CHAPTER 1 FUNDAMENTAL EQUATIONS OF TURBULENT BOUNDARY LAYERS

1.1	Equations of motion and heat conduction of a two-dimensional gaseous boundary layer	1
1.2	Turbulent shear and heat exchange in the two-dimensional boundary layer	3
1.3	Integral equations of the boundary layer	5
1.4	Characteristic Reynolds number of the boundary layer	10
1.5	Similarity between the velocity and temperature fields	11

CHAPTER 2 LAWS OF FRICTION AND HEAT TRANSFER

2.1	Skin friction in a two-dimensional boundary layer of a compressible gas	13
2.2	Law of friction	14
2.3	Values of β , z_J and ξ_J when $R \rightarrow \infty$	16
2.4	Limiting friction law	21
2.5	Approximate profile of shear stress	23
2.6	Approximate temperature profile	25
2.7	Coefficient of non-similarity of the fields of velocity and temperature	28
2.8	Limiting law of heat transfer	29
2.9	Approximate profiles of heat flux	31

CHAPTER 3 FLOW ALONG A FLAT IMPERMEABLE PLATE

3.1	Isothermal boundary layer	33
3.2	Coefficient of heat transfer for $\psi \approx 1$	38
3.3	Drag law for the non-isothermal boundary layer	41
3.4	Limiting drag law	42
3.5	Limiting law of heat transfer	46
3.6	Comparison of the limiting law of drag with experimental data for supersonic flow	48
3.7	The plate with an adiabatic strip at the leading edge	58
3.8	Solution of the equations of momentum and energy for the non-isothermal boundary layer with $T_s = \text{const.}$	65

CHAPTER 4 FLOW ALONG A PERMEABLE PLATE

4.1	Statement of the problem	67
4.2	Drag law for the uniform-composition isothermal boundary layer	69
4.3	Law of heat transfer for the uniform-composition, nearly isothermal boundary layer	71
4.4	Calculation of cooling	72

4.5	Laws of drag and heat transfer for the uniform-composition non-isothermal subsonic boundary layer	73
4.6	Law of drag for the isothermal boundary layer of non-uniform composition	77
4.7	Drag law for the subsonic non-isothermal boundary layer of non-uniform composition	86

CHAPTER 5 FLOW OVER CURVED SURFACES

5.1	Limiting parameters for the breakaway of an isothermal boundary layer from an impermeable surface	92
5.2	Condition for the stability of the viscous sub-layer	97
5.3	Approximate relation between the form parameters H and F	99
5.4	Drag law for the isothermal boundary layer on an impermeable surface for $dp/dx \neq 0$	101
5.5	Solution of the momentum equation for the isothermal boundary layer on an impermeable surface	104
5.6	Law of heat transfer in decelerating flows with a near-isothermal boundary layer on an impermeable wall	108
5.7	Solution of the energy equation for the near-isothermal boundary layer in an impermeable wall	111
5.8	Influence of temperature variations on the breakaway parameters for a boundary layer on an impermeable wall	111
5.9	Solution of the equations of energy and momentum for a non-isothermal boundary layer on an impermeable surface in a subsonic gas stream	116
5.10	Solution of the equations of energy and momentum in supersonic flow of a gas	119
5.11	Solution of the equations of energy and momentum for axis-symmetrical flow	120
5.12	Solution of the equations of energy and momentum for subsonic flow of gases along a permeable slightly curved surface	122

CHAPTER 6 FLOW IN DUCTS

6.1	Distribution of velocity, drag and heat transfer for near-isothermal developed flow	126
6.2	Non-isothermal developed flow of a gas	128
6.3	Calculation of drag and heat transfer in the entrance region of a cylindrical pipe	130
6.4	Heat exchange in a duct at the critical pressure	141
	Conclusion	146

APPENDIX I SUMMARY OF THE MAIN FORMULAE

I.1	Flow over impermeable plates	149
I.2	Subsonic flow over a permeable plate (limiting laws)	150
I.3	Critical parameters of boundary-layer breakaway on impermeable wall	151
I.4	Integration of the energy equation	151
I.5	Integration of the momentum equation	153
I.6	Integration of the energy and momentum equations for axis-symmetrical flow	154

APPENDIX II NUMERICAL EXAMPLES

II.1	Heat transfer in a supersonic nozzle		155
II.2	Cooling of a porous plate		155
II.3	Heat transfer in the entry region of a pipe		159
