PREFACE	vii
INTRODUCTION	ix
1. THE EQUATIONS OF MOTION AND THEIR LINEARIZATION	
1.1. Introduction.	1
1.2. Equations of motion.	1
1.3. Deduction of the small perturbation equation.	3
1.4. Introduction of dimensionless parameters.	5
1.5. Linearized equation for the lifting unsteady flow.	7
1.6. Discussion of the properties of the transonic solution.	9
1.7. Generalized aerodynamic forces.	15
1.8. Similarity law for unsteady transonic flow.	18
1.9. Linearized boundary value problem for the planar wing at $M = 1$ .	20
1.10. Transformations of the equations of motion.	21
2. TWO-DIMENSIONAL SOLUTION	
2.1. Introduction.	24
2.2. Direct approach.	24
2.3. Sonic limit of the supersonic solution.	26
2.4. Sonic limit of the subsonic solution.	27
2.5. Strip theory for a wing with swept leading edge.	30
3. LOW ASPECT RATIO WINGS OF TRIANGULAR AND RELATED PLANFORMS	
3.1. Introduction.	32
3.2. Solution by iteration.	32
3.3. Solutions for a delta wing.	35
3.4. Generalized force coefficients.	36
3.5. Stability derivatives for the delta wing.	37
3.6. Influence of planform on damping-in-pitch.	38
4. THE LOW ASPECT RATIO RECTANGULAR WING	
4.1. Introduction.	41
4.2. Approximate solution.	41
4.3. Generalized aerodynamic forces.	48
4.4. Stability derivatives for a cropped delta wing.	51
5. LOW ASPECT RATIO WING-BODY COMBINATIONS	
5.1. Introduction.	55
5.2. Method of solution for arbitrary cross-sectional shape.	55
5.3. Solution for a slowly oscillating winged body of revolution.	57
5.4. Stability derivatives for a configuration with small body-radius-to-wing-span ratio.	61

6. THE SEMI-INFINITE RECTANGULAR WING		PAGE
6.1.	Introduction.	63
6.2.	Solution for the potential function.	63
6.3.	Evaluation of $h_1$ .	67
6.4.	Asymptotic formula for $g_1$ for large values of $v$ .	70
6.5.	Calculation of sectional forces and moments.	72
6.6.	Approximative results for rectangular wings of large aspect ratios.	73
7. THE RECTANGULAR WING OF ARBITRARY ASPECT RATIO WITH CONTROL SURFACE		
7.1.	Introduction.	76
7.2.	Principle of solution.	76
7.3.	Solution of the auxiliary problem.	79
7.4.	Complete solution for the general case.	81
7.5.	Calculation for rigid translational and pitching oscillations.	81
7.6.	Approximate expressions for total forces and moments for large values of $A\sqrt{k}$ .	85
7.7.	Application to a rectangular control surface.	86
8. THE DELTA WING OF ARBITRARY ASPECT RATIO		
8.1.	Introduction.	91
8.2.	Transformation of the boundary value problem to that for a rectangular wing.	91
8.3.	Series solution for the oscillating delta wing.	92
8.4.	Convergence of the series solution.	94
8.5.	Approximate solution for low aspect ratios.	96
9. WINGS OF GENERAL PLANFORMS		
9.1.	Introduction.	99
9.2.	Convex polygonal planforms.	99
9.3.	Calculation of the upwash outside the wing edges.	101
9.4.	Concave polygonal planforms.	104
9.5.	The kernel function method.	107
10. CONTROL SURFACE BUZZ		
10.1.	Introduction.	110
10.2.	Unsteady transonic flow with shock waves.	110
10.3.	Influence of the boundary layer.	120
11. EXPERIMENTAL DETERMINATION OF AIR FORCES ON OSCILLATING WINGS AT TRANSONIC SPEEDS		
11.1.	Introduction.	123
11.2.	Wind tunnel wall interference.	123
11.3.	Experimental methods.	124
11.4.	Results and comparisons with theory.	124
