disk	358 360 361 367
dary flow 162. The inlet length for turbulent flow in smooth circular pipes 163. Frictional intensity and resistance for turbulent flow along a smooth flat plate 164.
