Contents

1. Fundamental Aspects
By P. A. Libby and F. A. Williams (With 2 Figures) 1
1.1 Background Literature 1
1.2 Turbulence in Reacting Liquids and Gases 2
1.3 The Eulerian Viewpoint and Notation 3
1.4 Transport Properties 4
1.5 Chemical Kinetics 5
1.6 Conservation Equations 8
1.7 Probabilistic Structure 12
1.8 Time Averaging and Favre Averaging 14
1.9 Probability-Density Functions 16
1.10 Intermittency 19
1.11 Fourier Decomposition 22
1.12 Favre-Averaged Conservation Equations 25
1.13 Closure and Additional Transport Equations 26
1.14 Mean Chemical Production 30
1.15 Coherent Structures 35
1.16 Scales and Similarity Numbers 37
1.17 Comparison Between Theory and Experiment 40
References 42

2. Practical Problems in Turbulent Reacting Flows
By A. M. Mellor and C. R. Ferguson (With 14 Figures) 45
2.1 Introductory Remarks 45
2.2 Quasi-steady Flames 46
2.3 Gas Turbine and Furnace Combustors 48
2.4 Internal Combustion Engines 55
References 63

3. Turbulent Flows with Nonpremixed Reactants
By R. W. Bilger (With 6 Figures) 65
3.1 The Conserved Scalar Approach 66
3.1.1 Conserved Scalars 67
3.1.2 The Mixture Fraction and Mixing Patterns 69

3.1.3 Fast Chemistry Assumptions 71
3.1.4 Mean Properties 72
3.1.5 Pdfs of Conserved Scalars 76
3.1.6 The Reaction Rate 80
3.1.7 Application in Homogeneous Turbulence 81
3.1.8 Application in Shear Flows 84
3.1.9 Reaction Zone Structure 86
3.1.10 Pollutant Formation 87
3.2 Two-Variable Approaches 89
3.2.1 Second Variables 89
3.2.2 Chemical Production Term Closure for the Second Variable 90
3.2.3 Perturbation Variables 92
3.2.4 Perturbation Closure of $\bar{w}_i$ 93
3.3 Direct Closure Approaches 96
3.3.1 Moment Closure Methods 96
3.3.2 Pdf Closure Methods 98
3.4 Other Approaches 100
3.5 Spectra and Nondimensional Numbers 101
3.5.1 Spectra 101
3.5.2 Nondimensional Numbers 105
3.6 Turbulence Structure and Modeling 106
3.6.1 Use of Favre Averaging 106
3.6.2 Turbulence Models 108
3.6.3 Flame-Generated Turbulence 109
3.7 Summary 110
References 111

4. Turbulent Flows with Premixed Reactants
By K. N. C. Bray (With 16 Figures) 115
4.1 Introductory Remarks 115
4.2 Review of Experiment 118
4.2.1 Flame Structure 118
4.2.2 Flame Speed 123
4.3 The Premixed Laminar Flame 126
4.4 Review of Theory 129
4.4.1 Regimes of Turbulent Flame Propagation 130
4.4.2 Existence of the Turbulent Flame Speed 132
4.4.3 Wrinkled Laminar Flame Theories 133
4.4.4 Combustion Controlled by Turbulent Mixing 136
4.5 A Unified pdf Model 139
4.5.1 Simple Model: The Progress Variable c 141
4.5.2 Thermochemical Closure for $P(c; x)$ 144
4.5.3 Effects of Turbulence on Reaction Rate 147
4.5.4 Turbulent Transport Model 157

4.5.5 Application to Planar Turbulent Flames 159
4.5.6 Laminar Flamelet pdf Model 166
4.5.7 A Joint pdf Model for Consecutive Reactions 168
4.6 Discussion and Concluding Remarks 176
References 180

5. The Probability Density Function (pdf) Approach to Reacting Turbulent Flows
By E. E. O'Brien 185
5.1 Strategy and Early Developments 185
5.2 Derivation of Single-Point pdf Equations 189
5.3 Closure Approximations 199
5.3.1 One-Point pdf Description 199
5.3.2 The Multipoint Descriptions 205
5.4 Applications of the pdf Method 209
5.5 Summary 214
References 216

6. Perspective and Research Topics. By P. A. Libby and F. A. Williams 219
6.1 Introductory Remarks 219
6.2 Radiative Transfer in Turbulent Flows 221
6.3 Two-Phase Turbulent Flows 223
6.4 Effects of High Mach Number 224
6.5 Effects of Buoyancy 225
6.6 Approaches Identifying Coherent Structures 226
6.7 Perturbation Methods Appropriate to Turbulent Reacting Flows 228
6.8 Numerical Methods Appropriate to Turbulent Reacting Flows. 230
6.9 Outstanding Problems Related to Chemistry 231
6.10 Outstanding Problems Related to Fluid Mechanics 232
6.11 Concluding Remarks 234
References 234
