

CONTENTS

I. THE STRAIN ENERGY FUNCTION	1
1.1. Summary of notation and formulae	1
1.2. Theorems on invariants	7
1.3. Strain energy	8
1.4. Crystal classes	10
1.5. Form-invariance	10
1.6. Symmetry transformations	11
1.7. The triclinic system	13
1.8. The monoclinic system	13
1.9. The rhombic system	14
1.10. The tetragonal system	15
1.11. The cubic system	16
1.12. The hexagonal system	18
1.13. Transverse isotropy	23
1.14. Isotropy	25
1.15. Stress-strain relations	26
1.16. Curvilinear aeolotropy	29
1.17. Geometrical constraints	32
1.18. Stress-strain relations for materials subject to constraints	33
II. GENERAL SOLUTIONS OF PROBLEMS	36
2.1. Cylindrically symmetrical problems: incompressible transverse isotropy	38
2.2. Extension and torsion of an incompressible solid circular cylinder	41
2.3. Extension, inflation, and torsion of an incompressible circular cylindrical tube	42
2.4. Incompressible circular tube turned inside out	45
2.5. Flexure of an initially curved incompressible cuboid	45
2.6. Flexure of a cuboid of incompressible transversely isotropic material	47
2.7. Homogeneous strain of an aeolotropic cuboid	51
2.8. Flexure of an incompressible aeolotropic cuboid	54
2.9. Cylindrically symmetrical problems: incompressible cylindrical aeolotropy	55
2.10. Combined flexure and homogeneous strain of an incompressible aeolotropic cuboid	58
2.11. Cylindrical symmetry: compressible transversely isotropic material	61
2.12. Extension and torsion of a solid compressible circular cylinder	63
2.13. Extension, inflation, and torsion of a compressible circular cylindrical tube	64
2.14. Flexure of a cuboid of compressible aeolotropic material	65

2.15. Cylindrically symmetrical problems; compressible cylindrically aeolotropic bodies	68
2.16. Combined flexure and homogeneous strain of a compressible aeolo- tropic cuboid	70
2.17. Cylindrically symmetrical problems: parametric forms	71
2.18. Combined flexure and homogeneous strain of an aeolotropic cuboid: parametric forms	78
2.19. Inversion and expansion of a spherical shell	80
2.20. Generalizations of the shear problem	83
2.21. Generalized shear: complex variable	86
2.22. Generalized shear: conformal transformations	88
2.23. Cylindrical annuli	90
III. FINITE PLANE STRAIN	96
3.1. Plane strain superposed on uniform finite extension	97
3.2. Airy's stress function	99
3.3. Stress-strain relations: equations of equilibrium	102
3.4. Complex variable formulation: geometrical relations	107
3.5. Complex variable: stresses; equations of equilibrium	111
3.6. Incompressible materials: reciprocal equations	114
3.7. Flexure of a cuboid	117
3.8. Generalized shear	120
3.9. Further special solutions for a Mooney material	123
IV. THEORY OF ELASTIC MEMBRANES	126
4.1. Stress resultants and loads: plane sheet	127
4.2. Equations of equilibrium: Airy's stress function	129
4.3. Values of strains and stresses at middle surface	130
4.4. Stress resultants: equations of equilibrium	134
4.5. Geometrical relations for a deformed shell	135
4.6. Stress resultants and stress couples	136
4.7. Surface conditions	137
4.8. Equations of equilibrium	139
4.9. Stress resultants	139
4.10. Radial deformation of a plane sheet containing a circular hole or inclusion	143
4.11. Axially symmetrical problems	148
4.12. Inflation of a circular plane sheet	152
4.13. Inflation of a spherical shell	160
4.14. Deformation of surface of revolution into one of similar shape	162
V. THEORY OF SUCCESSIVE APPROXIMATIONS	165
5.1. Uniqueness of series solution	166
5.2. Expansion of displacement, strain, and invariants	169
5.3. Expansion of stress: compressible body	170

CONTENTS

xi

5.4. Expansion of stress : incompressible body	172
5.5. Equations of equilibrium : surface stresses	174
5.6. Hydrostatic pressure	175
5.7. Simple extension	176
5.8. Simple shear	177
5.9. Deformation of a cylinder	178
5.10. Torsion of a compressible cylinder : classical theory	180
5.11. Torsion : second order	181
5.12. Simply-connected cross-section	187
 VI. APPROXIMATE SOLUTION OF TWO-DIMENSIONAL PROBLEMS	 189
6.1. Plane strain : isotropic incompressible bodies	190
6.2. Coordinates in the undeformed body	194
6.3. Force and couple resultants	195
6.4. Complex potentials for an infinite body	197
6.5. General theory for two-dimensional problems	200
6.6. Simultaneous solution of first and second boundary value problems	205
6.7. Infinite region containing a circular boundary	208
6.8. Incompressible plane strain : infinite body containing a circular hole	211
6.9. Incompressible plane strain : infinite body containing a circular rigid inclusion	214
 VII. REINFORCEMENT BY INEXTENSIBLE CORDS	 216
7.1. Physical assumptions	216
7.2. Uniform stretching of a plane reinforced sheet	217
7.3. Simple extension of a reinforced incompressible isotropic sheet	220
7.4. Plane deformation of a thin reinforced sheet	222
7.5. Plane deformation of a reinforced sheet : stress resultants	225
7.6. Plane deformation of a reinforced sheet : Airy's stress function	226
7.7. Plane deformation of a sheet reinforced with systems of parallel straight cords	227
7.8. Solutions of constraint equations for a sheet reinforced with initially straight cords	231
7.9. Plane deformation of a network of inextensible cords	235
7.10. Cylindrically symmetrical deformations : constraint conditions	238
7.11. Cylindrically symmetrical problems : stress resultants in a layer of cords	240
7.12. Cylindrical symmetry : forces on the composite body	242
7.13. Flexure of an initially curved reinforced block	246
7.14. Inflation and extension of a cylindrical tube	248
7.15. Combined flexure and homogeneous strain of a reinforced cuboid	250
7.16. Flexure of a reinforced cuboid	252
7.17. Simple extension and flexure of a thin reinforced isotropic sheet	254
7.18. Reinforced bodies and materials subject to constraints	257

VIII. THERMODYNAMICS OF DEFORMATION	259
8.1. Energy equation	259
8.2. Entropy balance	261
8.3. Equations for an elastic body	261
8.4. Incompressible bodies	263
8.5. Heat conduction law	264
8.6. Heat conduction law for isotropic bodies	266
8.7. Heat conduction law for isotropic bodies: alternative form	269
8.8. Classical theory for isotropic bodies	271
IX. STABILITY	273
9.1. Stability	273
9.2. Equations of equilibrium and boundary conditions: stability	275
9.3. Equations of neutral equilibrium	276
9.4. Incompressible bodies	279
9.5. Incompressible bodies: stability condition and neutral equilibrium equations	279
9.6. A general system of constraints	281
9.7. Isotropic bodies	284
9.8. Stability of an incompressible body under all-round tension	284
X. EXPERIMENTAL APPLICATIONS	286
10.1. Nature of the problem	286
10.2. Preliminary investigations	288
10.3. The functional form of W	291
10.4. Experiments on rubber	293
10.5. Pure homogeneous strain of a thin rubber sheet	295
10.6. Pure shear	297
10.7. Simple elongation	299
10.8. Uniform two-dimensional extension	301
10.9. Experiments on torsion	303
10.10. Torsion of a cylindrical rod	307
10.11. Inflation, extension, and torsion of a cylindrical tube	309
10.12. Further experiments	310
XI. RHEOLOGICAL EQUATIONS OF STATE	311
11.1. Kinematic preliminaries	312
11.2. Tensors dependent on rotation	315
11.3. Tensors independent of rotation	316
11.4. Isotropic tensors and matrices	320
11.5. General constitutive equations	322
11.6. Constitutive relations at time t : isotropy	326
11.7. Constitutive relations at time t : aeolotropy	328
11.8. The effect of symmetry	329
11.9. General curvilinear coordinates	332

CONTENTS	xiii
11.10. Stress dependent on displacement gradients and density	336
11.11. Stress dependent on velocity gradients	337
11.12. Stress dependent on displacement gradients, velocity gradients, and density	338
11.13. Hypoelasticity	338
APPENDIX. REDUCTION OF A MATRIX POLYNOMIAL OF TWO MATRICES	342
AUTHOR INDEX	345
SUBJECT INDEX	346
