

Table of Contents

Preface

Chapter I—Kinematic Introduction

§ 1. Preliminaries	1
§ 2. Fundamental quantities describing the deformation	2
§ 3. A minimum theorem in the kinematics of large deformations	6

Chapter II—Basic Equations of the Statics of Continuous Media

§ 1. Eulerian expressions of fundamental equations	8
§ 2. Lagrangean expressions of fundamental equations	9
§ 3. Thermodynamic potential	10

Chapter III—Isotropic Bodies—Thermodynamic Potential

§ 1. Isotropic bodies	12
§ 2. Principal properties of the thermodynamic potential	16
§ 3. A property of the thermodynamic potential	17
§ 4. Elasticity of second grade. SIGNORINI's thermodynamic potential	20
§ 5. On the most general elasticity of second grade	25
§ 6. A new type of thermodynamic potential proposed by TOLOTTI	27
§ 7. A type of thermodynamic potential proposed by BORDONI	29

Chapter IV—Transformations Depending on a Parameter. Successive Equations of Elasticity

§ 1. Displacements depending on a parameter	31
§ 2. Successive systems. Linear elasticity	34
§ 3. Necessary conditions for the existence of solutions of the successive systems of equations	35
§ 4. On the conditions of compatibility of the successive systems of equations when constraints are present	38
§ 5. An example of a solution of order one	41
§ 6. Successive systems of equations for X_{rs}	42
§ 7. The second-order theory of RIVLIN.	46

Chapter V—Analytical Problems Regarding the Fundamental Equations of Isothermal Static Elasticity

§ 1. Preliminaries	47
§ 2. Fundamental hypotheses. Statement of the theorems of existence and uniqueness in the case of a principal orientation of infinite order	48
§ 3. Demonstration of Theorem A)	49
§ 4. On the expansion of the solution of the basic set of equations in a power series in θ when there is no axis of equilibrium	53

§ 5. On the existence of solutions and the possibility of expanding them in power series in θ when there is an axis of equilibrium	56
§ 6. Theorems of existence and uniqueness for the linear equations of isothermal static elasticity	59
Chapter VI—Inequalities for the Equilibrium of Slightly Deformable Elastic Bodies	
§ 1. Preliminaries	62
§ 2. Integral properties	62
§ 3. A basic inequality	64
§ 4. A few consequences of inequality (6.16)	66
§ 5. A new general inequality	67
§ 6. Application of (6.28) to the equilibrium of cylindrical bodies	69
§ 7. On the best a_i in a case similar to that of uniform bending	72
§ 8. Rectangular prism. A geometrical interpretation of the results	74
§ 9. Inequalities concerning the equilibrium of an arc	76
§ 10. Inequalities regarding the deformation of slightly deformable bodies	77
§ 11. On the deformation of a homogeneous elastic shell under pressure	81
§ 12. New inequalities regarding the displacements	84
§ 13. On the variation of temperature in an adiabatic transformation	86
§ 14. Upper bounds for displacements and stresses	87
§ 15. Other upper bounds for the stresses	89
Chapter VII—Integration of the Fundamental Problem of Static Elasticity	
§ 1. Preliminaries	92
§ 2. Analytical preface to the integration of the static elasticity problem	94
§ 3. Polynomial approximations of stress components	95
§ 4. Integration method	98
§ 5. Validity of MENABREA's theorem in non-isothermal cases	100
§ 6. Adaptation of the integration method of § 4 to non-isothermal cases	102
§ 7. On the integration of the basic problem of isothermal elastic statics in the case of finite deformation	103
§ 8. Integration method of M. PICONE	107
§ 9. On integration of the static problem of the homogeneous plate of arbitrary thickness	110
§ 10. SAINT-VENANT's problem	115
Chapter VIII—Plane Elasticity	
§ 1. Preliminaries	120
§ 2. Structure of AIRY's stress function in the problem of plane deformations	122
§ 3. Meaning of the coefficients of the singular part of AIRY's function in the case of plane deformations	124
§ 4. Structure of AIRY's function in the problem of plane stress independent of y_3	128
§ 5. Structure of AIRY's function in the problem of plane stress depending on y_3	129

Chapter IX—Hypo-Elasticity

§ 1. Preliminaries	131
§ 2. Basic equations of hypo-elasticity	132
§ 3. Hypo-elastic equilibrium	135
§ 4. Lagrangean form of the equations of hypo-elasticity	137
§ 5. On the solution of the equations of hypo-elasticity in the static case for the body of grade zero	138
§ 6. Some considerations concerning the solution of the general problem of hypo-elastic statics	139

Chapter X—Asymmetric Elasticity

§ 1. Preliminaries	141
§ 2. Basic Eulerian equations	143
§ 3. Basic Lagrangean equations	145
§ 4. Use of the thermodynamic potential	148
§ 5. Equilibrium equations in the linear theory	151
§ 6. Isothermal elastic potential for the small deformations of isotropic bodies	152
§ 7. Recapitulation of the general equations valid in the case of infinitesimal isothermal transformations	156
§ 8. Discussion of an example	158
