

## CONTENTS

Preface . . . . .	V
Acknowledgments . . . . .	IX
CHAPTER 1. INTRODUCTION . . . . .	1
1. Historical review . . . . .	1
2. Recent developments in wave sensing . . . . .	9
3. Names and nonsense . . . . .	13
4. Glossary of symbols and definitions . . . . .	15
5. Vertical distribution of atmospheric properties . . . . .	18
6. Typical values of wave parameters . . . . .	25
CHAPTER 2. THE FUNDAMENTAL EQUATIONS . . . . .	27
7. Introduction . . . . .	27
8. A little thermodynamics . . . . .	27
The first law . . . . .	27
Equation of state . . . . .	28
Specific heat . . . . .	30
Internal energy . . . . .	31
Work done by external forces . . . . .	32
Adiabatic processes . . . . .	33
Isothermal processes . . . . .	33
9. Continuity equation . . . . .	34
Conserved properties . . . . .	34
Conservation of matter . . . . .	35
Continuity equation in the ionosphere . . . . .	37
Production and loss in the ionospheric continuity equation . . . . .	38
10. Equations of motion . . . . .	39
Conservation of momentum . . . . .	39
The stress tensor . . . . .	40
The shearing stresses . . . . .	41
The Reynolds' stresses and eddy viscosity . . . . .	45
The Coriolis force . . . . .	46
Inertial oscillations . . . . .	50
Scale analog of a rotating earth . . . . .	51
The force of gravity . . . . .	52
11. The electromagnetic forces . . . . .	55
12. Ohm's law in the ionosphere . . . . .	58
13. Maxwell's equations . . . . .	60
14. The high-frequency approximations . . . . .	60
Electromagnetic waves . . . . .	60
Electrostatic waves . . . . .	64
15. The low-frequency equations . . . . .	65
16. The perturbation equations . . . . .	66
17. Speed of sound . . . . .	70
18. Potential temperature and the Väisälä-Brunt frequency . . . . .	71
19. Gravity waves . . . . .	75

20. The Lagrangian equations . . . . .	77
Equation of continuity . . . . .	78
Equations of motion . . . . .	80
<b>CHAPTER 3. RELATIONSHIPS BETWEEN FIELD VARIABLES . . . . .</b>	<b>89</b>
21. The basic equations . . . . .	89
Eckart's coefficient — the Boussinesq approximation . . . . .	90
Some dynamic relationships . . . . .	92
The impedance equation . . . . .	93
Lamb waves . . . . .	95
Rossby waves . . . . .	96
The polarization equations . . . . .	97
22. Energy and momentum . . . . .	100
Wave energy and energy flux . . . . .	100
Wave momentum flux . . . . .	108
<b>CHAPTER 4. WAVE EQUATIONS AND DISPERSION EQUATIONS . . . . .</b>	<b>111</b>
23. Compressible model with earth rotation, no vertical shear, non-ionized medium . . . . .	111
Some special cases . . . . .	112
The propagation diagnostic diagram . . . . .	113
The acoustic cut-off frequency (diagnostic diagram Branch A) . . . . .	113
Buoyancy waves (diagnostic diagram Branch B) . . . . .	115
The propagation surfaces . . . . .	117
Interpretation of the dispersion equation for buoyancy-inertial waves . . . . .	118
Group velocity and energy flow . . . . .	118
24. Model with vertical shear, no earth rotation . . . . .	121
25. Ionized, incompressible, inviscid model; no collisions; no earth rotation . . . . .	124
<b>CHAPTER 5. SOME BOUNDARY VALUE PROBLEMS . . . . .</b>	<b>129</b>
26. Introduction . . . . .	129
Layered models . . . . .	129
Continuous-function models . . . . .	130
Arbitrary models . . . . .	130
27. The kinematic boundary condition . . . . .	130
28. The dynamic boundary condition . . . . .	131
29. Eigensolutions, models discontinuous in density . . . . .	132
Model with no shear, density discontinuous . . . . .	132
Model with wind and density discontinuous . . . . .	136
The Wegener hypothesis . . . . .	138
Model with two wind and density discontinuities . . . . .	141
Model with constant shear, one density discontinuity . . . . .	143
Model with constant shear, two discontinuities in density . . . . .	144
Model with one density and two wind gradient discontinuities . . . . .	146
Model with two density and wind gradient discontinuities . . . . .	147
30. Eigensolutions, models continuous in density . . . . .	149
Homogeneous model with shear . . . . .	149
Three-layer model continuous in density and temperature, no shear . . . . .	150
Two-layer model, surface-based inversion . . . . .	156
Three layers continuous in density, temperature, and wind . . . . .	156
General three-layer model; homogeneous shear layer . . . . .	157
31. Models continuous in gradients of velocity and density . . . . .	162
Model with smooth density profile, no shear (Groen's model) . . . . .	162
Model with tanh wind profile; exponential density . . . . .	166

Model with tanh wind profile; $\rho = \rho_s \exp(-S \tanh z/d)$ . . . . .	167
32. The WKB approach . . . . .	168
33. Critical levels . . . . .	170
Introduction . . . . .	170
The Kelvin cat's eye pattern . . . . .	171
The cockeyed cat's eye of G.I. Taylor . . . . .	172
Streamline pattern near critical layer with static stability . . . . .	175
Wave encounters with critical levels . . . . .	176
 CHAPTER 6. DYNAMIC STABILITY OF ATMOSPHERIC WAVES . . . . .	 183
34. Introduction . . . . .	183
35. Stability in fluid with linear wind, exponential density . . . . .	185
36. Richardson number . . . . .	188
Introduction . . . . .	188
Ri-distribution in a wave in medium with no shear . . . . .	189
Ri-distribution in a wave in medium with shear . . . . .	197
37. The stability of homogeneous shear flow . . . . .	198
Inflection point instability . . . . .	199
Howard's semicircle theorem . . . . .	200
38. The stability of heterogeneous shear flow . . . . .	202
Observations of dynamic stability of atmospheric layers . . . . .	210
 CHAPTER 7. WAVE PROPAGATION IN A DISSIPATIVE ATMOSPHERE . . . . .	 215
39. Introduction . . . . .	215
40. Minimum wave scale sizes permitted in the presence of viscosity and thermal conductivity . . . . .	218
41. Buoyancy and acoustic waves in viscous or thermally conducting atmosphere — limiting approximations . . . . .	224
Buoyancy waves in a viscous incompressible atmosphere . . . . .	225
Acoustic waves in a viscous atmosphere — gravity neglected . . . . .	230
Buoyancy waves in a thermally conducting, inviscid incompressible atmosphere . . . . .	231
Acoustic waves in a thermally conducting atmosphere — gravity neglected . . . . .	232
42. Waves in a windless isothermal atmosphere with constant kinematic viscosity . . . . .	233
43. Waves in a windless isothermal atmosphere with constant kinematic thermal conductivity . . . . .	234
44. Wave propagation in a windless, isothermal atmosphere with constant viscosity or thermal conductivity . . . . .	235
45. Energy transport in a viscous atmosphere . . . . .	236
46. Waves in a viscous, thermally conducting isothermal atmosphere . . . . .	237
47. Wave propagation in a windless atmosphere with Rayleigh friction . . . . .	238
48. Atmospheric wave propagation in a partially ionized atmosphere . . . . .	238
49. Wave propagation in an atmosphere with radiative damping . . . . .	247
50. Wave dissipation — effects on the mean atmospheric flow . . . . .	249
 CHAPTER 8. MOUNTAIN LEE WAVES . . . . .	 251
51. Introduction . . . . .	251
52. Linear problem for flow over an obstacle . . . . .	252
The eigenfunctions and field variables . . . . .	252
53. The lower boundary . . . . .	254
Sinusoidal boundary . . . . .	254
Boundary perturbation concentrated on $y$ -axis . . . . .	255
Bell-shaped boundary perturbation . . . . .	256

54. One-layer models . . . . .	257
Case when $k \gg k_N$ . . . . .	257
Case when $k \simeq k_N$ . . . . .	257
Case when $k_N \gg k \gg k_\Omega$ . . . . .	261
Case when $k \simeq k_\Omega$ . . . . .	262
Case of $k \ll k_\Omega$ . . . . .	265
Concluding remarks . . . . .	265
55. Two-layer model . . . . .	265
Isolated mountains and ridges . . . . .	268
56. Models with three or more layers . . . . .	269
57. Wind shear . . . . .	270
58. Non-linear flow and lee waves . . . . .	272
59. Vertical energy and momentum transport by mountain lee waves. . . . .	278
 CHAPTER 9. INFRASOUND . . . . .	 283
60. Introduction . . . . .	283
61. Sources of infrasound . . . . .	283
Auroral emissions from magnetic substorms . . . . .	287
Infrasonic emissions from severe weather . . . . .	289
Infrasonic emission from the sea surface (microbaroms) . . . . .	295
Infrasound of unknown origin . . . . .	300
62. Propagation of infrasound — the normal mode approach . . . . .	304
Formulation for numerical solution by normal modes . . . . .	305
Impulsive point source . . . . .	312
Examples of numerical solution by normal modes . . . . .	319
63. Propagation of infrasound — ray tracing . . . . .	322
64. Structure of the atmospheric wave guide . . . . .	326
65. Reception and analysis of infrasound . . . . .	328
Power-spectrum analysis — general . . . . .	329
The covariance function . . . . .	330
Power-spectrum computation — transform of $R(\tau)$ . . . . .	331
Power-spectrum computation — Fast Fourier Transform (FFT) . . . . .	332
Cross-power spectrum . . . . .	333
Applications of cross-spectrum analysis to spatially separated recordings . . . . .	335
Beam steering of phased arrays . . . . .	337
Beamwidth of signal . . . . .	341
Velocity bandwidth . . . . .	348
General solution . . . . .	352
Example . . . . .	356
 CHAPTER 10. PROGRESSIVE BUOYANCY WAVES IN THE LOWER ATMOSPHERE . . . . .	 359
66. Introduction . . . . .	359
67. Review of proposed wave sources and source mechanisms in the lower atmosphere . . . . .	359
Orography . . . . .	359
Squall lines and frontal systems . . . . .	360
Turbulence . . . . .	360
Penetrative convection . . . . .	362
Wave-wave interactions . . . . .	362
Geostrophic adjustment . . . . .	362
Shear instability . . . . .	363

Ekman-layer instability . . . . .	363
Wave generation by boundary-layer turbulence . . . . .	363
68. Case studies — introduction . . . . .	364
Long waves on elevated layers . . . . .	364
Waves generated by shear instability in the troposphere . . . . .	386
Waves in the boundary layer . . . . .	387
Small-scale waves and vortices . . . . .	389
 CHAPTER 11. WAVES IN THE UPPER ATMOSPHERE . . . . .	 399
69. Introduction . . . . .	399
70. Buoyancy waves manifested in the neutral upper atmosphere . . . . .	402
71. Atmospheric waves manifested in the ionized upper atmosphere . . . . .	406
Traveling ionospheric disturbances . . . . .	406
Spread F . . . . .	413
Sporadic E . . . . .	414
D-region ionospheric irregularities . . . . .	417
72. Propagation in the upper atmosphere . . . . .	417
73. Sources of buoyancy waves in the upper atmosphere . . . . .	418
74. Wave dynamics in the upper atmosphere . . . . .	420
Wave energy and momentum deposition in the upper atmosphere . . . . .	420
The quasi-biennial oscillation . . . . .	422
 References . . . . .	 423
 Appendices . . . . .	 441
 Author Index . . . . .	 443
 Subject Index . . . . .	 449
