Preface	v
List of Symbols	xiii

CHAPTER 1. THE ADVANTAGES AND DISADVANTAGES OF SHOCK WAVE CHEMISTRY

A. General Field of Shock Wave Chemistry	1
B. Other Methods of Studying Fast Chemical Reactions and High Temperature Phenomena	1
C. Nature of Shock Waves	5
D. Advantages of Shock Waves	8
1. Very rapid increases in temperature	8
2. Very high temperatures	8
3. Arbitrary selection of temperature	8
4. Homogeneous heating	8
5. Heating any gases	9
6. Simple apparatus	9
E. Disadvantages of Shock Waves	9
1. Short times	9
2. Fast measuring equipment needed	9
3. Gases most convenient	9
4. Small amounts of material	9
5. Deviations from calculated behaviour	10

CHAPTER 2. THE HYDRODYNAMICAL THEORY OF SHOCK WAVES

A. Historical Summary of the Hydrodynamical Theory of Shock Waves	11
B. Introduction	12
C. The Conservation Equations for One Dimensional Flow	13
D. The Solution of the Conservation Equations for a Perfect Gas of Constant Heat Capacity	20
E. The Solution of the Conservation Equations for a Normally Reflected Shock in a Perfect Gas of Constant Heat Capacity	24

CHAPTER 3. EQUILIBRIUM SHOCK WAVE PROPERTIES FOR REAL GASES	
A. Introduction	31
B. The Shock Wave Properties of a Real Gas with a Constant Heat Capacity	32
C. The Contributions to the Energy Content of a Gas	35
1. Translational energy	36
2. Rotational energy	36
3. Vibrational energy	37
4. Electronic excitation energy	38
5. Energy of sublimation, fusion, vaporization	39
6. Energy of reaction	39
7. Ionization energy	44
D. The Caloric Equation of State	45
E. The Calculation of Incident and Reflected Shock Wave Properties for a Gas with a Temperature Dependent (Variable) Heat Capacity	47
F. Incident and Reflected Shock Wave Properties of Some Real Gases	51
CHAPTER 4. THE THEORY OF THE TRANSITION REGION OF A SHOCK WAVE	
A. Introduction	59
B. Shock Front Thickness	60
1. The continuum theory of shock front thickness—monatomic gases	60
2. The kinetic theory of shock front thickness—monatomic gases	65
3. Theory of shock front thickness—di- and polyatomic gases	68
C. Processes Slow Compared to Front Transit Time	69
1. Introduction	69
2. Endothermic and exothermic reactions—detonation	70
3. A priori calculation of chemical reaction transition regions	73
a. Introduction	73
b. Vibrational relaxation	75
c. Chemical reactions	76
d. The effect of coupling on reaction rates	83
4. Determination of rate constants from measurements	86
a. The transformation of rates from shock wave coordinates to laboratory coordinates	86
b. Vibrational relaxation	88
c. Chemical reactions in general	90
d. Simplified dissociation reaction	92
e. Summary	95
CHAPTER 5. PRODUCTION OF SHOCK WAVES—ESPECIALLY IN SHOCK TUBES	
A. Introduction	96
B. Methods of Producing Shocks	96
1. Wind tunnels	96
2. Projectiles	99
3. Explosions	100
4. Shock tubes	102

C. Theory of Gas Driven Shock Tubes	105
1. Idealized model of shock tube	105
2. Criterion for shock tube length	106
3. Flow produced by the expansion wave in the high pressure section	107
4. Relation of diaphragm pressure ratio, p_4/p_1 , to shock pressure ratio, p_2/p_1	109
5. Methods of increasing the strength of shock waves produced in shock tubes	113
6. Temperature history of gas samples in shock tubes	116
7. Use of shock tubes to produce shock waves in liquids	120
D. Construction and Operation of Shock Tubes	120
E. Deviations of Experiment from Ideal Calculations	124
1. Deviations associated with the shock formation process	125
2. Deviations arising from interactions with the shock tube walls	127
3. Additional deviations from the idealized shock tube performance introduced by the use of reflected shock waves	137
a. Deviations from steady state independent of the boundary layer	138
b. Deviations from one dimensional flow and steady state caused by the boundary layer	139
F. Summary	142
CHAPTER 6. MEASUREMENT OF SHOCK WAVE PROPERTIES	
A. Introduction	143
B. Velocity of Incident Shock	144
1. Electrical probes	144
2. Schlieren or reflectivity	146
3. Piezo-electric gauges	147
4. Heated wires and foils	147
5. Light emission or absorption	149
6. Pressure switch	152
7. Reflection of micro-waves	153
C. Velocity of Reflected Shock Waves	153
D. Flow Velocity	154
E. Free Surface Velocity	155
F. Density	155
1. Interferometer	155
2. Schlieren	158
3. Reflectivity	159
4. X-ray absorption	160
5. Electron beam densitometers	161
6. Light absorption and emission	162
7. Electron and ion density	168
8. Mass spectra	169
G. Temperature	170
H. Pressure	174
I. Starting Pressure Ratio	176
J. Product Analysis	176
K. Conclusion	177

CHAPTER 7. SHOCK WAVE EXPERIMENTS OF CHEMICAL INTEREST

A. Introduction	179
B. Equilibrium Properties	181
1. Equation of state of gases at high temperatures	181
a. Introduction	181
b. The dissociation energy of nitrogen	182
c. The dissociation energy of cyanogen	184
2. The equation of state of condensed phases at high pressures	186
C. Gas Spectra at High Temperatures and Transport Processes	188
1. Introduction	188
2. Emission and two body recombination in bromine	188
D. Rate of Approach to Equilibrium	191
1. Introduction	191
2. Shock front thickness	192
a. Introduction	192
b. Optical reflectivity method	193
3. Vibrational relaxation	197
a. Introduction	197
b. Rate of increase of overtone emission by CO	200
4. Endothermic chemical reactions	203
a. Introduction	203
b. Rate of dissociation of bromine	206
5. Exothermic chemical reactions	211
a. Introduction	211
b. The measurement of ignition temperatures of explosive mixtures using shock waves	212
c. Measurement of induction times and the kinetics of exothermic reactions	214
APPENDIX I. GENERAL REFERENCES ON SHOCK WAVES	
A. Books	329
B. Review Articles	330
APPENDIX II. LIST OF CONSTANTS	331
AUTHOR INDEX	335
SUBJECT INDEX	345
