CONTENTS

PREFACE *page* xi

1 THE LINEARIZED EQUATIONS

1.1 Introduction 1
1.2 Planar problems 4
1.3 Slender wings 13
1.4 Piston theory 16
1.5 Accelerated flight 16

2 THE TRANSFORMATION OF THE SUBSONIC WING EQUATIONS

2.1 Introduction 18
2.2 Dimensionless notation 18
2.3 The Gallilean transformation 20
2.4 The Lorentz transformation 21
2.5 Incompressible flow 23
2.6 Fourier transformation 23
2.7 Harmonic motion 24

3 THE TRANSFORMATION OF THE SUPERSONIC WING EQUATIONS

3.1 Introduction 26
3.2 Dimensionless notation 26
3.3 The Gallilean transformation 27
3.4 The modified Lorentz transformation 29
3.5 The true Lorentz transformation 32
3.6 Other invariant transformations 33
3.7 Mach co-ordinates 34
3.8 General hyperbolic transformation of co-ordinates 35
3.9 Fourier transformation 36
3.10 Harmonic motion 37
3.11 Laplace transformation 37

4 REDUCTION TO STEADY FLOW

4.1 Introduction *page* 39
4.2 Magnaradze's reduction 39
4.3 Gardner's reduction 40
4.4 Frequency expansions 42
4.5 The very low frequency problem 46

5 TWO-DIMENSIONAL PROBLEMS

5.1 Introduction 49
5.2 Oscillating airfoil 49
5.3 Damping in pitch 51
5.4 Arbitrary time dependence 53
5.5 Gust loading 57
5.6 Oscillating airfoil in wind tunnel 58
5.7 Travelling wave 60
5.8 Accelerated airfoil 60

6 SIMPLE PLANFORMS

6.1 Introduction 61
6.2 Oscillating wing 61
6.3 Arbitrary time dependence 63
6.4 Wings with straight, transverse, trailing edges 65
6.5 Swept leading edge 67
6.6 Accelerated wings 68

7 THE RECTANGULAR WING

7.1 Introduction 69
7.2 Downwash independent of spanwise co-ordinate 70
7.3 Steady flow problem 71
7.4 Fourier transform of unsteady flow problem 74
7.5 Finite wing 77
7.6 Damping in pitch 82
7.7 Arbitrary time dependence 84
7.8 Gust loading 86

8 THE QUADRILATERAL WING

8.1 Introduction *page* 88
8.2 Subsonic leading edge 90
8.3 Subsonic trailing edge 91

9 SLENDER WING METHODS

9.1 Introduction 95
9.2 Solution of Laplace's equation 99
9.3 Solution of Helmholtz equation in elliptic co-ordinates 102
9.4 Integral equation solution of Helmholtz equation 106
9.5 Kirchhoff solution of Helmholtz equation 112
9.6 Variational solution of Helmholtz equation 113
9.7 Transient motion 115
9.8 Quasi-slender-wing and low-frequency-transonic theory 122

10 THE DELTA WING

10.1 Introduction 128
10.2 Simple planform 130
10.3 Hyperboloido-conal co-ordinate solution 132
10.4 Slender delta 132
10.5 Expansion in powers of the frequency 136
10.6 Damping in pitch 141
10.7 Gust loading 146

11 THE LOW ASPECT RATIO RECTANGULAR WING

11.1 Introduction 150
11.2 Solution in elliptic co-ordinates 151
11.3 Stability derivatives 152
11.4 Gust loading 156

12 SLENDER NON-PLANAR BODIES

12.1 Introduction 158
12.2 Slender body approximation 162
12.3 Transverse force and rolling moment 164

12.4 Virtual momentum *page* 167
12.5 Winged body of revolution 168
12.6 Transient motion of a body of revolution 172
12.7 Accelerated flight 177

13 NON-LINEAR PROBLEMS

13.1 Introduction 178
13.2 Second-order wing theory 179
13.3 Two-dimensional slowly oscillating airfoil 181
13.4 Lighthill's hypersonic approximation 184

APPENDIX. Reverse Flow Theorems 187
