PREFACE	<i>page</i> vii
NOMENCLATURE	x
CHAPTER 1 INTRODUCTION	1
1.1 Swirl Flow Characterization	1
1.2 Generation of Swirl Flows	6
1.3 Basic Effects of Swirl	10
1.4 Theoretical Techniques	16
1.5 Experimental Techniques	29
1.6 Swirl Flows in Practice	49
1.7 Reciprocating Engines	50
1.8 Gas Turbine Engines	54
1.9 Furnaces, Burners and Cyclones	58
CHAPTER 2 SWIRL STABILIZED FLAMES	71
2.1 Flame Stabilization	71
2.2 Flame Stabilization in Premixed Flames	77
2.3 Turbulence Energy Spectrum	81
2.4 Effect of Turbulence on Flame Speed and Combustion	84
2.5 Stirred Reactor Theory of Combustors	89
2.6 Flame Stabilization by Bluff Bodies	95
2.7 Flame Stabilization by Swirl	103
2.8 Flame Stabilization in Gas Turbine Engines	108
CHAPTER 3 LOW SWIRL PHENOMENA	119
3.1 Swirling Jets	119
3.2 Swirling Flames	129
3.3 Vortex Effect and Fire Whirls	135
3.4 Turbulence Characteristics in Swirl Flows	142
3.5 Weakly Swirling Flow Prediction	165
CHAPTER 4 HIGH SWIRL PHENOMENA	167
4.1 Basic Phenomena	167

4.2	Recirculation Zones	172
4.3	Stability, Vortex Breakdown and the Precessing Vortex Core	187
4.4	Combustion Effects	218
4.5	Industrial Swirl Burner/Combustor Combinations and Fuel Type Effects	240
4.6	Strongly Swirling Jet Prediction	253
4.7	Strongly Swirling Flame Prediction	267
4.8	Applications to Swirl Burner Design	288
CHAPTER 5	CYCLONE SEPARATORS AND COMBUSTORS	295
5.1	General Concepts	295
5.2	Cyclone Separators	299
5.3	Cyclone Combustion Chambers	314
5.4	Cyclone chambers, Combustors, Vortex Breakdown and the Precessing Vortex Core	334
5.5	Prediction of Cyclone Chamber Flowfields	338
5.6	The Gaseous Fission Rocket	350
5.7	The Ranque-Hilsch Tube	352
5.8	Tangential Fired Furnaces	359
5.9	Incineration of Hazardous Wastes	365
CHAPTER 6	SWIRL FLOWS IN PRACTICAL COMBUSTION SYSTEMS	377
6.1	Industrial Flames	377
6.2	Gas Turbine Combustors	393
6.3	Internal Combustion Engines	417
6.4	Combustion Noise Emission and Reduction from Flames	437
6.5	Combustion Instability and Associated Noise	461
INDEX		473
