CONTENTS

PREFACE 9

SUMMARY OF NOTATION 13

CHAPTER 1. STRESS TENSOR 15

1.1. Tensors. Green's Theorem 15
1.2. Stress Vector. 20
1.3. Components of the Stress Tensor 21
1.4. Equations of Equilibrium 23
1.5. Tensor Character of Stress 24
1.6. Principal Stresses and the Quadric of Stress 24

CHAPTER 2. STRAIN TENSOR 29

2.1. Finite Strain Tensor 29
2.2. Small Strain Tensor 34
2.3. Equations of the Compatibility of Strain 36

CHAPTER 3. GENERALIZED HOOKE'S LAW. 41

3.1. Tension Test. 41
3.2. Generalized Hooke's Law 43
3.3. Elasto-Plastic Materials. Deformation Theory. (A Special Case of the Nonlinear Hooke's Law) 50
3.4. Elasto-Inelastic Bodies. A Model with Internal State Variables 51
3.5. Hooke's Law with a Perfectly Plastic Domain 52
3.6. Flow Theory of Plasticity 54

CHAPTER 4. FORMULATION OF BOUNDARY VALUE PROBLEMS OF THE THEORY OF ELASTICITY. 56

4.1. Lamé Equations. Beltrami-Michell Equations 56
4.2. The Classical Formulation of Basic Boundary Value Problems of Elasticity 58

CHAPTER 5. VARIATIONAL PRINCIPLES IN SMALL DISPLACEMENT THEORY 60

5.1. Principles of Virtual Work, Virtual Displacements and Virtual Stresses . . 60
5.2. Principle of Minimum Potential Energy in the Theory of Elasticity . . . 62

5.3. Principle of Minimum Complementary Energy in the Theory of Elasticity 64
5.4. Hybrid Principles in the Theory of Elasticity. The Hellinger-Reissner Principle 66

CHAPTER 6. FUNCTIONS WITH FINITE ENERGY 71

6.1. The Space of Functions with Finite Energy 71
6.2. The Trace Theorem. Equivalent Norms, Rellich's Theorem 72
6.3. Coerciveness of Strains. Korn's Inequality 77

CHAPTER 7. VARIATIONAL FORMULATION AND SOLUTION OF BASIC BOUNDARY VALUE PROBLEMS OF ELASTICITY 86

7.1. Weak (Generalized) Solution 86
7.2. Solution of Basic Boundary Value Problems by the Variational Method . 88
7.2.1. Solution of the Abstract Variational Problem 88
7.2.2. Application to Basic Problems of the Theory of Elasticity 90
7.3. Solution of the First Basic Boundary Value Problem of Elasticity . . . 95
7.4. Contact and Other Boundary Value Problems 100
7.5. Variational Formulation in Terms of Stresses. Method of Orthogonal Projections and Castigliano's Principle 103
7.6. Basic Boundary Value Problems of Elasticity in Orthogonal Curvilinear Coordinates 109
7.6.1. Tensors in Curvilinear Coordinates 109
7.6.2. Physical Components of Strain and Stress Tensors 112
7.6.3. Formulation of Variational Principles in Curvilinear Coordinates . 118
7.6.4. Weak Solution of Basic Boundary Value Problems Formulated in Terms of Displacements or Stresses 121

CHAPTER 8. SOLUTION OF BOUNDARY VALUE PROBLEMS FOR THE ELASTO-PLASTIC BODY. DEFORMATION THEORY 125

8.1. Formulation of the Weak Solution 125
8.2. Application of the Variational Method to the Solution of Basic Boundary Value Problems 128

CHAPTER 9. SOLUTION OF BOUNDARY VALUE PROBLEMS FOR THE ELASTO-INELASTIC BODY 131

9.1. Elasto-Inelastic Material 131
9.2. Solution of the First Boundary Value Problem for the Elasto-Inelastic Body 132
9.3. Solution of the Second Boundary Value Problem 138

CHAPTER 10. TWO- AND ONE-DIMENSIONAL PROBLEMS 141

10.1. Saint-Venant's Principle 141
10.2. Plane Elasticity 149
10.2.1. Basic Cases of Plane Elasticity 149
A. Plane Strain 149
B. Plane Stress 151
C. Generalized Plane Stress 152
10.2.2. Solution of Problems of Plane Elasticity in Terms of Displacements 155
A. Plane Strain 156
B. Plane Stress 157
C. Generalized Plane Stress 157
10.2.3. Solution of Problems of Plane Elasticity in Terms of Stresses. The Airy Stress Function 158
A. Plane Strain 160
B. Plane Stress 162
C. Generalized Plane Stress 164
D. Transformation into the Dirichlet Boundary Value Problem . 165
E. Variational Problem for the Airy Function 168
F. Principle of Minimum Complementary Energy 169
G. Employing the Airy Function in the Principle of Minimum Complementary Energy 171
H. Semi-Inverse Method 176
10.3. Axisymmetric Boundary Value Problems 178
10.4. Reduction of Dimension in the Theory of Elasticity 186
10.4.1. Kantorovič's Method 186
10.4.2. Bending of a Beam 188
10.4.3. Bending of a Plate 200
10.4.4. Shells 210
10.4.5. Solution of a Boundary Value Problem for a Cylindrical Shell . 219
10.5. Torsion of a Bar 225

CHAPTER 11. RITZ-GALERKIN AND OTHER APPROXIMATE METHODS 233

11.1. Minimizing Sequence 233
11.2. The Ritz-Galerkin Method 234
11.3. Finite Element Method 235
11.3.1. Compatible Models 236
11.3.2. Equilibrium Models 248
11.3.3. Mixed Models 256

11.4. A Posteriori Error Bounds. Two-Sided Energy Bounds. The Hypercircle Method 259
11.5. The Kačanov Method 262
11.6. Method of Steepest Descent 265
11.7. Method of Contraction 268

CHAPTER 12. LARGE DEFLECTIONS OF PLATES. THE EQUATIONS OF VON KÁRMÁN 273

12.1. Finite Elasticity 273
12.2. Large Deflections of Plates 277
12.3. Theory of Von Kármán's Equations 281

CHAPTER 13. VARIATIONAL INEQUALITIES WITH APPLICATIONS TO PROBLEMS OF SIGNORINI'S TYPE AND TO THE THEORY OF PLASTICITY 294

13.1. Signorini's Problem 294
13.2. Elasto-Plastic Body with a Perfectly Plastic Domain 302
13.3. Approximate Solution of Variational Inequalities 309
13.4. Flow Theory of Plasticity. Elasto-Inelastic Body with a Perfectly Plastic Domain 322
13.5. Flow Theory. Elasto-Inelastic Body with Strain Hardening 329

BIBLIOGRAPHY 335

SUBJECT INDEX 340
