Preface			xv
Introduction: Asymptotic Solutions			xvii
CHAP.			
I. THE EQUATIONS OF INCOMPRESSIBLE VISCOUS FLUI	о Мо	TION	
1. Viscosity		•	. 1
1. Viscosity . <t< td=""><td></td><td></td><td>. 1</td></t<>			. 1
3. The stress components			. 3
4. Relations between the stress and strain components	•		. 4
 The rate-of-strain components The stress components Relations between the stress and strain components Navier–Stokes equations of motion The rate of dissipation of energy Dynamical similarity Force coefficients General orthogonal coordinates Cylindrical polar coordinates Spherical coordinates Two-dimensional motion Motion symmetrical about an axis 	•		. 5
6. The rate of dissipation of energy	•	•	. 6
7. Dynamical similarity	•	•	. 7
8. Force coefficients	•		. 7
9. General orthogonal coordinates			. 8
10. Cylindrical polar coordinates	•	•	. 10
11. Spherical coordinates	•	•	. 11
12. Two-dimensional motion		•	. 12
13. Motion symmetrical about an axis	•	•	. 12
II. THE BOUNDARY LAYER: DESCRIPTION			
			14
 Description of the motion	•	•	. 14
		•	. 15
3. Turbulence	•	•	. 15
III. EXACT SOLUTIONS OF NAVIER-STOKES EQUATIONS			
III. EXACT SOLUTIONS OF NAVIER-STOKES EQUATIONS 1. Motion between parallel planes 2. Couette's motion			. 18
2 Coulette's motion	•	•	. 10
 Motion between parallel planes Couette's motion Hagen-Poiseuille flow Motion between two concentric rotating cylinders Two-dimensional radial flow between non-parallel plan 	•	•	. 10
4 Motion between two concentric rotating cylinders	•	•	. 19
5. Two-dimensional radial flow between non-parallel play	• • • • • • • • • • • • • • • • • • • •	•	. 20
	ie want	•••	. 20
(a) Divergent flow . . .	•	•	. 22
(b) Convergent now	•	·	. 22
6. Flow due to an infinite rotating plane .	•	•	. 24
7. The round jet	•	•	. 26
IV. THE BOUNDARY-LAYER EQUATIONS			
1. Motion past a plane wall		•	. 29
(a) Schmidt and Schröder's derivation of the equations			
(b) Alternative approach. Asymptotic solutions of	Navier	Stok	es
	1 10 1101	. Stor	. 32
equations	•	•	
2. Notion along a curved wall	·	•	. 33
A Boundary laws for the state of the state o	·	•	. 34
 Motion along a curved wall Motion symmetrical about an axis Boundary-layer functions von Mises's transformation von Kármán's momentum equation 	•	•	. 34 . 35 . 36
5. von Mises's transformation	•	•	. 30
6. von Karmán's momentum equation	•	•	. 37

CHAP.		PAGE
XIV.	THREE-DIMENSIONAL MOTION	
	1. Introduction	125
	1. Introduction . 2. Revolving flow near a plane at rest . 3. Axially symmetric flow past a sphere .	125 127
		129
	5 1	130
	5	130
	5. Yawed infinite cylinder. Transformation of the boundary-layer	
	equations	131
	(a) Transformation of the equations	131 132
		134
	(a) Rotating sphere	134
		135
XV.	Unsteady Flows	
	1. Method of solution .	138
	 Plate moves impulsively from rest. Motion started impulsively from rest. Growth of the boundary layer 	139
	4. Periodic motion of a plate	142
		142
	6. Oscillating motion in a tube	144
XVa.	Suction and Injection	
	1. Equations of motion. A simple solution	147
	· · · · · · · · · · · · · · · · · · ·	148
	(a) Properties of the solution.	. 149
XVI.	HEAT TRANSFER	
		. 151
	2. The equations of continuity and motion.	. 151 . 152
		. 152
	5. The boundary-layer equations	. 156
	Forced Convection	
		. 158
		. 161
		. 163
		. 164 . 165
	(a) Front stagnation point; $m = 1, \lambda = -1$.	. 166
	(b) $m = -0.0476, \lambda = 0.1$. 167
	10. Convection at separation. $u_1 = cx^m$, $T_w = const.$. 168
	11. General conclusions	. 168 . 169
	1 = 0

	13. Transformation of the characteristic equation of energy.		. 170
	14. Circular cylinder at $T_w = \text{const.}$	•	. 171
	15. Convection from a surface of variable temperature .	•	. 173
	16. Asymptotic solution for variable surface temperature .	•	. 175
	Free Convection		
	17. Heated vertical plate		. 177
	•		
ζVII.	The Method of Stationary Points		
	A. Asymptotic Expansions		
	1. Examples of asymptotic expansions		. 180
	2. Definition of asymptotic expansion		. 182
	3. Uniqueness of an asymptotic expansion		. 182
	4. Properties of asymptotic series		. 183
	B. Stationary Points Method		
	5. Cauchy's theorem and its application		. 184
	6. The idea of the method. An example		. 185
	1		
VIII.	Solution of Differential Equations by Contour Inter	GRAL	8
	1. Laplace's transformation	•	. 188
	2. Asymptotic solutions	•	. 190
	(a) Region II-I		. 191
	(b) Region I–III \ldots	•	. 192
		•	. 193
	(c) Region III-II	•	
	3. Expansion in power series	•	. 193
XIX.	Asymptotic Solutions of Differential Equations	CON	_
	inimitorite seletions of Durindenting Agentions	0011
