

CONTENTS

<i>Preface</i>	xi
<i>List of Notation</i>	xv

Chapter One INTRODUCTION AND MATHEMATICAL BACKGROUND

1.1	Introduction	1
1.2	Mathematical Background	4
1.3	Vector Calculus	11
1.4	Vector Integral Theorems	34
1.5	The Rheological Behavior of Fluids	38
	Problems	40
	Bibliography	42

Chapter Two THE PHYSICAL PROPERTIES OF FLUIDS

2.1	Intermolecular Forces	45
2.2	The Continuum Concept	48
2.3	Fluid Statics	56
2.4	Boundary Conditions between Two Fluid Media	62
2.5	Fluid Motion	67
2.6	Transport Phenomena in Fluids	69
2.7	Scalar Intensities	71
2.8	Special Properties of Liquid Fluids	76
2.9	Special Properties of Gases	77
2.10	The Maxwell-Boltzmann Distribution	78
2.11	Fluid Flow Phenomena	89

2.12	Physical Similarity and Dimensional Analysis	93
	Problems	111
	Bibliography	113

Chapter Three FLUID FLOW KINEMATICS

3.1	The Eulerian Equations	115
3.2	The Equation of Continuity (Conservation of Mass)	116
3.3	Streamline	118
3.4	Kinematics of Deformation	120
3.5	Circulation and Vorticity	125
3.6	Irrotational Motion and the Velocity Potential	127
3.7	Boundary Conditions for Ideal Fluids	132
3.8	Types of Potential Problems and Methods of Obtaining Solutions	134
3.9	Example of an Irrotational Flow System	134
3.10	Velocity Field with Nonzero Dilation and Vorticity	136
3.11	Sources and Sinks—Singularities in the Rate of Dilation	139
	Problems	145
	Bibliography	147

Chapter Four THE EQUATIONS OF FLUID MOTION

4.1	Conservation of Momentum	148
4.2	Conservation of Energy—the Energy Equation	152
4.3	Equation of State	156
4.4	Diffusion Equation	157
4.5	Some Exact Solutions of the Navier–Stokes Equations	157
4.6	Unsteady Flow	161
4.7	Laminar Flow near a Rotating Disk	164
4.8	Inviscid Incompressible Flows	169
4.9	Method of Singularities	174
4.10	Superposition of Flows	179
4.11	Drag and Lift for the Cylinder with Circulation	184
4.12	Solution by Change in Variable—Conformal Mapping	186
	Problems	193
	Bibliography	196

Chapter Five VORTEX DYNAMICS

5.1	Vortices and Circulation	198
5.2	Kelvin's Circulation Theorem	199
5.3	Helmholtz Vortex Theorems	200
5.4	Origins of Circulation	201
5.5	Generation of a Vortex Ring by an Impulsive Pressure Acting over a Circular Area	205

5.6	Determination of the Velocity Field from a Given Vortex Field	208
5.7	Two Straight-Line Vortices and Their Motion	209
5.8	The Kármán Vortex Streets	214
5.9	Circular Vortex Filament—Vortex Rings	219
5.10	Viscous Compressible Vortex	232
5.11	Hydrodynamic–Electromagnetic Analogy	237
	Problems	239
	Bibliography	241

Chapter Six VORTICITY AND THE LAMINAR BOUNDARY LAYER

6.1	Introduction	242
6.2	The Vorticity Equation	243
6.3	The Creation of Vorticity	244
6.4	A Point Source of Vorticity	244
6.5	Flow past a Solid Body from Infinity	246
6.6	The Reynolds Number Effect	247
6.7	Equations of Motion	247
6.8	Exact Solutions of the Boundary Layer Equations	250
6.9	Approximate Methods of Solution of the Boundary Layer Equations	258
6.10	Steady Compressible Boundary Layers (in Two-Dimensional Flow)	262
6.11	Problem of Two-Dimensional Steady Compressible Flow	266
6.12	The General Case	270
	Problems	271
	Bibliography	275

Chapter Seven SLOW VISCOUS FLOW

7.1	Introduction	276
7.2	Stokes Flows	277
7.3	Two-Dimensional Flows	278
7.4	Three-Dimensional Stokes Flows	284
7.5	Criticism of Stokes's Solution	287
7.6	The Oseen Equations	288
7.7	Three-Dimensional Oseen Flows	295
	Problems	298
	Bibliography	302

Chapter Eight UNSTEADY FLOWS, STABILITY, AND TURBULENCE

8.1	Introduction	303
-----	------------------------	-----

PART I UNSTEADY FLOWS

8.2	Simple Examples	304
8.3	Boundary Layer Flows with Outer Fluctuating Velocity (High Frequency)	306

PART II INSTABILITY OF BOUNDARY LAYER FLOWS

8.4	The Energy Equation for Disturbances in Parallel Flows	310
8.5	Stability of Parallel Flows	311
8.6	Stability of the Schlichting Jet	314
8.7	General Method of Solution in Inviscid Case	315
8.8	Stability at Finite Reynolds Numbers	316
8.9	Transition to Turbulent Flows	321

PART III TURBULENT FLOWS

8.10	The Equations of Mean Flow	321
8.11	Turbulent Boundary Layers	324
8.12	The Momentum Balance Equation	325
8.13	The Turbulent Jet	326
8.14	Flows Involving Solid Boundaries	329
8.15	Boundary Layer Flow along a Flat Plate	332
8.16	Summary	334

PART IV STRUCTURE OF TURBULENCE

8.17	The Microstructure of Turbulent Flow	334
8.18	The Velocity Correlation	337
8.19	Spectrum of Turbulence	339
8.20	Nonisotropic Turbulence	340
	Problems	341
	Bibliography	343

Chapter Nine COMPRESSIBLE FLUID FLOW

9.1	Thermodynamics and Fluid Flow	345
9.2	Speed of Propagation of Sound Waves	354
9.3	One-Dimensional Compressible Flow	362
9.4	Basic Equations of Flow	363
9.5	Normal Shock Relations for a Perfect Gas	372
9.6	The Propagating Wave	374
9.7	Flow through a Constant-Area Tube with Heat Transfer	382
9.8	The Equation of the Rayleigh Line	386
9.9	The Fanno Line—Flow with Friction	388
9.10	Shock Waves	391
9.11	The Use of Shock Tubes for the Study of Kinetics in Chemical Physics	397
	Problems	398
	Bibliography	402

Chapter Ten PARTICLE FLUID DYNAMICS

10.1	The Particle Continuum	404
10.2	Forces on a Rigid Spherical Particle in a Fluid	405

10.3	Viscosity of a Dilute Suspension of Small Particles	411
10.4	Macroscopic Continuum Description of Particle-Fluid Flow	417
10.5	Two-Dimensional Suspension Boundary Layer Equations	421
10.6	Laminar Mixing	423
	Bibliography	435

Chapter Eleven HYDRODYNAMICS OF SUPERFLUIDS

11.1	Fountain Effect	438
11.2	Flow of Liquid Helium	439
11.3	Second Sound	440
11.4	Two-Fluid Model of He II	441
11.5	Critical Velocities	442
11.6	Quantized Vortices	445
11.7	Quantized Vortices and Critical Velocities	449
11.8	Jet Flow of Superfluid Helium	450
11.9	Reversible Hydrodynamic Equations	452
11.10	Irreversible Hydrodynamic Equations	454
11.11	Applications to Some Simple Flow Problems	460
11.12	Applications of the Gorter-Mellink Formulation to Flow Problems	467
11.13	Molecular Basis of the Hydrodynamic Theory	470
11.14	Concluding Remarks	471
	Bibliography	475

Appendix VECTOR OPERATIONS AND IDENTITIES

A1	Vector Operations	476
A2	Vector Identities	481
	<i>Subject Index</i>	483
