PART I

A THEORY OF THE GENERAL FORMS OF RELATIONS BETWEEN THE STRAINS AND STRESSES IN ISOTROPIC AND ANISOTROPIC MEDIA

<i>Chapter I The strain field and its invariants</i>	25
§ 1.1 Coordinate systems	25
§ 1.2 Strain tensor	27
§ 1.3 Invariants of the strain tensor	49
§ 1.4 Variation of the strain tensor	57
§ 1.5 Deformational changes of length, area and volume	62
§ 1.6 An invariant form of the small strain compatibility equations	74
§ 1.7 An invariant form of the finite strain compatibility equations	77
§ 1.8 The strain velocity and acceleration vectors	82
§ 1.9 The strain rate tensor and its invariants	85
§ 1.10 Examples	88
<i>Chapter II The stress field and its invariants</i>	94
§ 2.1 The stress tensor	94
§ 2.2 Invariants of the stress tensor	98
§ 2.3 The stress rate tensor and its invariants	104
§ 2.4 On physical components of tensors	105
§ 2.5 Examples	107
<i>Chapter III Joint invariants of the strain and stress fields</i>	112
§ 3.1 Preliminary remarks	112
§ 3.2 Examples of the evaluation of one set of invariants in terms of another	113

§ 3.3	The basic invariants of two symmetric second order tensors in two-dimensional Euclidean space	121
§ 3.4	The basic invariants of two symmetric second order tensors in three-dimensional Euclidean space	122
§ 3.5	Joint invariants of the stress and strain tensors	124
§ 3.6	Joint invariants of the strain and strain rate tensors	125
§ 3.7	Joint invariants of the strain tensor and the transformed strain tensor	126
	<i>Chapter IV General forms of the relationships between the components of the stress and strain tensors for equilibrium deformation processes of isotropic media.</i>	128
§ 4.1	The case of small deformations	128
§ 4.2	The case of finite deformations	135
§ 4.3	Examples	140
	<i>Chapter V The general forms of the relationships between stresses and strains for non-equilibrium deformation processes of isotropic bodies</i>	142
§ 5.1	Viscous media	142
§ 5.2	Hereditary media.	148
	<i>Chapter VI Extension of some of the preceding results to anisotropic media</i>	150
§ 6.1	Preliminary remarks	150
§ 6.2	The linear elastic, anisotropic media	151
§ 6.3	Non-linear elastic, anisotropic media	156
§ 6.4	Viscous and visco-elastic anisotropic media	160
§ 6.5	Relaxing anisotropic media	161
	<i>Chapter VII On the relations between the directions of the principal axes of the stress and strain tensors for different media</i>	163
§ 7.1	Relations between the directions of the principal axes of the stress and strain tensors for equilibrium processes of deformation of isotropic media	163
§ 7.2	Relations between the directions of the principal axes of the stress, strain and strain rate tensors for non-equilibrium deformation processes of isotropic media	164
§ 7.3	Relations between the directions of the principal axes of the stress and strain tensors for equilibrium and non-equilibrium processes of deformation of isotropic media	167

7.4	Relations between the directions of the principal axes of the strain tensor in Lagrangean and Eulerian representations	168
§ 7.5	Lines of principal stress and principal strain. Examples	169

PART II

THE THERMODYNAMICS OF DEFORMATION

<i>Chapter VIII</i>	<i>The first and second laws of thermodynamics</i>	175
§ 8.1	Introductory remarks	175
§ 8.2	The problem of Pfaff	179
§ 8.3	The work density of the stresses for variations of the deformed state in the case of small deformations	183
§ 8.4	The first law of thermodynamics	184
§ 8.5	The second law of thermodynamics	188
§ 8.6	Another formulation of the second law of thermodynamics	193
§ 8.7	The relationship between the heat capacities for a constant stress tensor and for a constant strain tensor	194
§ 8.8	The change of temperature for rapid variations of the stress or strain tensor	196
§ 8.9	On relations between the isothermal and adiabatic moduli of elasticity	198
<i>Chapter IX</i>	<i>Thermodynamic potentials of deformation</i>	201
§ 9.1	The basic thermodynamic potentials	201
§ 9.2	A complete class of thermodynamic potentials of deformation. The Legendre transformation	210
§ 9.3	Supplementary remarks on thermodynamic potentials	215
§ 9.4	Certain thermodynamic relations	217
§ 9.5	Historical and general remarks	219
§ 9.6	Examples	220
<i>Chapter X</i>	<i>The differential equations of the thermodynamics of deformation</i>	222
§ 10.1	Differential equations for the invariants of the stress and strain tensors	222
§ 10.2	Differential equations for thermodynamic deformation potentials	227
§ 10.3	Additional remarks on the differential equations of thermodynamics	230
§ 10.4	Additional remarks on Cauchy problems for the differential equations of thermodynamics	237

§ 10.5	The characteristics of the differential equations of thermodynamics	240
§ 10.6	Examples	249
<i>Chapter XI The thermodynamics of the deformation of anisotropic media</i>		252
§ 11.1	Thermodynamic potentials of deformation of anisotropic media	252
§ 11.2	The differential equations of the thermodynamics of deformation of anisotropic media	254
<i>Chapter XII Some special problems of the thermodynamics of deformation</i>		257
§ 12.1	The deformation of visco-elastic media in a variable temperature field	257
§ 12.2	The differential equations of the kinetics of phase changes	260
<i>Chapter XIII The thermodynamics of arbitrary finite deformation</i>		263
§ 13.1	The fundamental equations in Eulerian variables	263
§ 13.2	The differential equations for the thermodynamic potentials in the case of finite deformation	276
§ 13.3	The fundamental equations in Lagrangean variables	278
§ 13.4	Some observations on boundary value problems	283
§ 13.5	The thermodynamics of deformation of caoutchouc	285
§ 13.6	Examples	288
<i>Chapter XIV Dynamical problems</i>		290
§ 14.1	Preliminary remarks	290
§ 14.2	The basic Eulerian and Lagrangean equations of the dynamics of deformable media	291
§ 14.3	Examples	292
§ 14.4	Discontinuous solutions in the mechanics of continuous media as thermodynamic irreversible processes	294
§ 14.5	Hamilton's method in the mechanics of deformable media	297
