

Contents

1. Introduction	1
1.1 General Overview	1
1.2 Basic Features of Highly Charged Ions and Their Interactions	2
1.3 Highly Charged Ions in Astrophysics	3
1.4 Highly Charged Ions in Controlled Thermonuclear Fusion Research	4
1.5 Highly Charged Ions in Accelerator-Based Physics and Other Research Fields	5
1.6 Scope of the Book	5
2. Structure and Spectra of Highly Charged Ions	7
2.1 General Properties of the Spectra	7
2.2 Satellites of the Spectral Lines	9
2.3 Classification of the States and Spectral Lines of Multiply Charged Ions	11
2.4 Relativistic and Radiative Effects	19
2.5 Decay of Excited Ionic States. Radiation and Autoionization	25
2.6 Static and Dynamic Dipole Polarizabilities of Multiply Charged Ions	27
2.6.1 General Remarks	27
2.6.2 Static Polarizability	28
2.6.3 Dynamic Polarizability	32
3. Radiative Processes in the Continuous Spectrum	35
3.1 Bremsstrahlung	35
3.2 Photoionization and Photorecombination	41
3.3 Dielectronic Recombination	46
3.3.1 Resonance Character of the Process	46
3.3.2 Theory and Experiment	48
3.4 Autoionization	52
4. Electron Collisions with Highly Charged Ions: General Theory and Excitation Processes	55
4.1 Introductory Remarks	55
4.2 Basic Equations	56
4.3 Effective-Range Theory for Attractive Coulomb Field	59
4.4 Quantum Defect Method. The Seaton Theory	63

4.5	Correct Asymptotic Expansion. Influence of Dielectronic Recombination	65
4.5.1	Radial Green's Function	66
4.5.2	Solution of Integral Equations	68
4.5.3	T Matrix and Cross Sections	70
4.5.4	Radiative Decay of Resonances	71
4.6	Results of Calculations and Experimental Data	73
5.	Electron-Impact Ionization of Highly Charged Ions	78
5.1	One-Electron Ionization. General Remarks	78
5.2	Exchange Effects in Ionization. The Peterkop Theory	79
5.3	Threshold Behaviour of the Cross Section	84
5.4	Quantum-Mechanical Methods for Ionization Cross Section Calculations	85
5.5	Classical and Semi-Empirical Formulae	86
5.6	Excitation-Autoionization	87
5.7	Experimental Data and Comparison with Theoretical Calculations	89
5.8	Analytic Approximations for the Quantum-Mechanical Cross Sections	92
6.	Collisions of Atoms with Highly Charged Ions: General Theoretical Description	94
6.1	Two-Coulomb-Centre Problem	94
6.1.1	The Eigenvalue Problem	95
6.1.2	Correlation Rules and Pseudocrossings	97
6.1.3	Energy Splitting at a Pseudocrossing	104
6.1.4	Algorithms for Solving the Eigenvalue Problem for the (Z_1, e, Z_2) System	108
6.1.5	Application of the Two-Centre Problem to Many-Electron Diatomic Molecules: Molecular Orbital Model	110
6.2	Close-Coupling Methods	114
6.2.1	General Formulation of the Close-Coupling Methods	115
6.2.2	Molecular-Orbital Close-Coupling (MO – CC) Methods	117
6.2.3	Atomic-Orbital Close-Coupling (AO – CC) and Related Methods	125
6.2.4	Two-State Close-Coupling Models and Approximations	129
6.3	Perturbation Methods	133
6.3.1	Formal Theory of Atomic Reactions	133
6.3.2	Born Series	135
6.3.3	Distorted-Wave Method	136
6.3.4	Perturbation Treatment of Close-Coupled Equations	138
6.3.5	Second-Order and Related Approximations	139

6.4	Classical Descriptions	143
6.4.1	Binary-Encounter Approximation (BEA)	143
6.4.2	Classical Trajectory Monte Carlo (CTMC) Method	146
7.	Collisions of Atoms (Ions, Molecules) with Highly Charged Ions:	
	Charge-Transfer Processes	150
7.1	General Considerations	150
7.2	Charge Exchange at Low Energies	152
7.2.1	Decay Models	153
7.2.2	Multichannel Landau-Zener Model	160
7.2.3	Molecular-Orbital Close-Coupling Calculations	164
7.2.4	Analytic Treatment of Diabatic MO – CC Equations	166
7.3	Electron Capture at Intermediate Energies	169
7.3.1	AO – CC Method: Numerical Calculations	170
7.3.2	Approximate Treatments of Coupled-Channel Equations	171
7.3.3	Classical Treatments	177
7.4	Electron Capture at High Energies	180
7.4.1	The Brinkman-Kramers Approximation and Its Extensions	181
7.4.2	Higher-Order Approximations	188
7.4.3	Electron Capture into Continuum States	192
7.5	General Features of Single-Charge-Transfer Cross Sections	193
7.5.1	Scaling Laws for the Total Single-Charge-Transfer Cross Section	193
7.5.2	Final-State Distributions of Captured Electrons	197
7.5.3	Z-Oscillations of the Total Cross Sections	201
7.6	Single-Charge Transfer in Ion-Ion and Ion-Molecule Collisions	203
7.6.1	Ion-Ion Charge Exchange	204
7.6.2	Ion-Molecule Charge Exchange	207
7.7	Multiple-Charge Transfer	209
7.7.1	Two-Electron-Capture Processes	209
7.7.2	Multi-Electron-Capture Processes	217
8.	Collisions of Atoms (Ions) with Highly Charged Ions: Excitation and Ionization	220
8.1	Basic Electron Transition Mechanisms	221
8.2	Excitation Processes	222
8.2.1	Close-Coupling Treatments	222
8.2.2	UDWA Treatment	225
8.2.3	Perturbation Theory and VPS Approximation	227
8.2.4	Excitation in Ion-Ion Collisions	229
8.3	Single-Electron Ionization	231
8.3.1	Perturbation Treatments	232
8.3.2	DACC Theory for Ionization	234

8.3.3	UDWA Calculations	237
8.3.4	Classical Models	238
8.3.5	Higher-Order High-Energy Approximations	240
8.3.6	Ion-Ion and Ion-Molecule Ionization	241
8.3.7	Scaling Laws for Single-Electron Ionization	243
8.3.8	Direct Multiple-Ionization	244
8.4	Electron Loss and Stripping Processes	246
8.4.1	The Keldysh Quasi-Classical Method	247
8.4.2	Classical Treatments	248
8.4.3	Stripping Reactions	251
9.	Auger, Inner-Shell and Related Processes	253
9.1	Collisional Auger Processes Involving Outer Shells	253
9.1.1	Capture-Excitation	254
9.1.2	Capture-Ionization	256
9.1.3	Multiple Transfer Ionization	270
9.2	Inner-Shell Processes	272
9.2.1	Basic Electron Transition Mechanisms	272
9.2.2	K- and L-Shell Excitations	274
9.2.3	Vacancy Sharing	278
9.2.4	Correlated Electron Transitions in Vacancy Production and Decay	280
9.3	Some Aspects of Quasi-Molecule and Quasi-Atom Formation in Heavy Ion Collisions	281
9.3.1	Quasi-Molecular X-Ray Radiation	282
9.3.2	Positron Emission	282
10.	Rate Coefficients of Elementary Processes	286
10.1	Energy (Velocity) Distribution Function	286
10.2	Electron-Impact Excitation	288
10.3	Electron-Impact Ionization	293
10.4	Photorecombination	299
10.5	Dielectronic Recombination	301
10.6	Charge Transfer	305
