

## CONTENTS

CHAPTER I: INTRODUCTION	Page
1. The Physical Properties of Fluids . . . . .	1
2. The Microscopic Picture of a Fluid . . . . .	5
2.1 The Picture of a Gas, p. 8; 2.2 Condensation and the Con- densed State, p. 10; 2.3 Fluids in Motion, p. 12; 2.4 Fluid Mixtures, p. 14	
3. The Quantum Theory . . . . .	14
4. Mathematical Technique and Notation . . . . .	16
5. List of Symbols . . . . .	23
CHAPTER II: STATISTICS OF MOLECULAR MOTION	
1. Probability and Averages . . . . .	25
2. Fluid Density . . . . .	27
3. Distribution of Molecular Velocities . . . . .	30
4. Molecular Mechanics of Fluids . . . . .	34
5. Statistical Thermodynamics . . . . .	40
5.1 Proof of Boltzmann's Law 43; 5.2 Some Thermodynamical Relations. . . . .	47
6. Statistical Mechanics of Fluids . . . . .	49
7. The Theory of Partitions . . . . .	53
CHAPTER III: THE STRUCTURE OF FLUIDS AT REST	
1. The Scattering of X-Rays by Fluids. . . . .	57
2. Optical Scattering and Density Fluctuations . . . . .	62
3. The Structure of Fluids. . . . .	64
4. Distribution Functions in General . . . . .	67
5. Some Properties of the Entropy . . . . .	70
6. Radial Distribution . . . . .	74
6.1 Radial Distribution in Liquids 75; 6.2 More Exact Methods .	80
7. Intermolecular Forces . . . . .	82
CHAPTER IV: CONDENSATION AND THE LIQUID STATE	
1. The Nature of Condensation . . . . .	87
2. The Cluster Integrals. . . . .	91
3. The Virial Series . . . . .	94

	Page
4. The Theory of Condensation . . . . .	99
5. Approximate Methods . . . . .	104
6. The Solid State . . . . .	108
7. The Theory of Freezing. . . . .	112
8. The Cell Model for Liquids . . . . .	116
 CHAPTER V: THE STRUCTURE OF FLUIDS IN MOTION	
1. General Considerations . . . . .	122
2. The Evolution of Molecular Distributions . . . . .	126
3. The Theory of Flow . . . . .	130
4. Viscosity and Thermal Conduction . . . . .	135
4.1 Viscosity, p. 136; 4.2 Thermal Conduction, p. 141	
5. Theory of Non-Uniform Fluids . . . . .	145
6. The Friction Constant . . . . .	151
7. Applications of the Theory . . . . .	156
8. Motion of Molecular Clusters . . . . .	160
 CHAPTER VI: COMPLEX FLUIDS AND FLUID MIXTURES	
1. Complex Structures . . . . .	163
2. Fluid Mixtures . . . . .	168
3. Theory of Diffusion . . . . .	174
 CHAPTER VII: FURTHER EQUILIBRIUM PROPERTIES	
1. Elasticity . . . . .	181
2. Surface Tension . . . . .	186
3. The Brownian Motion . . . . .	195
4. The Second Virial Coefficient . . . . .	200
5. Gravity and Boundary Forces. . . . .	203
6. The Dielectric Constant . . . . .	207
 CHAPTER VIII: THE KINETIC THEORY OF FLUIDS	
1. Introductory . . . . .	214
2. Boltzmann's Equation . . . . .	216
2.1 Liouville's Theorem for Gases, p. 217; 2.2 Derivation of Boltzmann's Equation, p. 218	
3. Corrections to Boltzmann's Equation . . . . .	221
4. Solution of Boltzmann's Equation . . . . .	225
4.1 Viscosity and Thermal Conduction . . . . .	225
 CHAPTER IX: THE QUANTUM THEORY OF FLUIDS	
1. General Principles . . . . .	231
1.1 The Classical Theory as a Limit, p. 235; 1.2 Quantum Mechanical States and Operators, p. 237; 1.3 Transition Probabilities, p. 240	

# TABLE OF CONTENTS

IX

	Page
2. Equilibrium in the Quantum Theory . . . . .	242
2.1 Very Low Temperatures. . . . .	247
3. Quantum Statistics. . . . .	252
4. The Quantum Theory of Flow . . . . .	258
REFERENCES . . . . .	262
