<i>Preface</i>	xiii
<i>Acknowledgments</i>	xvii

Part I

DISCRETIZATIONS OF THE PRIMITIVE VARIABLE FORMULATION

1 A Primitive Variable Formulation	3
1.1 Function Spaces, Norms, and Forms	4
1.2 A Galerkin-Type Weak Formulation	7
2 The Finite Element Problem and the Div-Stability Condition	9
2.1 The Discrete Finite Element Problem	9
2.2 The Div-Stability Condition	10
2.3 Error Estimates and Other Results Concerning the Approximate Solution	13
2.4 Verifying The Div-Stability Condition	16
2.5 Examples of Unstable Spaces Including the Bilinear-Constant Pair	21

3 Finite Element Spaces	25
3.1 Piecewise Linear and Bilinear Velocity Fields	26
3.2 The Taylor–Hood Element Pair	31
3.3 Bubble Elements, the $Q_2 - P_1$ Element Pair, and Other Elements of Interest	35
3.4 Fourth Degree or Higher Piecewise Polynomial Velocity Spaces	37
3.5 Circumventing the Div-Stability Condition	42
3.6 Divergence Free and Mass Conserving Elements	46
3.7 Three-Dimensional Elements	48
3.8 Remarks on the Choice of Finite Element Spaces	50
4 Alternate Weak Forms, Boundary Conditions, and Numerical Integration	53
4.1 Alternate Formulations of the Convection Term	53
4.2 Inhomogeneous Velocity Boundary Conditions	54
4.3 Alternate Boundary Conditions and Formulations of the Viscous Term	57
4.4 The Effects of the Use of Numerical Quadratures	63
5 Penalty Methods	69
5.1 The Penalty Method for the Continuous Problem and Its Discretization	70
5.2 The Discrete Penalty Method	73
Part II	
SOLUTION OF THE DISCRETE EQUATIONS	
6 Newton’s Method and Other Iterative Methods	81
6.1 Newton’s Method	81
6.2 A Fixed Jacobian Method	84
6.3 A Simple Iteration Method	86
6.4 Broyden’s Method	88
6.5 A Solution Method Using an Equivalent Optimization Problem	91
7 Solving the Linear Systems	95
7.1 Reducing the Number of Unknowns	96
7.2 A Substructuring Method	98

8 Solution Methods for Large Reynolds Numbers	105
8.1 Continuation Methods	105
8.2 The Reduced Basis Method	108

Part III

TIME-DEPENDENT PROBLEMS

9 A Weak Formulation and Spatial Discretizations	117
9.1 A Weak Formulation for the Time-Dependent Problem	117
9.2 Spatial Discretizations	119
10 Time Discretizations	123
10.1 Single-Step Fully Implicit Methods	124
10.2 Semi-Implicit Single-Step Methods	125
10.3 Backward Differentiation Multistep Methods	126
10.4 A Class of Semi-Implicit Multistep Methods	128

Part IV

THE STREAMFUNCTION-VORTICITY FORMULATION

11 Algorithms for the Streamfunction-Vorticity Equations	135
11.1 Boundary Conditions for the Streamfunction-Vorticity Equations	136
11.2 Function Spaces and Forms	139
11.3 A Weak Formulation and Its Associated Natural Boundary Conditions	141
11.4 Finite Element Discretizations	142
11.5 The Recovery of the Pressure Field	144
11.6 Available Error Estimates	145
12 Solution Techniques for Multiply Connected Domains	149
12.1 Newton's Method With the Use of Semi-Local Basis Functions	150
12.2 Solution Methods Using Only Local Basis Functions	151

Part V
THE STREAMFUNCTION FORMULATION

13 Algorithms for Determining Streamfunction Approximations	157
13.1 Weak Formulations for the Streamfunction Equations	158
13.2 Finite Element Spaces	159
13.3 Error Estimates	163
13.4 Recovery of the Velocity and Pressure	165

Part VI
EIGENVALUE PROBLEMS CONNECTED WITH STABILITY STUDIES FOR VISCOUS FLOWS

14 Energy Stability Analysis of Viscous Flows	171
14.1 The Eigenvalue Problem Associated with Energy Stability	171
14.2 Finite Element Approximations	175
15 Linearized Stability Analysis of Stationary Viscous Flows	177
15.1 The Eigenvalue Problem Associated with Linearized Stability	177
15.2 Finite Element Approximations	178

Part VII
EXTERIOR PROBLEMS

16 Truncated Domain-Artificial Boundary Condition Methods	183
16.1 Truncated Domain Problems	183
16.2 Function Spaces	184
16.3 Weak Formulations and Error Estimates for the Truncated Problems	186
16.4 Finite Element Approximations	188

Part VIII
NONLINEAR CONSTITUTIVE RELATIONS

17 A Ladyzhenskaya Model and Algebraic Turbulence Models	193
17.1 A Ladyzhenskaya Model and Its Relation to Algebraic Turbulence Models	193
17.2 Finite Element Approximations	196
18 Bingham Fluids	201
18.1 Variational Inequalities Associated with Bingham Fluids	201
18.2 Finite Element Approximations	204

Part IX
ELECTROMAGNETICALLY OR THERMALLY COUPLED FLOWS

19 Flows of Liquid Metals	209
19.1 A Coupled Navier–Stokes–Maxwell Equation Model	209
19.2 Finite Element Approximations	211
19.3 Iterative Solution Techniques	213
20 The Boussinesq Equations	217
20.1 The Boussinesq Model for Thermal Conduction in Fluids	217
20.2 Finite Element Approximations	219
20.3 Iterative Solution Techniques	221

Part X
REMARKS ON SOME TOPICS THAT HAVE NOT BEEN CONSIDERED

21 Problems, Formulations, Algorithms, and Other Issues That Have Not Been Considered	227
<i>Bibliography</i>	241
<i>Index of Symbol Definitions</i>	259
<i>Author Index</i>	261
<i>Subject Index</i>	265
