Authors' Preface to the English Edition	iii
Editor's Preface to the English Edition	v
Foreword	vii
Introduction	1
Chapter 1 Laminar and Turbulent Flows	27
1. Equations of Fluid Dynamics and Their Consequences	27
1.1 System of Dynamical Equations for an Incompressible Fluid	27
1.2 Simple Flows of Incompressible Fluid	31
1.3 The Reynolds Number and Similarity Criteria	38
1.4 Flows with Large Reynolds Numbers; The Boundary Layer	41
1.5 General Equation of the Heat Budget and the Thermal Conduction Equation; Forced and Free Convection	52
1.6 Similarity Criteria for a Thermally Inhomogeneous Fluid; The Thermal Boundary Layer	59
1.7 Small Oscillations of a Compressible Fluid	64
2. Hydrodynamic Instability and Transition to Turbulence	71
2.1 Concept of Turbulence; Empirical Data on Transition to Turbulence in Tubes and Boundary Layers	71
2.2 Turbulent Flow Past Solid Bodies; Boundary-layer Separation, the Drag Crisis and the Mechanism of Boundary-layer Transition	79
2.3 Hydrodynamic Instability	85
2.4 Simple Examples of Absolutely Unstable Fluid Flows	89
2.5 Mathematical Formulation of the Stability Problem for Infinitesimal Disturbances	92
2.6 Stability of Flow between Two Rotating Cylinders ..	96
2.7 Stability of a Layer of Fluid Heated from Below	107
2.8 Stability of Parallel Flows	111
2.9 Stability to Finite Disturbances; Growth of Disturbances and Transition to Turbulence	147

Chapter 2	Mathematical Description of Turbulence.	
	Mean Values and Correlation Functions	205
3.	Methods of Taking Averages. Fields of Fluid Dynamic Variables as Random Fields	205
3.1	Practical Methods of Averaging and Reynolds Conditions	205
3.2	Random Fields of Fluid Dynamic Variables and Probability Averaging	209
3.3	Concept of Ergodicity. Statistical Formulation of the Fundamental Turbulence Problem	214
3.4	Characteristic Functions and the Characteristic Functional	218
4.	Moments of Fluid Dynamic Fields	222
4.1	Moments and Cumulants of Random Variables	222
4.2	Moments and Cumulants of Random Fields	226
4.3	Random Fields with a Normal Probability Distribution (Gaussian Fields)	231
4.4	Determination of the Moments and Cumulants of a Random Field According to Its Characteristic Functional	237
4.5	Stationary Random Functions	243
4.6	Homogeneous Random Fields	246
4.7	The Ergodic Theorem	249
Chapter 3	Reynolds Equations and the Semiempirical Theories of Turbulence	257
5.	Turbulent Shear Flows in Tubes, Boundary Layers, etc.	257
5.1	Reynolds Equations	257
5.2	General Form of the Mean Velocity Profile Close to a Rigid Wall	264
5.3	Flow Close to a Smooth Wall; Viscous Sublayer and Logarithmic Boundary Layer	270
5.4	Flow Along a Rough Wall; Roughness Parameter and Displacement Height	284
5.5	Turbulent Flows in Tubes and Channels; Skin Friction Laws	296
5.6	Turbulent Boundary Layer on a Flat Plate	311
5.7	Profile of Concentration of a Passive Admixture Close to a Wall; Mass- and Heat-Transfer in a Turbulent Boundary Layer	327
5.8	Free Turbulence	347
5.9	Semiempirical Theories of Turbulence	364
6.	The Energy Balance Equation and Its Consequences	373
6.1	Equation for the Reynolds Stress Tensor	373
6.2	Equation of Turbulent Energy Balance	381
6.3	General Concept of the Viscosity and Thermal Diffusivity	388

6.4	Energy Balance in a Compressible Fluid	393
6.5	The Richardson Number and the Eddy Viscosity in a Thermally Stratified Medium	398
6.6	Turbulence in the Planetary Boundary Layer of the Atmosphere	404
6.7	Distribution of Suspended Particles in a Turbulent Flow	412
Chapter 4	Turbulence in a Thermally Stratified Medium	417
7.	Generalization of Logarithmic Layer Theory to Thermally Stratified Flows	417
7.1	Thermally Stratified Turbulent Boundary Layer as a Model of the Atmospheric Surface Layer	417
7.2	Application of Dimensional Reasoning to Turbulence in a Stratified Medium	425
7.3	The Form of the Universal Functions Describing Turbulence in a Stratified Medium	430
7.4	Further Discussion of the Universal Functions; Interpolation Formulas and Semiempirical Formulas . .	443
7.5	General Similarity Hypothesis for a Turbulent Regime in a Stratified Boundary Layer and Its Application to the Characteristics of Turbulent Fluctuations	456
8.	Comparison of the Theoretical Deductions with the Data	468
8.1	Wind-Velocity Profiles in the Surface Layer of the Atmosphere	468
8.2	Data on Temperature and Humidity Profiles	486
8.3	Methods of Measuring Turbulent Fluxes of Momentum, Heat, and Water Vapor	504
8.4	Determination of Turbulent Fluxes from Data on the Profiles of Meteorological Variables	509
8.5	Characteristics of Wind Velocity and Temperature Fluctuations in the Atmospheric Surface Layer	517
Chapter 5	Particle Dispersion in a Turbulent Flow	527
9.	The Lagrangian Description of Turbulence	527
9.1	The Lagrangian Dynamic Equations of an Incompressible Viscous Fluid	527
9.2	Lagrangian Turbulence Characteristics	535
9.3	Displacement Characteristics of a Single Fluid Particle; the Case of Homogeneous Turbulence	540
9.4	Fluid Particle Displacements in Grid Turbulence and in Turbulent Shear Flows	547
9.5	The Lagrangian Velocity Correlation Function and Its Relationship to the Eulerian Statistical Characteristics	569

xii CONTENTS

10. Turbulent Diffusion	579
10.1 Problem of the Description of Turbulent Diffusion ..	579
10.2 Interaction Between Molecular and Turbulent Diffusion	591
10.3 Semiempirical Equation of Turbulent Diffusion	606
10.4 Diffusion in a Field of Homogeneous Turbulence and in Simple Shear Flows	614
10.5 Diffusion in the Atmospheric Surface Layer	640
10.6 Diffusion with a Finite Velocity	676
Bibliography	695
Author Index	747
Subject Index	757
