<i>Preface</i>	ix
<i>Acknowledgments</i>	xiii
<b>1 Introduction</b>	<b>1</b>
1.1 Physical picture	1
1.2 Scope and early works	3
1.3 Applications and geometrical structure	9
1.4 Approach	13
Notes	16
<b>2 Flow, trajectories, and deformation</b>	<b>18</b>
2.1 Flow	18
2.2 Velocity, acceleration, Lagrangian and Eulerian viewpoints	20
2.3 Extension to multicomponent media	22
2.4 Classical means for visualization of flows	22
2.4.1 Particle path, orbit, or trajectory	22
2.4.2 Streamlines	23
2.4.3 Streaklines	23
2.5 Steady and periodic flows	24
2.6 Deformation gradient and velocity gradient	30
2.7 Kinematics of deformation-strain	30
2.8 Motion around a point	33
2.9 Kinematics of deformation: rate of strain	35
2.10 Rates of change of material integrals	36
2.11 Physical meaning of $\nabla\mathbf{v}$ , $(\nabla\mathbf{v})^T$ , and $\mathbf{D}$	38
Bibliography	40
Notes	40
<b>3 Conservation equations, change of frame, and vorticity</b>	<b>42</b>
3.1 Principle of conservation of mass	42
3.2 Principle of conservation of linear momentum	43
3.3 Traction $\mathbf{t}(\mathbf{n}, \mathbf{x}, t)$	43
3.4 Cauchy's equation of motion	46

3.5	Principle of conservation of angular momentum	46
3.6	Mechanical energy equation and the energy equation	47
3.7	Change of frame	49
3.7.1	<i>Objectivity</i>	49
3.7.2	<i>Velocity</i>	50
3.7.3	<i>Acceleration</i>	51
3.8	Vorticity distribution	53
3.9	Vorticity dynamics	55
3.10	Macroscopic balance of vorticity	57
3.11	Vortex line stretching in inviscid fluid	57
3.12	Streamfunction and potential function	59
	Bibliography	62
	Notes	62
<b>4</b>	<b>Computation of stretching and efficiency</b>	<b>64</b>
4.1	Efficiency of mixing	64
4.1.1	<i>Properties of <math>e_\lambda</math> and <math>e_\eta</math></i>	66
4.1.2	<i>Typical behavior of the efficiency</i>	66
4.1.3	<i>Flow classification</i>	67
4.2	Examples of stretching and efficiency	68
4.3	Flows with a special form of $\nabla\mathbf{v}$	77
4.3.1	<i>Flows with <math>D(\nabla\mathbf{v})/Dt = 0</math></i>	77
4.3.2	<i>Flows with <math>D(\nabla\mathbf{v})/Dt</math> small</i>	79
4.4	Flows with a special form of $\mathbf{F}$ ; motions with constant stretch history	82
4.5	Efficiency in linear three-dimensional flow	84
4.6	The importance of reorientation; efficiencies in sequences of flows	87
4.7	Possible ways to improve mixing	91
	Bibliography	94
	Notes	94
<b>5</b>	<b>Chaos in dynamical systems</b>	<b>96</b>
5.1	Introduction	96
5.2	Dynamical systems	97
5.3	Fixed points and periodic points	99
5.4	Local stability and linearized maps	100
5.4.1	<i>Definitions</i>	101
5.4.2	<i>Stability of area preserving two-dimensional maps</i>	101
5.4.3	<i>Families of periodic points</i>	103
5.5	Poincaré sections	103
5.6	Invariant subspaces: stable and unstable manifolds	105
5.7	Structural stability	107
5.8	Signatures of chaos: homoclinic and heteroclinic points, Liapunov exponents and horseshoe maps	111

5.8.1	<i>Homoclinic and heteroclinic connections and points</i>	111
5.8.2	<i>Sensitivity to initial conditions and Liapunov exponents</i>	116
5.8.3	<i>Horseshoe maps</i>	117
5.9	Summary of definitions of chaos	124
5.10	Possibilities in higher dimensions	124
	Bibliography	125
	Notes	128
<b>6</b>	<b>Chaos in Hamiltonian systems</b>	130
6.1	Introduction	130
6.2	Hamilton's equations	131
6.3	Integrability of Hamiltonian systems	132
6.4	General structure of integrable systems	133
6.5	Phase space of Hamiltonian systems	135
6.6	Phase space in periodic Hamiltonian flows: Poincaré sections and tori	136
6.7	Liapunov exponents	138
6.8	Homoclinic and heteroclinic points in Hamiltonian systems	140
6.9	Perturbations of Hamiltonian systems: Melnikov's method	141
6.10	Behavior near elliptic points	143
6.10.1	<i>Poincaré–Birkhoff theorem</i>	144
6.10.2	<i>The Kolmogorov–Arnold–Moser theorem (the KAM theorem)</i>	146
6.10.3	<i>The twist theorem</i>	148
6.11	General qualitative picture of near integrable chaotic Hamiltonian systems	148
	Bibliography	152
	Notes	152
<b>7</b>	<b>Mixing and chaos in two-dimensional time-periodic flows</b>	154
7.1	Introduction	154
7.2	The tendril–whorl flow	155
7.2.1	<i>Local analysis: location and stability of period-1 and period-2 periodic points</i>	158
7.2.2	<i>Global analysis and interactions between manifolds</i>	165
7.2.3	<i>Formation of horseshoe maps in the TW map</i>	169
7.3	The blinking vortex flow (BV)	171
7.3.1	<i>Poincaré sections</i>	172
7.3.2	<i>Stability of period-1 periodic points and conjugate lines</i>	176
7.3.3	<i>Horseshoe maps in the BV flow</i>	177
7.3.4	<i>Liapunov exponents, average efficiency, and 'irreversibility'</i>	180
7.3.5	<i>Macroscopic dispersion of tracer particles</i>	185
7.4	Mixing in a journal bearing flow	193
7.5	Mixing in cavity flows	201
	Bibliography	214
	Notes	216

<b>8</b>	<b>Mixing and chaos in three-dimensional and open flows</b>	220
8.1	Introduction	220
8.2	Mixing in the partitioned-pipe mixer	221
8.2.1	<i>Approximate velocity field</i>	221
8.2.2	<i>Poincaré sections and three-dimensional structure</i>	227
8.2.3	<i>Exit time distributions</i>	237
8.2.4	<i>Local stretching of material lines</i>	239
8.3	Mixing in the eccentric helical annular mixer	244
8.4	Mixing and dispersion in a furrowed channel	249
8.5	Mixing in the Kelvin cat eyes flow	254
8.6	Flows near walls	260
8.7	Streamlines in an inviscid flow	269
	Bibliography	271
	Notes	272
<b>9</b>	<b>Epilogue: diffusion and reaction in lamellar structures and microstructures in chaotic flows</b>	273
9.1	Transport at striation thickness scales	273
9.1.1	<i>Parameters and variables characterizing transport at small scales</i>	279
9.1.2	<i>Regimes</i>	281
9.2	Complications and illustrations	288
9.2.1	<i>Distortions of lamellar structures and distribution effects</i>	288
9.2.2	<i>Illustrations</i>	290
9.3	Passive and active microstructures	298
9.3.1	<i>Experimental studies</i>	300
9.3.2	<i>Theoretical studies</i>	303
9.4	Active microstructures as prototypes	307
	Bibliography	315
	Notes	316
	<i>Appendix: Cartesian vectors and tensors</i>	319
	<i>List of frequently used symbols</i>	341
	<i>References</i>	343
	<i>Author index</i>	355
	<i>Subject index</i>	359
	<i>Color section between pages 153 and 154</i>
