Preface	xi
PART 1: OSCILLATIONS	
Review of elementary concepts and examples	3
Introduction	3
Harmonic motion defined	4
The mass-spring oscillator	7
Examples of harmonic motion	11
The two-body oscillator. Reduced mass	19
Two-dimensional oscillator	24
Nonlinear oscillations	26
Forced harmonic motion	28
Free damped motion	31
Problems	32
The complex amplitude	37
A review of complex numbers	37
Euler's formula	40
The complex amplitude of a harmonic function	43
Discussion	47
Examples	48
Problems	50
Forced oscillations and frequency response	51
Electro-mechanical analogies	51
Frequency response	53
Impedance and admittance	64
Power transfer	67
Sources of vibration	70
Examples	71
Fourier analysis	72

vi Contents

3.8	Arbitrary driving force	81
	Examples	82
	Problems	87
4	Free oscillations and impulse response	92
4.1	Free oscillations	92
4.2	Impulse response	99
4.3	Response to an arbitrary driving force	101
4.4	Transition to steady state	103
4.5	Discussion	107
	Examples	109
	Problems	111
5	Coupled oscillators	113
5.1	Forced harmonic motion	113
5.2	Free motion. Normal modes	121
5.3	Weakly coupled oscillators. Beats	125
5.4	Impulse response	129
5.5	Orthogonality. Configuration space	134
5.6	Unequal coupled oscillators	138
	Examples	147
	Problems	147
	PART 2: WAVES	
(1.50

6	Fundamentals of waves	153
6.1	What is a wave?	153
6.2	Description of waves (kinematics)	154
6.3	Dynamics. Field equations	166
6.4	Harmonic waves and complex amplitude equations	173
6.5	Examples of waves	177
6.6	Simple demonstrations	180
6.7	Wave power	182
6.8	Wave pulse	185
6.9	Waves in two and three dimensions	187
	Examples	190
	Problems	192
7	Wave reflection, transmission, and absorption	197
7.1	Wave reflection at a junction	197
7.2	Energy absorption at a termination	203
7.3	Wave reflection and elastic collisions	208
	Examples	209
	Problems	210
8	Resonances and normal modes	213
8.1	Forced harmonic waves	213
8.2	Forced harmonic motion of the real mass-spring oscillator	217
8.3	Free oscillations and normal modes	219

Contents

8.4	Normal mode expansion. Fourier series	225
8.5	Continuous harmonic force distribution	235
8.6	Normal modes in two and three dimensions	238
8.7	Density of normal modes	240
	Examples	241
	Problems	242
9	Electromagnetic waves	246
9.1	Review of units	246
92	EM waves on a cable reconsidered	210
93	Maxwell's equations	250
94	Plane EM waves	255
95	Generation of FM waves	255
9.6	Polarization	256
9.7	Dispersion of FM waves	200
5.1	Examples	274
	Problems	282
4.0		205
10	Acoustic waves in fluids	286
10.1	Description of fluid motion	286
10.2	Fluid equations	288
10.3	Acoustic field equations	291
10.4	Spherical waves	295
10.5	The acoustic spectrum	298
10.6	Measurements	299
	Problems	304
11	Wave interference and diffraction	306
11.1	Interference of two plane waves	306
11.2	Interference of waves from an array of sources	311
11.3	Continuous source distribution	319
11.4	Diffraction	324
11.5	Diffraction limited resolution	332
11.6	Coherence and incoherence	336
	Examples	337
	Problems	341
12	Refraction and reflection	343
12.1	Trace velocity and Snell's law	343
12.2	Acoustic reflection and transmission coefficients	346
12.3	EM reflection and transmission coefficients	349
12.4	Total reflection	352
12.5	Refraction in a moving medium	354
12.6	Inhomogeneous medium	356
	Examples	361
	Problems	363
13	The Doppler effect	366
13.1	Mechanical waves	366

vii

viii Contents

13.2	Electromagnetic waves Problems	376 381
14 14.1 14.2 14.3 14.4 14.5 14.6	Periodic structures. Dispersion Wave transmission on a mass-spring lattice Wave packet and group velocity Wave impedance and energy flow Wave attenuation Normal modes of a one-dimensional lattice General motion and impulse response of a periodic lattice Problems	383 383 388 395 397 400 404 406
15 15.1 15.2 15.3 15.4	Wave guides and cavities Propagating and decaying waves Acoustic waves in a rectangular wave guide EM waves in a rectangular wave guide Normal modes in a rectangular cavity Problems	409 409 414 421 425 427
16 16.1 16.2 16.3 16.4 16.5 16.6	Matter waves Review Free particle wave function The Uncertainty Principle Effect of potential. Barrier penetration Refraction of matter waves Stationary states. Schroedinger equation Problems	430 430 433 435 437 440 442 447
	PART 3: SPECIAL TOPICS	
17 17.1 17.2 17.3 17.4 17.5 17.6 17.7	Radiation and scattering Sound radiation from a pulsating sphere Multipole sources Nonuniform spherical source. Spherical harmonics Radiation from a continuous source distribution Huygens' principle and scattering Acoustic scattering Electromagnetic scattering Problems	451 451 455 459 464 467 468 472 475
18 18.1 18.2 18.3 18.4 18.5 18.6	Surface waves on a liquid Waves on shallow water Surface tension Waves on deep water. Effect of surface tension Effect of viscosity Thermal ripples and Brillouin scattering Liquid–liquid interface. Critical phenomenon Problems	478 478 484 488 492 495 503 505

Contents

19	Plasma oscillations and hydromagnetic waves	507
19.1	The plasma state	507
19.2	Longitudinal waves. (Plasma oscillations)	511
19.3	Transverse waves. (Hydromagnetic or Alfven waves)	517
	Problems	521
20	Waves in solids	523
20.1	Longitudinal waves in a rod	523
20.2	Shear waves	527
20.3	Wave reflection. Energy considerations	529
20.4	Bending waves on a plate	530
20.5	Displacement, deformation, and rotation	534
20.6	Stress-strain relation	540
20.7	Relations between elastic constants	543
20.8	Longitudinal and transverse waves	545
20.9	Wave conversion	549
20.10	The Rayleigh wave	551
20.11	Seismology	555
	Problems	558
21	Feedback oscillations	560
21.1	The frequency equation	560
21.2	Valve instability	565
21.3	Instability of a vortex sheet	573
21.4	Whistles and wind instruments	578
21.5	Lasers	585
21.6	Heat maintained oscillations. The Rijke tube	586
	Examples	588
	Problems	589
	Index	591
