

# *CONTENTS*

List of Contributors	v
Preface	xi
<b>I. Hypervelocity Accelerators</b>	
A. J. CABLE	
I. Introduction	1
II. Gun Accelerators	2
III. Explosive Accelerators	11
IV. Summary	16
References	18
<b>II. Stress Wave Propagation in Solids</b>	
NORRIS L. HICKERSON	
I. Introduction	23
II. Stress Wave Propagation in an Infinite, Elastic Medium	24
III. Stress Wave Propagation in an Elastic Half Space	31
IV. Elastic Waves in Laminated Media	40
V. Summary	42
References	42
<b>III. Theory of Impact: Some General Principles and the Method of Eulerian Codes</b>	
J. K. DIENES AND J. M. WALSH	
I. Introduction	46
II. Late-Stage Equivalence: An Asymptotic Theory for Late Times	50
III. Dimensional Analysis, Self-Similarity, and Late-Stage Equivalence	62
IV. OIL: An Eulerian Hydrodynamic Code	82
V. RPM: The OIL Code with Strength	87
References	102

#### **IV. Theory of Impact on Thin Targets and Shields and Correlation with Experiment**

JOHN W. GEHRING, JR.

I. Introduction	105
II. Theoretical Model—One-Dimensional Analysis	106
III. Theoretical Model—Two-Dimensional Analysis	117
IV. Discussion	154
References	155

#### **V. Numerical Evaluation of Hypervelocity Impact Phenomena**

T. D. RINEY

I. Introduction	158
II. Regimes of Material Response	158
III. Governing Equations	164
IV. Laminated Meteor Bumpers	166
V. Hollowed Projectiles	177
VI. Crater Predictions for Thick Targets	191
References	211

#### **VI. Analytical Studies of Impact-Generated Shock Propagation: Survey and New Results**

WILLIAM J. RAE

List of Symbols	214
I. Introduction	215
II. Formulation of the Problem	217
III. Similarity Requirements	220
IV. The Perfect-Gas Case	226
V. The Real-Fluid Case	261
VI. Concluding Remarks	278
Appendix: Approximate Solution of the Plane Wave, Perfect-Gas Case	282
References	286

#### **VII. The Equation of State of Solids from Shock Wave Studies**

R. G. MCQUEEN, S. P. MARSH, J. W. TAYLOR, J. N. FRITZ,  
AND W. J. CARTER

I. Introduction	294
II. Theoretical Considerations and Calculation Techniques	295
III. The Equation of State of the Standards	310
IV. The Equation of State of Solids	339
V. The Method of Mixtures	373
VI. Elastic-Plastic Flow	389
References	415

**VIII. Metallurgical Observations and Energy Partitioning**

R. B. POND AND C. M. GLASS

I. Hypervelocity and the Cratering Phenomenon	420
II. Historical Development	422
III. Metallurgical Property Influences on Metal Deformation as a Function of Test Velocity	425
IV. The Role of Magnification in Modeling	426
V. Correlating Model and Test Data	427
VI. Supportive Metallurgical Observations	429
VII. Theory of Cratering Based on Metal Properties	436
VIII. Strain Energy Distribution under the Crater	440
IX. The Relation of Energy Balances to Projectile Orientation	444
X. Summary of Energy Balances	450
XI. Energy Balances on 2S Al Prestrained Targets	454
XII. Calculation of Maximum Impact Damage from Material Properties	457
XIII. Conclusions	459
References	459

**IX. Engineering Considerations in Hypervelocity Impact**

JOHN W. GEHRING, JR.

I. Introduction	463
II. Experimental Observations	464
III. Discussion	511
References	512

Appendix A Shock Wave Data for Standard Materials	515
---	-----

Appendix B Shock Wave Data for Porous Materials	516
---	-----

Appendix C Shock Wave Data for Hugoniot Cross Checks	518
--	-----

Appendix D Shock Wave Data for Solids	521
---------------------------------------	-----

Appendix E Calculated Thermodynamic Results for Solids	530
--	-----

<i>Author Index</i>	569
---------------------	-----

<i>Subject Index</i>	576
----------------------	-----
