

Contents

§1. Terminology; Velocity Fields, Particle Paths, Spatial and Material Coordinates...	1
§2. Some Examples of Fluid Motions...	5
§3. Some Preliminary Mathematics; An Algebraic Lemma and a Review of Vector Calculus...	12
§4. Flow of a Vector Field...	20
§5. The Transport Theorem...	22
§6. Conservation of Mass...	26
§7. Balance of Momentum; Cauchy's Stress Principle...	28
§8. Balance of Momentum; Equations of Motion...	32
§9. Perfect Fluids and Euler's Equations...	34
§10. Potential Flow...	37
§11. The Kutta-Joukowski Theorem and the paradox of lift...	41
§12. Energy of a Fluid and the Deformation Tensor...	50
§13. Momentum Transfer Equation and d'Alembert's Paradox...	56
§14. Kelvin's Circulation Theorem...	61
§15. The Helmholtz Theorems...	67
§16. Viscous Fluids and the Navier-Stokes Equation...	71
§17. The Reynolds Number Re ...	83
§18. Stability, Bifurcation and Large Reynolds Numbers...	90
§19. A Brief Survey of Thermodynamics...	99
§20. Ideal Compressible Flow...	106
§21. Shock Waves...	112
§22. Boundary Layers...	126

§23. Remarks on Turbulence Theory... 142

Appendices.

A. Some Vector Identities... 158

B. Vector Calculus Formulae and the
Navier-Stokes Equations in Cylindrical
and Spherical Coordinates... 159

C. The Stress Tensor for a Viscous
Incompressible Fluid... 162
