I FUNDAMENTALS OF FLUID DYNAMICS

1	Equations for Fluid Statics and Dynamics	1
1.1	Fluids in Static Equilibrium	2
1.2	Fluid Dynamics	8
1.3	Potential Flow	33
1.4	Introduction to Viscous Flow	62
1.5	Introduction to Turbulent Flow and Mixing	83
	References	88
2	Properties of Fluids	91
2.1	Water and Steam	92
2.2	Seawater	102
2.3	Air	128
2.4	Common Gases	136
2.5	Lubricating Oils	137
2.6	Common Petroleum Based Fuels	146
2.7	Thermodynamic and Transport Combustion Properties of Hydrocarbons with Air	162
2.8	Cryogenic Gases	182
2.9	Hydraulic Fluids	188
2.10	Heat Transfer Fluids	189
2.11	Acoustics	193
2.12	Surface Tension	198
2.13	Properties of Selected Elements	199
2.14	Refractive Indices	202
2.15	Electrical Conductivity	202
2.16	Laminar Diffusion Coefficients	203
2.17	Units, Constants, and Conversion Tables	204
	References	217
3	Non-Newtonian Liquids	223
3.1	Introduction	224
3.2	Rheometry and Material Functions	229
3.3	Generalized Newtonian Fluid Models	242

xiii

3.4	Linear Viscoelastic Fluid Models	255
3.5	Nonlinear Viscoelastic Fluid Models	259
3.6	Kinetic Theories and Rheological Properties	287
	Acknowledgments	300
	References	300
4	Flow of Fluids with Viscosity and Thermal Conductivity	303
4.1	Introduction	304
4.2	Laminar Incompressible Boundary Layers	308
4.3	Boundary-Layer Stability and Transition	318
4.4	Turbulence and Turbulence Modeling	354
4.5	Turbulent Boundary Layers	365
4.6	Influence of Heat Transfer and Compressibility on Boundary Layer Flow	374
4.7	Influence of Injection and Suction on Boundary Layer Flow	383
4.8	Aspects of Time-Dependent and 3-D Boundary Layer Flows	389
4.9	Separated Flows	397
4.10	Shear Layers	422
4.11	Jets	432
4.12	Wakes	448
4.13	Mass Transfer in Boundary Layers	456
4.14	Non-Newtonian Boundary Layer Flows	466
	References	470
5	Internal Flows	483
5.1	Introduction	483
5.2	Flows in Straight Constant Area Ducts	484
5.3	Effects of Curvature and Rotation	506
5.4	Converging and Diverging Ducts	514
5.5	Secondary Flows	523
5.6	Separated Internal Flows	531
	References	538
6	Waves in Fluids	545
6.1	Introduction	545
6.2	Kinematic Waves	546
6.3	Linear Dispersive Waves	547
6.4	Nonlinear Dispersive Waves	550
6.5	Internal Waves	552
	References	552
7	Thermodynamics for Fluid Flow	555
7.1	Introduction	555
7.2	Equation of State	557

7.3	First Law of Thermodynamics	559
7.4	Reversible and Irreversible Processes	561
7.5	The Second Law of Thermodynamics	563
7.6	Helmholtz Function and Gibbs Function	564
7.7	Adiabatic Reversible Processes	566
7.8	Equilibrium Conditions	569
7.9	Nonreacting Mixtures	569
7.10	Chemical Reactions	571
7.11	Dissociation and Ionization	573
	References	576
8	Fundamentals of Compressible Flow	577
8.1	Introduction	577
8.2	Isentropic Flow	578
8.3	Steady One-Dimensional Flow	580
8.4	Shock Waves	595
8.5	Prandtl–Meyer Flow	606
8.6	Nozzle Flow	609
8.7	Method-of-Characteristics	613
	References	615
9	Transonic Flow	617
9.1	Introduction	617
9.2	Flow Patterns over Airfoils and Wings	618
9.3	Example Flowfield Computation	625
9.4	Summary	627
	References	627
10	Hypersonic Flow	629
10.1	Hypersonic Flow—What Is It?	629
10.2	Newtonian Theory	636
10.3	Other Simple Hypersonic Pressure Distribution Theories	643
10.4	Mach Number Independence	645
10.5	Hypersonic Similarity	646
10.6	Hypersonic Boundary Layers and Aerodynamic Heating	649
10.7	Hypersonic Viscous Interaction	662
10.8	High Temperature Effects	665
10.9	Summary	669
	References	669
11	Rarefied Gas Dynamics	671
11.1	Introduction	671
11.2	Molecular Models	673
11.3	Mean Free Path	675

11.4 Distribution Functions 676
11.5 The Boltzmann Equation 681
11.6 Gas-Surface Interaction 683
11.7 Forces and Heat Transfer in Free-Molecular Flow 685
11.8 Hurlbut-Sherman Development of the Nocilla Model 686
11.9 Flow Through Orifices and Tubes 688
11.10 Transitional Flow 689
11.11 Velocity Slip and Temperature Jump 691
11.12 Direct Simulation Monte Carlo Method 693
References 693

12 Unsteady Flows 697

12.1 Nature of Unsteady Motion 697
12.2 Unsteady Flow of an Inviscid Fluid 700
12.3 Unsteady Unseparated Laminar Flows 702
12.4 Unsteady Separated Flows 708
12.5 Conclusions 726
References 727

13 Complex Flows 733

13.1 Vortex Flows 735
13.2 Rotating Flows 741
13.3 Flows with Significant Body Forces 758
13.4 Jets in a Cross Flow 774
13.5 Flow in Porous Media 818
13.6 Instability of Separated/Swirling Flows and Flow-Acoustic Coupling 823
13.7 Stratified Flow 832
13.8 Magnetofluidmechanics 841
References 871

14 Multiphase Multicomponent Flows 883

14.1 Gas-Liquid Flows 884
14.2 Gas-Solid Flows 900
14.3 Liquid-Liquid Flows 909
14.4 Solid-Liquid Flows 911
14.5 Three-Phase Flows 917
References 918
