Chapter	I. The role of Airy's stress function	1
1.01.	The stress tensor	1
1.02.	The deformation tensor	2
1.1.	The equation of motion	3
1.2.	Plane systems	5 [`]
1.22.	Fundamental stress combinations	5
1.24.	Rotation of the axes of reference	7
	Force and moment	8
1.3.	Plane deformation	11
1.4.		12
1.5.	Matrix expression of Hooke's law	14
1.6.	Compatibility	16
1.61.	Notation for indefinite integration	17
1.62.	The equation satisfied by Airy's stress function	17
1.63.	The characteristic equation has no real roots	19
1.7.	The isotropic case	20
1.72.	Case where the body-vector derives from a potential	21
1.74.	Determination of Airy's stress function in the isotropic case	22
1.75.	Effective stress function	23
1.76.	The displacement in the isotropic case	23 ·
Exan	aples I	24
Chapter	II. Complex stresses and their properties in the isotropic case	26
	II. Complex stresses and their properties in the isotropic case The complex stresses in the isotropic case	26
2.10.	The complex stresses in the isotropic case	27
2.10. 2.11.	The complex stresses in the isotropic case	27 27
$2.10. \\ 2.11. \\ 2.12.$	The complex stresses in the isotropic case	27 27 28

Chapter	III. Mathematical preliminaries to the boundary value problems	52
3.10.	Convention regarding sense of description of a contour	52
3.11.	The complex Stokes's theorem	53
3.12.	Cauchy's integral formula	54
3.13.	Cauchy's integral formula for the infinite region exterior to a closed	- · · ,
	contour	56
3.14.	To find the function whose real part is given on a circumference	57
3.16.	Principal value of an integral	59
3.20.	Cauchy integrals	59
3 22	Sectionally holomorphic functions	63
3 30	The formulae of PLEMELJ	63
3 31	A boundary value problem	65
3.40	The Plemelj function $\chi(z)$	
2 /1	Integrals involving the Dispeli function $\chi(t)$	66 67
2 49	Integrals involving the Plemelj function $\chi(t)$	
0.44	Solution of a homogeneous Hilbert functional equation	68
	Solution of an inhomogeneous equation	69
3.44.	A mixed equation	70
	Statement of four fundamental boundary value problems	71
Exan	nples III	72
	IV. Planes and half-planes	75
4.10.	The plane	75
4.11.	Standard concentrated force	76
4.12.	Plate with straight collinear cracks	77
4.13.	Problem I for the plate with collinear cracks	79
4.14.	Plate weakened by linear cracks	80
4.15.	Problem II for the plate with collinear cracks	81
4.16.	A mixed problem for a plate with a slit $\ldots \ldots \ldots \ldots \ldots$	82
4.20.	Semi-infinite regions.	83
4.21.	The half-plane	85
4.22.	Standard concentrated force acting on the boundary of a half-plane	85
4.23.	Analytic continuation of the complex stress $W(z)$	86
4.30.	Boundary conditions for the half-plane	88
4.32	Solution of Problem I for the half-plane	88
4 34	Solution of Problem II for the half-plane.	89
4.35	An application of Problem II	89
4 40	Solution of Problem III for the half-plane	85 90
4 4 1	Determination of pressure and shear on the boundary	
4 49	Rigid beam with a horizontal base which adheres	94
4 13	Adhering rigid beam tilted by a couple	93
4 50	The geometrical conditions at an interface	
4.50.	Conditions activities lies W() for lies the state of the	96
4.54.	Conditions satisfied by $W(z)$ for limiting friction at the interface	97
4.54.	The equation satisfied by $W(z)$ at an interface $\ldots \ldots \ldots$	98
4.60.	Smooth rigid beam with straight horizontal base	99
4.61.	Smooth rigid beam with straight inclined base	100
4.63.	Smooth rigid beam with a curved base	101
4.65.	Smooth rigid beam with a circular base	103
4.70.	Rough rigid beam with a straight horizontal base	104
4.71.	Rough rigid beam with straight inclined base	105
4.73.	Rough rigid beam with a curved base	106
4.75.	Rough rigid beam with a circular base	106
