CHAPTER I

BERNOULLI'S EQUATION

1-0. Introductory notions - - - - -	1
1-01. Physical dimensions - - - - -	2
1-1. Velocity - - - - -	4
1-11. Streamlines and paths of the particles - - - - -	5
1-12. Stream tubes and filaments - - - - -	6
1-2. Density - - - - -	7
1-3. Pressure - - - - -	7
1-4. Bernoulli's theorem (special form) - - - - -	8
1-41. Flow in a channel - - - - -	9
1-42. Remarks on Bernoulli's theorem - - - - -	10
1-43. The constant in Bernoulli's theorem - - - - -	11
1-44. Hydrodynamic pressure - - - - -	11
1-5. The Pitot tube - - - - -	12
1-6. The work done by a gas in expanding - - - - -	13
1-61. Bernoulli's theorem for a compressible fluid - - - - -	14
1-62. Application of Bernoulli's theorem to adiabatic expansion - - - - -	15
1-63. Subsonic and supersonic flow - - - - -	16
1-64. Flow of gas in a converging pipe - - - - -	17
1-7. The Venturi tube - - - - -	18
1-71. Flow of a gas measured by the Venturi tube - - - - -	19
1-8. Flow through an aperture - - - - -	19
1-81. Torricelli's theorem - - - - -	20
1-82. The coefficient of contraction - - - - -	20
1-9. Euler's momentum theorem - - - - -	22
1-91. The force on the walls of a fine tube - - - - -	22
1-92. d'Alembert's paradox - - - - -	23
1-93. The flow past an obstacle - - - - -	24
EXAMPLES I - - - - -	26

CHAPTER II

VECTORS

2-1. Scalars and vectors - - - - -	28
2-11. The scalar product of two vectors - - - - -	29

	PAGE
2-12. The vector product of two vectors	29
2-121. The distributive law	30
2-13. Triple scalar product	30
2-14. Triple vector product	31
2-15. Resolution of a vector	32
2-16. The indefinite or dyadic product	33
2-19. Scalar and vector fields	34
2-20. Line, surface, and volume integrals	35
2-22. Variation of a scalar function of position	37
2-23. Alternative expression for $\text{grad } \phi$	39
2-24. Generalised definition of the operator ∇	40
2-31. The operator ($\mathbf{a} \nabla$)	41
2-32. Operations on a single vector or scalar	41
2-33. Operations on a product	42
2-34. Applications of ∇ to products	43
2-40. Analysis of the motion of a fluid element	45
2-41. Vorticity	46
2-42. Circulation	46
2-50. Stokes' theorem	47
2-51. Deductions from Stokes' theorem	49
2-52. Irrotational motion	50
2-53. Conservative field of force	51
2-60. Gauss's theorem	51
2-61. Deductions from Gauss's theorem	53
2-615. A solenoidal vector forms tubes of constant intensity	53
2-62. Green's theorem	54
2-63. An application of Green's theorem	55
2-70. Cartesian coordinates	56
2-71. The alternative notation $\partial/\partial\mathbf{r}$	58
2-72. Orthogonal curvilinear coordinates	60
2-73. Rate of change of the unit vectors	63
EXAMPLES II	63

CHAPTER III

EQUATIONS OF MOTION

3-10. Differentiation with respect to the time	68
3-20. The equation of continuity	70
3-30. Boundary conditions (Kinematical)	72
3-31. Boundary conditions (Physical)	72
3-32. Efflux	73
3-40. Rate of change of linear momentum	75
3-41. The equation of motion of an inviscid fluid	76
3-42. Euler's momentum theorem	77
3-43. Conservative forces	77
3-44. Lagrangian form of the equation of motion	79
3-45. Steady motion	80
3-50. The energy equation	80

CONTENTS

xi

	PAGE
3-51. Rate of change of circulation - - - - -	81
3-52. Vortex motion - - - - -	82
3-53. Permanence of vorticity - - - - -	83
3-54. Permanence of vortex lines - - - - -	84
3-55. Relative motion - - - - -	85
3-60. Irrotational motion. Pressure equation - - - - -	86
3-61. The pressure equation referred to moving axes - - - - -	87
3-62. The thrust on an obstacle - - - - -	88
3-64. Impulsive motion - - - - -	89
3-70. Connectivity - - - - -	90
3-71. Acyclic and cyclic irrotational motion - - - - -	91
3-72. Kinetic energy of liquid - - - - -	92
3-73. Kelvin's minimum energy theorem - - - - -	93
3-74. Mean value of the velocity potential - - - - -	94
3-75. Mean value of the velocity potential in a periphractic region - - - - -	95
3-76. Kinetic energy of infinite liquid - - - - -	96
3-77. Uniqueness theorems - - - - -	97
EXAMPLES III - - - - -	99

CHAPTER IV

TWO-DIMENSIONAL MOTION

4-1. Motion in two dimensions - - - - -	103
4-20. Two-dimensional steady motion of a liquid - - - - -	104
4-21. Motion without vorticity - - - - -	107
4-22. Motion without strain - - - - -	108
4-23. The vorticity - - - - -	108
4-25. Intrinsic equations of steady motion - - - - -	108
4-30. Stream function - - - - -	109
4-31. Velocity derived from the stream function - - - - -	110
4-32. Rankine's method - - - - -	111
4-33. The stream function of a uniform stream - - - - -	112
4-40. Vector expressions for velocity and vorticity - - - - -	112
4-41. Equation satisfied by ψ - - - - -	114
4-5. The pressure equation - - - - -	114
4-6. Stagnation points - - - - -	115
4-70. The velocity potential of a liquid - - - - -	116
4-71. The equation satisfied by the velocity potential - - - - -	117
EXAMPLES IV - - - - -	118

CHAPTER V

COMPLEX VARIABLE

5-01. Complex numbers - - - - -	120
5-10. Argand diagram - - - - -	120
5-11. Multiplication - - - - -	121

	PAGE
5-12. Equality of complex numbers	122
5-13. Euler's theorem	123
5-14. Conjugate complex numbers	124
5-15. The reciprocal of a complex number	124
5-16. Vector properties of complex numbers	125
5-17. Rotation of axes of reference	126
5-20. Logarithms	126
5-21. Real and imaginary parts	126
5-30. Definition of a holomorphic function of z	127
5-31. Conjugate functions	129
5-32. On the relation of conjugate functions to $f(z)$	130
5-33. The solution of Laplace's equation	131
5-40. Sense of description of a contour	132
5-43. Complex Stokes' theorem	132
5-50. Cauchy's integral theorem	133
5-51. Morera's theorem	133
5-52. Analytical continuation	134
5-53. The principle of reflection	134
5-54. Contraction or enlargement of a contour	135
5-55. Case where the function ceases to be holomorphic	135
5-56. Singularities	136
5-57. Residues	136
5-58. Cauchy's residue theorem	137
5-59. Cauchy's formula	137
5-591. Principal value of an integral	138
5-592. The formulae of Plemelj	139
5-60. Zeros	140
5-61. The principle of the argument	140
5-62. Mapping	141
5-63. Indented contours	143
5-70. Conformal representation	144
5-71. The mapping of infinite regions	145
EXAMPLES V	147

CHAPTER VI

STREAMING MOTIONS

6-0. Complex potential	149
6-01. The complex velocity	150
6-02. Stagnation points	151
6-03. The speed	151
6-04. The equations of the streamlines	152
6-10. Flow through an aperture	152
6-11. Circulation about an elliptic cylinder	153
6-21. The circle theorem	154
6-22. Streaming motion past a circular cylinder	154
6-23. The dividing streamline	156

CONTENTS

xiii

	PAGE
6-24. The pressure distribution on the cylinder - - - - -	156
6-25. Cavitation - - - - -	158
6-29. Application of conformal representation - - - - -	158
6-30. The Joukowski transformation - - - - -	159
6-31. The flow past an elliptic cylinder - - - - -	161
6-32. Elliptic coordinates - - - - -	162
6-33. Application of elliptic coordinates to the streaming past an ellipse - - - - -	164
6-34. Flow past a plate - - - - -	166
6-35. A general method - - - - -	167
6-41. Theorem of Blasius - - - - -	168
6-42. The action of a uniform stream on an elliptic cylinder - - - - -	170
6-50. Coaxial coordinates - - - - -	171
6-51. Flow over a ditch or mound - - - - -	172
6-52. Flow past a cylindrical log - - - - -	174
6-53. Cylinder in a tunnel - - - - -	175
EXAMPLES VI - - - - -	176

CHAPTER VII

AEROFOILS

7-10. Circulation about a circular cylinder - - - - -	180
7-11. Circulation between concentric cylinders - - - - -	181
7-12. Streaming and circulation for a circular cylinder - - - - -	181
7-13. Uniform shear flow - - - - -	184
7-20. The aerofoil - - - - -	185
7-30. Further investigation of the Joukowski transformation - - - - -	186
7-31. Geometrical construction for the transformation - - - - -	187
7-32. The nature of the trailing edge - - - - -	189
7-40. Joukowski's hypothesis - - - - -	190
7-45. The theorem of Kutta and Joukowski - - - - -	191
7-50. The lift on an aerofoil in a uniform stream - - - - -	193
7-51. Axes of a profile - - - - -	195
7-52. Focus of a profile - - - - -	195
7-53. The metacentric parabola - - - - -	196
EXAMPLES VII - - - - -	197

CHAPTER VIII

SOURCES AND SINKS

8-10. Two-dimensional source - - - - -	200
8-12. The complex potential for a simple source - - - - -	201
8-20. Combination of sources and streams - - - - -	201
8-21. Source in a uniform stream - - - - -	202
8-22. Source and sink of equal strengths - - - - -	204
8-23. Doublet, or double source - - - - -	204
8-24. Green's equivalent stratum of doublets - - - - -	205
8-30. Source and equal sink in a stream - - - - -	206

	PAGE
8-31. Two equal sources - - - - -	208
8-40. The method of images - - - - -	210
8-41. Effect on a wall of a source parallel to the wall - - - - -	210
8-42. General method for images in a plane - - - - -	211
8-43. Image of a doublet in a plane - - - - -	212
8-50. Sources in conformal transformation - - - - -	212
8-51. Source in an angle between two walls - - - - -	213
8-60. Source outside a circular cylinder - - - - -	213
8-61. The image system for a source outside a circular cylinder - - - - -	213
8-62. The force exerted on a circular cylinder by a source - - - - -	215
8-63. Lagally's theorem - - - - -	215
8-64. Source outside an elliptic cylinder - - - - -	218
8-70. Mapping on a unit circle - - - - -	218
8-71. Source outside a cylinder - - - - -	220
8-72. Force on the cylinder - - - - -	220
8-80. Source and sink outside a circular cylinder - - - - -	221
8-81. The image of a doublet in a circular cylinder - - - - -	221
8-82. The force on a cylinder due to a doublet - - - - -	222
8-83. Extension of Lagally's theorem to doublets - - - - -	223
8-9. Source in compressible flow - - - - -	224
EXAMPLES VIII - - - - -	225

CHAPTER IX

MOVING CYLINDERS

9-10. Kinetic energy of acyclic irrotational motion - - - - -	231
9-11. Kinetic energy of cyclic motion - - - - -	231
9-20. Circular cylinder moving forward - - - - -	233
9-21. Paths of the particles - - - - -	234
9-22. Kinetic energy - - - - -	237
9-221. Virtual mass - - - - -	237
9-222. Virtual mass in two-dimensional motion - - - - -	238
9-23. Circular cylinder falling under gravity - - - - -	241
9-24. Circular cylinder with circulation - - - - -	241
9-25. Cylinder moving under gravity - - - - -	242
9-30. Pressure equation referred to moving axes - - - - -	243
9-40. The stream function on the boundary - - - - -	243
9-50. Force on a moving cylinder - - - - -	244
9-52. Extension of the theorem of Blasius - - - - -	246
9-53. Cylinder moving in unbounded fluid - - - - -	247
9-62. Cylinder moving in a general manner - - - - -	248
9-63. The complex potential for a moving cylinder - - - - -	249
9-64. Circular cylinder (general method) - - - - -	250
9-65. Elliptic cylinder - - - - -	251
9-66. Cylinder with circulation - - - - -	253
9-70. Rotating cylinder - - - - -	254
9-71. Rotating elliptic cylinder containing liquid - - - - -	254
9-72. Rotating equilateral prism containing liquid - - - - -	255

CONTENTS

XV

	PAGE
9-73. Slotted circular cylinder - - - - -	256
9-74. Mapping method for the complex potential - - - - -	256
9-75. Curvilinear polygonal boundary - - - - -	257
9-76. Rotation about an eccentric point - - - - -	258
EXAMPLES IX - - - - -	258

CHAPTER X

THEOREM OF SCHWARZ AND CHRISTOFFEL

10-1. Simple closed polygons - - - - -	264
10-2. Theorem of Schwarz and Christoffel - - - - -	266
10-31. Mapping a semi-infinite strip - - - - -	270
10-32. Mapping an infinite strip - - - - -	271
10-4. Flow into a channel through a narrow slit in a wall - - - - -	272
10-5. Source midway between two parallel planes - - - - -	273
10-6. A step in the bed of a deep stream - - - - -	273
10-7. Abrupt change in the breadth of a channel - - - - -	275
10-8. Branch in a canal - - - - -	277
EXAMPLES X - - - - -	281

CHAPTER XI

JETS AND CURRENTS

11-10. Free streamlines - - - - -	283
11-11. Jets and currents - - - - -	284
11-2. Formula of Schwarz - - - - -	286
11-30. Impinging jets - - - - -	287
11-31. The complex velocity - - - - -	287
11-32. Expression of the complex potential in terms of v - - - - -	288
11-33. Relations between the breadths and directions of the currents - - - - -	289
11-34. Expression for z in terms of v - - - - -	289
11-35. The equations of the free streamlines - - - - -	290
11-40. The indeterminateness of the problem - - - - -	290
11-41. Direct impact of two equal jets - - - - -	291
11-42. Direct impact of two jets - - - - -	293
11-43. Oblique impact of equal jets - - - - -	294
11-50. Rigid boundaries - - - - -	294
11-51. Borda's mouthpiece in two dimensions - - - - -	295
11-52. The equation of the free streamlines - - - - -	297
11-53. Flow through an aperture - - - - -	299
11-54. Curved boundaries - - - - -	300
11-60. Flow under gravity with a free surface - - - - -	301
11-61. Potential flow with a free surface - - - - -	302
11-62. Steady flow with a free surface - - - - -	303
11-63. Tangent flows - - - - -	307
11-64. Tangent solution to the vertically downwards jet - - - - -	308
EXAMPLES XI - - - - -	310

CHAPTER XII

HELMHOLTZ MOTIONS

	PAGE
12-1. Cavitation - - - - -	314
12-12. Proper cavitation - - - - -	315
12-20. Direct impact of a stream on a lamina - - - - -	316
12-21. The drag - - - - -	318
12-22. Drag coefficient - - - - -	319
12-23. Riabouchinsky's problem - - - - -	319
12-25. Gliding and planing - - - - -	322
12-26. Gliding of a plate on the surface of a stream - - - - -	323
12-30. Reflection across free streamlines - - - - -	326
12-31. Borda's mouthpiece - - - - -	329
12-32. Flow from an orifice - - - - -	330
12-33. Stream impinging on a lamina - - - - -	332
12-34. Geometrical interpretation of the force - - - - -	333
12-35. Backward jet - - - - -	334
12-40. Levi-Civita's method - - - - -	336
12-41. Mapping the z -plane - - - - -	336
12-42. The streamlines - - - - -	338
12-43. The function $\omega(\zeta)$ - - - - -	339
12-44. The wetted walls - - - - -	339
12-45. The free streamlines - - - - -	340
12-46. Drag, lift, and moment - - - - -	341
12-47. Discontinuity of $\omega(\zeta)$ - - - - -	342
12-50. Solution when $\Omega(\zeta)=0$ - - - - -	344
12-51. Stream impinging on a plate - - - - -	345
12-52. The symmetrical case - - - - -	345
EXAMPLES XII - - - - -	347

CHAPTER XIII

RECTILINEAR VORTICES

13-10. Circular vortex - - - - -	349
13-11. Pressure due to a circular vortex - - - - -	351
13-12. Hollow circular vortex - - - - -	352
13-13. Rankine's combined vortex - - - - -	353
13-20. Rectilinear vortex filament - - - - -	354
13-21. Single vortex filament - - - - -	355
13-22. Motion of vortex filaments - - - - -	355
13-23. Two vortex filaments - - - - -	356
13-24. Motion of a system of vortex filaments - - - - -	356
13-30. Vortex pair - - - - -	357
13-31. Vortex filament parallel to a plane - - - - -	358
13-32. Vortex doublet - - - - -	359
13-33. Source and vortex - - - - -	360

CONTENTS

xvii

	PAGE
13-40. Vortex filament parallel to two perpendicular planes - - - - -	361
13-50. Vortex in or outside a circular cylinder - - - - -	362
13-51. Vortices in the presence of a circular cylinder - - - - -	366
13-52. Stationary vortex filaments in the presence of a cylinder - - - - -	367
13-60. Conformal transformation - - - - -	369
13-61. Vortex outside a cylinder - - - - -	371
13-64. Green's equivalent stratum of sources and vortices - - - - -	371
13-70. Vortex sheet - - - - -	372
13-71. Single infinite row - - - - -	373
13-72. Kármán vortex street - - - - -	375
13-73. The drag due to a vortex wake - - - - -	378
13-8. Vortex in compressible flow - - - - -	382
EXAMPLES XIII - - - - -	383

CHAPTER XIV

WAVES

14-10. Wave motion - - - - -	388
14-11. Kinematical condition at the free surface - - - - -	389
14-12. Pressure condition at the free surface - - - - -	390
14-13. Surface waves - - - - -	391
14-14. Speed of propagation - - - - -	392
14-15. The paths of the particles - - - - -	393
14-17. Progressive waves on deep water - - - - -	394
14-18. Pressure due to a deep water wave - - - - -	395
14-20. Kinetic energy of progressive waves - - - - -	395
14-21. Potential energy - - - - -	396
14-22. Group velocity - - - - -	396
14-23. Dynamical significance of group velocity - - - - -	398
14-24. Wave resistance - - - - -	399
14-30. Stationary waves - - - - -	399
14-31. Complex potential of stationary waves - - - - -	400
14-32. Paths of the particles in a stationary wave - - - - -	400
14-33. Stationary waves in a rectangular tank - - - - -	401
14-34. Energy of stationary waves - - - - -	402
14-40. Steady motion - - - - -	402
14-41. Second approximation to the wave speed - - - - -	403
14-42. Waves at an interface - - - - -	404
14-43. Steady flow over a sinuous bottom - - - - -	406
14-44. Waves at an interface when the upper surface is free - - - - -	407
14-50. Surface tension - - - - -	408
14-51. Equation satisfied by the complex potential - - - - -	409
14-52. Surface waves - - - - -	409
14-53. Effect of capillarity on waves at an interface - - - - -	409
14-54. Speed of propagation - - - - -	409
14-55. Effect of wind on deep water - - - - -	411
14-58. Levi-Civita's surface condition - - - - -	411

	PAGE
14-60. Long waves - - - - -	414
14-61. The pressure - - - - -	416
14-62. The surface elevation - - - - -	416
14-63. Wave progressing in one direction only - - - - -	416
14-64. Change of profile in long waves - - - - -	417
14-70. Effect of small disturbing forces - - - - -	418
14-71. Tides in an equatorial canal - - - - -	419
14-80. Gerstner's trochoidal wave - - - - -	420
14-81. Form of the free surface - - - - -	422
14-82. An exact irrotational wave - - - - -	425
14-84. An exact non-linear theory of waves of constant form - - - - -	428
14-85. Exact linearised theory - - - - -	434
14-86. Sound waves - - - - -	435
14-87. Plane waves - - - - -	436
14-88. Plane waves in a cylindrical pipe - - - - -	438
14-89. Spherical waves - - - - -	439
EXAMPLES XIV - - - - -	439

CHAPTER XV

STOKES' STREAM FUNCTION

15-0. Axisymmetrical motions - - - - -	452
15-1. Stokes' stream function - - - - -	452
15-20. Simple source - - - - -	454
15-21. Submarine explosion - - - - -	455
15-22. Uniform stream - - - - -	456
15-23. Source in a uniform stream - - - - -	456
15-24. Finite line source - - - - -	457
15-25. Airship forms - - - - -	458
15-26. Source and equal sink. Doublet - - - - -	459
15-27. Rankine's solids - - - - -	461
15-28. Green's equivalent strata - - - - -	462
15-29. Butler's sphere theorem - - - - -	463
15-30. Sphere in a stream - - - - -	464
15-31. Kinetic energy - - - - -	465
15-32. Moving sphere - - - - -	466
15-33. Pressure on a moving sphere - - - - -	468
15-40. Image of a source in a sphere - - - - -	468
15-41. Image of a radial doublet in a sphere - - - - -	469
15-42. Force on an obstacle - - - - -	470
15-43. Action of a source on a sphere - - - - -	472
15-44. Action of a radial doublet on a sphere - - - - -	472
15-50. The equation satisfied by the stream function when the motion is irrotational - - - - -	472
15-51. The velocity - - - - -	473
15-52. Boundary condition satisfied by the stream function - - - - -	474
15-53. The sphere - - - - -	474

CONTENTS

xix

	PAGE
15-54. Stream function for a planetary ellipsoid - - - - -	475
15-55. For a circular disc - - - - -	477
15-56. Venturi tube - - - - -	477
15-57. Stream function for an ovary ellipsoid - - - - -	477
15-58. Paraboloid of revolution - - - - -	478
15-60. Comparison theorems - - - - -	479
EXAMPLES XV - - - - -	483

CHAPTER XVI

SPHERES AND ELLIPSOIDS

16-1. Spherical harmonics - - - - -	493
16-12. Kelvin's inversion theorem - - - - -	495
16-13. Weiss's sphere theorem - - - - -	496
16-20. Concentric spheres - - - - -	497
16-21. Concentric spheres moving in the same direction - - - - -	499
16-22. If the outer envelope is at rest - - - - -	500
16-30. Two spheres moving in the line of centres - - - - -	501
16-31. Sphere moving perpendicularly to a wall - - - - -	504
16-40. Two spheres moving at right angles to the line of centres - - - - -	504
16-41. Sphere moving parallel to a wall - - - - -	506
16-50. Ellipsoidal coordinates - - - - -	506
16-51. Ellipsoidal harmonics - - - - -	509
16-52. Translatory motion of an ellipsoid - - - - -	510
16-53. Rotating ellipsoid - - - - -	512
16-54. Rotating ellipsoidal shell - - - - -	513
EXAMPLES XVI - - - - -	513

CHAPTER XVII

SOLID MOVING THROUGH A LIQUID

17-10. Motion of a solid through a liquid - - - - -	521
17-20. Kinetic energy of the liquid - - - - -	522
17-21. The kinetic energy of the solid - - - - -	523
17-30. The wrench - - - - -	523
17-31. The impulse - - - - -	524
17-32. Rate of change of the impulse - - - - -	524
17-40. Moving origin - - - - -	526
17-41. Equations of motion - - - - -	527
17-42. Impulse derived from the kinetic energy - - - - -	527
17-43. Equations in terms of kinetic energy - - - - -	528
17-50. Permanent translation - - - - -	529
17-51. Permanent rotation - - - - -	530
17-52. Solid of revolution - - - - -	531
17-53. Stability due to rotation - - - - -	533

	PAGE
17-54. Solid containing a cavity - - - - -	534
17-60. Lagrange's equations - - - - -	534
17-61. Sphere in the presence of a wall - - - - -	538
17-70. Solid of revolution athwart an inviscid stream - - - - -	539
EXAMPLES XVII - - - - -	540

CHAPTER XVIII

VORTEX MOTION

18-10. Poisson's equation - - - - -	545
18-20. Velocity expressed in terms of vorticity - - - - -	546
18-21. Flux through a circuit - - - - -	547
18-22. Unbounded fluid - - - - -	548
18-23. Vortex filament - - - - -	548
18-24. Electrical analogy - - - - -	550
18-30. Kinetic energy - - - - -	550
18-40. Axisymmetrical motions - - - - -	551
18-41. Circular vortex filament - - - - -	552
18-50. Equation satisfied by the stream function - - - - -	553
18-51. Hill's spherical vortex - - - - -	554
18-60. Aerofoil of finite span - - - - -	555
18-61. Aerofoil of minimum induced drag - - - - -	558
EXAMPLES XVIII - - - - -	559

CHAPTER XIX

VISCOSITY

19-01. The stress tensor of a perfect fluid - - - - -	564
19-02. The viscosity hypothesis - - - - -	564
19-03. The equation of motion - - - - -	566
19-04. Steady motion ; no external forces - - - - -	567
19-05. Boundary conditions in a viscous fluid - - - - -	568
19-11. Equation satisfied by the vorticity - - - - -	568
19-12. Decay of vorticity - - - - -	569
19-13. Circulation in a viscous liquid - - - - -	569
19-21. Dissipation of energy - - - - -	569
19-22. The flow of heat in a fluid - - - - -	572
19-31. Flow between parallel plates - - - - -	573
19-32. Flow through a pipe - - - - -	575
19-41. Components of stress - - - - -	577
19-42. Steady rotatory motion - - - - -	579
19-51. Effect of viscosity on water waves - - - - -	580
19-61. Axisymmetrical motion - - - - -	581
19-62. Slow motions - - - - -	582
19-63. Slow streaming past a sphere - - - - -	583
19-64. Drag on a slowly moving sphere - - - - -	584

	PAGE
19-70. Vector circulation - - - - -	585
19-71. The wake - - - - -	586
19-72. The net vorticity in the wake - - - - -	587
19-73. Vorticity transport - - - - -	587
19-74. The force on an aerofoil - - - - -	588
19-75. Oseen's approximation at a distance - - - - -	589
19-76. Lift and drag - - - - -	592
19-80. Similarity - - - - -	594
19-81. Boundary layer - - - - -	595
19-82. Intrinsic equations - - - - -	598
EXAMPLES XIX - - - - -	600

CHAPTER XX

SUBSONIC AND SUPERSONIC FLOW

20-01. Thermodynamical considerations - - - - -	609
20-1. Crocco's equation - - - - -	612
20-12. Addition of a constant velocity - - - - -	612
20-13. Steady motion - - - - -	612
20-2. Steady irrotational motion - - - - -	613
20-3. The hodograph method - - - - -	614
20-31. The hodograph equations for homentropic flow - - - - -	616
20-32. The case $m = -1$ - - - - -	617
20-33. Compressible flow in a convergent-divergent nozzle - - - - -	618
20-4. Moving disturbance - - - - -	622
20-41. Characteristics - - - - -	624
20-42. Characteristics for steady motion - - - - -	624
20-43. Variation of speed along a characteristic - - - - -	626
20-44. Characteristic coordinates - - - - -	627
20-45. Straight-walled nozzle - - - - -	629
20-5. Flow round a corner - - - - -	631
20-6. Shock waves - - - - -	633
20-61. The shock polar - - - - -	637
20-7. Characteristics in isentropic flow - - - - -	640
20-71. Uniqueness theorem - - - - -	644
20-8. Flows dependent on time - - - - -	645
EXAMPLES XX - - - - -	647
INDEX - - - - -	651
