Preface

Chapter I. Introduction: Classification of Two-Phase Flows	1
1. Introduction	1
2. Liquid-Gas Flows	2
3. Liquid-Solid Flows	7
4. Gas-Solid Flows	9
5. Liquid-Plasma Flows. Electrohydrodynamics	11
6. Plasma-Solid Flows. Electromagneto-Fluid Dynamics	11
7. Gas-Plasma Flows. Multifluid Theory of a Plasma	12
8. Methods of Treatment	12
9. References	13
Chapter II. Properties of Matter	15
1. General Description of Matter	15
2. Thermodynamic Relations	20
3. Gases and Vapors	25
4. Liquids and Wet Vapors	36
5. Plasma and Mixture of Gas and Vapor	41
6. Some Properties of Solids	48
7. Electromagnetic Properties of Matter	50
8. References	54
Chapter III. Superspeed Hydrodynamics. Mixture of Liquid and Its Own Vapor	56
1. Introduction	56
2. Fundamental Equations of Superspeed Hydrodynamics	58
3. Dryness Fraction	62
4. Thermodynamics of a Mixture of Liquid and Its Vapor	64
5. Gasdynamics of Condensing Vapors	67
6. One-Dimensional Flow of Liquid and Its Vapor	75
7. Boundary Layer Flow of Superspeed Hydrodynamics	80
8. Some Advanced Problems of Superspeed Hydrodynamics	83
9. References	85
Chapter IV. Two-Phase Flows of Gas and Liquid	87
1. Introduction	87
2. Empirical Treatment of the Flow of a Mixture of a Gas and a Liquid in Pipes	88
3. Fundamental Equations of a Homogeneous Mixture of Gas and Liquid.	
Froth Flow	90
4. Sound Wave in a Froth Flow	97
5. Shock Wave of a Froth Flow	100
6. One-Dimensional Steady Froth Flow	102
7. Flow with the Effect of Condensation of Vapor	104
8. Flow with Effect of Evaporation of Liquid. Cavitation Flow	106
9. Stratified Flow	108
10. Two-Phase Flow with Non-Uniform Surface Tension	111
11. References	114

Chapter V. Mixture of Fluid and Solid Particles	116
1. Introduction	116
2. Particle Behaviors in the Mixture of a Gas and Solid Particles	119
3. Fundamental Equations of the Mixture of a Gas and Solid Particles from Continuum Theory Point of View	125
4. Fundamental Equations of the Mixture of a Gas and Solid Particles from Simple Kinetic Theory Point of View	131
5. Thermodynamics of a Mixture of a Gas and Small Solid Particles	141
6. One-Dimensional Nozzle Flow of a Mixture of a Gas and Solid Particles	144
7. Shock Relaxation	145
8. Nonsteady Flow of a Mixture of a Gas and Solid Particles	149
9. Prandtl-Meyer Flow	152
10. Laminar Boundary Layer for an Incompressible Fluid-Particle System	154
11. Lunar Ash Flow	157
12. Dusty Gasdynamics	164
13. References	165
Chapter VI. Atomization of a Liquid and Bubble Dynamics	168
1. Introduction	168
2. Rayleigh Problem of Stability of a Circular Jet	169
3. Atomization of Liquids	174
4. Bubble Formation	177
5. Motion of a Single Drop of a Liquid	178
6. Bubble Dynamics	180
7. Stability of a Bubble	182
8. Mass and Heat Transfer of Bubbles or Drops	185
9. Size Distribution of Drops and Bubbles	189
10. Interaction Effects for Drops and Bubbles	193
11. Bubble Motion with Non-Uniform Surface Tension Effect	193
12. References	194
Chapter VII. Sedimentation and Flow Through a Porous Medium	195
1. Introduction	195
Part A. Sedimentation	196
2. Sedimentation	196
3. Solid Bodies in a Moving Liquid	198
4. Solid Bodies in a Moving Gas	201
Part B. Flow in a Porous Medium	201
5. Porous Medium	201
6. Darcy's Law	203
7. Steady Flow of a Homogeneous Fluid Through a Porous Medium	205
8. Steady Flow of Non-Homogeneous Fluids Through a Porous Medium	208
9. Unsteady Flow in a Porous Medium	210
10. Statistical Analysis of Flow in a Porous Medium	213
11. References	216

Chapter VIII. Ablation	217
1. Introduction	217
2. Heat Conduction in a Melting Solid	218
3. Ablation in a Hypersonic Flow	220
4. The Melting of Ice in a Stream of Hot Gas	223
5. Transient Melting	225
6. Some Experimental Results of Ablation Problems	227
7. Meteoric Ablation	229
8. Tektites	230
9. Other Two-Phase Flows of Liquid-Gas Through the Interaction of Its Interface	233
10. References	234
Chapter IX. Aeroelasticity and Hydroelasticity	236
1. Introduction	236
2. Static Phenomena: Divergence and Control Reversal	238
3. Two-Dimensional Torsional Divergence	240
4. Some Aeroelastic Properties of Swept Wings	241
5. Static Hydroelastic Phenomena	246
6. Dynamic Phenomena: Flutter and Buffeting	246
7. A Simple Binary Flutter of a Two-Dimensional Wing	249
8. Influence of Various Parameters in Flutter of Aero- and Hydro-Elasticity	251
9. Buffeting and Stall Flutter	254
10. Other Dynamic Aeroelastic and Hydroelastic Phenomena	255
11. Laminar Flow in an Elastic Tube	258
12. References	260
Chapter X. Multifluid Theory of a Plasma	262
1. Introduction	262
2. Fundamental Equations of a Plasma from Macroscopic Point of View	263
3. Gross Variables of a Mixture of Fluids as a Whole	269
4. Relations between Single Fluid and Multifluid Theories for a Mixture of Fluids	274
5. Equation of Electrical Current Density in a Plasma	276
6. Wave Motions in a Plasma Based on Multifluid Theory	280
7. One-Dimensional Nozzle Flow of a Fully Ionized Plasma	287
8. Heat Transfer of a Partially Ionized Gas Based on Three-Fluid Theory	290
9. Basic Concepts of Multifluid Theory from the Microscopic Point of View	296
10. Generalized Boltzmann Equation	298
11. Relations between Kinetic Theory and Continuum Theory	300
12. Transfer Equations	301
13. Expressions for the Coefficients of Diffusion, Heat Conductivity and Viscosity	303
14. Plasma Oscillations	305
15. Some Dimensional Considerations of Plasma Dynamics	308
16. References	311

Chapter XI. Electromagneto-Fluid Dynamics	313
1. Introduction	313
2. Electrification and Ionization	314
3. Electromagnetic Equations	318
4. Boundary Conditions of Electromagnetic Fields	319
5. Electrical Conductivity	320
6. Mobility and Dynamics of Charged Particles	322
7. Fundamental Equations of Electromagneto-Fluid Dynamics	324
8. Classification of Flow Problems of Electromagneto-Fluid Dynamics	326
9. Magnetogasdynamic Power Generation	330
10. Electrogasdynamic Power Generation	336
11. One-Dimensional Two-Phase Flow of Electrogasdynamics	338
12. Ferrohydrodynamics	340
13. Two-Phase Flows of Electrohydrodynamics	344
14. Collection of Aerosol Particles and other Problems of Two-Phase Flow with Strong Electrostatic Fields	345
15. Units in Electromagnetic Theory	349
16. References	352
Authors Index	354
Subject Index	356
