TURBULENCE

GROUP SUMMARY: Quasi-Equilibrium Turbulent Flows

<i>T. B. Gatski</i>	5
---------------------------	---

On Prediction of Equilibrium States in Homogeneous Compressible Turbulence

<i>Ridha Abid</i>	9
-------------------------	---

Near-Wall Turbulence Models and Their Application to Flow in a Square Duct

<i>H. Aksoy and R. M. C. So</i>	23
---------------------------------------	----

SGS Modeling in the Near-Wall Region of Turbulent Flows

<i>Carlos Härtel</i>	39
----------------------------	----

Evaluation of Inhomogeneous Formulations of the Dynamic Subgrid-Scale Model

<i>Evangelos T. Spyropoulos and Gregory A. Blaisdell</i>	51
--	----

On Elliptic Relaxation Near Wall Models

<i>A. O. Demuren and R. V. Wilson</i>	61
---	----

Some Turbulence Statistics Relevant to Compressible Turbulence Modeling

<i>S. P. G. Dinavahi, J. R. Ristorcelli, and G. E. Erlebacher</i>	73
---	----

Testing a Model for the Turbulent Mass Flux

<i>J. R. Ristorcelli and S. P. G. Dinavahi</i>	83
--	----

Assessment of the SSG Pressure-Strain Model in Complex Turbulent Shear Flows

<i>Bassam A. Younis, Thomas B. Gatski, and Charles G. Speziale</i>	95
--	----

GROUP SUMMARY: Renormalization Group Theory and Turbulence Modeling

<i>Ye Zhou</i>	107
RNG on Wavelet and Non Fourier Representations – Applications to Nonhomogeneous and Wall Bounded Flows	
<i>Gal Berkooz, Juan Elezgaray, George Vahala, and Ye Zhou</i>	109
On RNG Theory and the Decay Law of Homogeneous Isotropic Turbulence	
<i>S. H. Lam</i>	119
Renormalization Group Theory Modeling for a Stratified Turbulence	
<i>D. N. Riahi</i>	133
RNG for CFD? An Assessment of Current RNG Theories of Turbulence	
<i>Ye Zhou, George Vahala, David McComb, and Sau-hai Lam</i>	137
The Yakhot-Orszag Theory and Local Interactions	
<i>R. Rubinstein</i>	163
The Application of a Recursion RNG-Based Turbulence Model for Separated Flows	
<i>Siva Thangam, Ye Zhou, and George Vahala</i>	167
An Overview of RNG Methods in Turbulence Modeling: Panel Discussion Summary	
<i>Ye Zhou and Charles G. Speziale</i>	179

COMBUSTION

GROUP SUMMARY: Counter-Jet Diffusion Flames

<i>Phil Drummond</i>	201
Characteristics of Stretched Hydrogen-Air Diffusion Flames at High Pressures	
<i>K. M. Isaac</i>	203

Linear Response of Twin Premixed Flames in a Counterflow to Small Disturbances <i>T. L. Jackson and M. Matalon</i>	217
Raman Scattering Imaging of Opposed Jet Diffusion Flames <i>R. W. Pitz, T. M. Brown, and S. P. Nandula</i>	227
The Influence of Contaminants on the Structure of Nonpremixed Hydrogen-Air Flames <i>K. Seshadri</i>	239
GROUP SUMMARY: Turbulent Combustion	
<i>T. L. Jackson</i>	251
Diffusion-Reaction System Model for Turbulent Combustion <i>Sharath S. Girimaji</i>	253
The Lamellar Description of Mixing in Turbulent Flows <i>Farhad A. Jaber and Peyman Givi</i>	265
Study of Ignition of a Diffusion Flame in the Field of a Vortex Pair <i>F. Kozusko, Michèle G. Macaraeg, and T. L. Jackson</i>	275
GROUP SUMMARY: Shock-Induced Combustion/Detonation	
<i>Ajay Kumar</i>	287
Unsteady Shock-Induced Combustion Past Blunt Bodies <i>Ajay Kumar and D. J. Singh</i>	289
Characteristic and Finite-Wave Shock-Fitting Boundary Conditions for Chebyshev Methods <i>Mark H. Carpenter, Harold L. Atkins, and D. J. Singh</i>	301
Evolution of a Compressible Pulse in a Reactive Atmosphere: Transition to Detonation <i>James J. Quirk, T. L. Jackson, and A. K. Kapila</i>	313
Numerical Soot Traces: "The Writing's on the Wall" <i>James J. Quirk</i>	331
CONTENTS Volume I	339
