# *Contents*

<b>1. Introduction .....</b>	<b>1</b>
1.1. Ideal MHD and Magnetic Fusion .....	1
1.2. Units .....	3
<i>References</i> .....	3
<b>2. The MHD Model .....</b>	<b>5</b>
2.1. Introduction .....	5
2.2. Description of the Ideal MHD Model .....	6
2.3. Derivation of the Ideal MHD Model .....	10
2.3.1. Starting Equations .....	10
2.3.2. Two-Fluid Equations .....	12
2.3.3. Low-Frequency Long-Wavelength Asymptotic Expansions .....	16
2.3.4. The Single-Fluid Equations .....	17
2.3.5. The Ideal MHD Limit .....	20
2.4. Region of Validity .....	25
2.4.1. Overall Criteria .....	25
2.4.2. Conservation of Mass .....	28
2.4.3. Momentum Equation .....	28
2.4.4. Energy Equation .....	29
2.4.5. Ohm's Law .....	31
2.4.6. Summary of Validity Conditions .....	32
2.5. Collisionless MHD .....	32
2.6. Summary .....	38
<i>References</i> .....	39
<i>Problems</i> .....	39

<b>3. General Properties of Ideal MHD . . . . .</b>	<b>43</b>
3.1. Introduction . . . . .	43
3.2. Boundary Conditions . . . . .	43
3.2.1. Perfectly Conducting Wall . . . . .	44
3.2.2. Insulating Vacuum Region . . . . .	44
3.2.3. Plasma Surrounded by External Coils . . . . .	47
3.3. Local Conservation Relations . . . . .	48
3.4. Global Conservation Laws . . . . .	51
3.4.1. Perfectly Conducting Wall . . . . .	51
3.4.2. Insulating Vacuum Region . . . . .	52
3.4.3. Plasma Surrounded by External Coils . . . . .	54
3.5. Conservation of Flux: “Frozen” Field Line Picture . . . . .	54
3.6. Summary . . . . .	56
<i>References</i> . . . . .	56
Problems . . . . .	57
<b>4. Equilibrium: General Considerations . . . . .</b>	<b>59</b>
4.1. Introduction . . . . .	59
4.2. Basic Equations . . . . .	60
4.3. The Virial Theorem . . . . .	61
4.4. Toroidicity . . . . .	63
4.5. Magnetic Flux Surfaces . . . . .	64
4.6. Surface Quantities: Basic Plasma Parameters and Figures of Merit . . . . .	67
4.7. Equilibrium Degrees of Freedom . . . . .	74
4.8. The Basic Problem of Toroidal Equilibrium . . . . .	75
4.9. Summary . . . . .	83
<i>References</i> . . . . .	85
<i>General References</i> . . . . .	85
Problems . . . . .	85
<b>5. Equilibrium: One-Dimensional Configurations . . . . .</b>	<b>89</b>
5.1. Introduction . . . . .	89
5.2. The $\theta$ Pinch . . . . .	89
5.3. The $Z$ Pinch . . . . .	94
5.4. The General Screw Pinch . . . . .	98
5.5. Summary . . . . .	102
<i>References</i> . . . . .	103
Problems . . . . .	103
<b>6. Equilibrium: Two-Dimensional Configurations . . . . .</b>	<b>107</b>
6.1. Introduction . . . . .	107
6.2. The Grad-Shafranov Equation . . . . .	108

6.2.1. Derivation . . . . .	108
6.2.2. Plasma Parameters and Figures of Merit . . . . .	111
6.3. The Reversed Field Pinch . . . . .	115
6.4. The Ohmically Heated Tokamak . . . . .	125
6.5. The High- $\beta$ Tokamak . . . . .	136
6.6. Noncircular Tokamaks . . . . .	147
6.7. The Flux-Conserving Tokamak . . . . .	154
6.8. The Spherical Tokamak . . . . .	162
6.9. Tokamaks with Divertors . . . . .	167
6.10. Summary . . . . .	172
References . . . . .	174
General References . . . . .	174
Problems . . . . .	175
<b>7. Equilibrium: Three-Dimensional Configurations . . . . .</b>	<b>185</b>
7.1. Introduction . . . . .	185
7.2. The Parallel Current Constraint . . . . .	188
7.3. Helical Sideband Equilibria . . . . .	190
7.4. The Elmo Bumpy Torus (EBT) . . . . .	196
7.5. Stellarator Equilibria . . . . .	204
7.6. Stellarators, Heliotrons, and Torsatrons . . . . .	211
7.7. Summary . . . . .	224
References . . . . .	226
General References . . . . .	226
Problems . . . . .	227
<b>8. Stability: General Considerations . . . . .</b>	<b>231</b>
8.1. Introduction . . . . .	231
8.2. Definition of Stability . . . . .	232
8.3. Waves in an Infinite Homogeneous Plasma . . . . .	234
8.4. General Linearized Stability Equations . . . . .	238
8.4.1. Initial Value Formulation . . . . .	239
8.4.2. Normal-Mode Formulation . . . . .	240
8.5. Properties of the Force Operator $\mathbf{F}$ . . . . .	241
8.5.1. Self-Adjointness of $\mathbf{F}$ . . . . .	242
8.5.2. Real $\omega^2$ . . . . .	242
8.5.3. Orthogonality of the Normal Modes . . . . .	243
8.5.4. Spectrum of $\mathbf{F}$ . . . . .	244
8.6. Elements of Variational Calculus . . . . .	246
8.7. Variational Formulation . . . . .	250
8.8. The Energy Principle . . . . .	251
8.8.1. Statement and Proof of the Energy Principle . . . . .	252
8.8.2. The Extended Energy Principle . . . . .	255

8.8.3. The Intuitive Form of $\delta W_F$ . . . . .	258
8.8.4. Summary . . . . .	260
8.9. Incompressibility . . . . .	261
8.10. Vacuum Versus Force-Free Plasma . . . . .	264
8.11. Classification of MHD Instabilities . . . . .	266
8.11.1. Internal/Fixed Boundary Modes . . . . .	266
8.11.2. External/Free-Boundary Modes . . . . .	266
8.11.3. Pressure-Driven Modes . . . . .	267
8.11.4. Current-Driven Modes . . . . .	269
8.12. Summary . . . . .	271
References . . . . .	273
General References . . . . .	274
Problems . . . . .	274
<b>9. Stability: One-Dimensional Configurations . . . . .</b>	<b>279</b>
9.1. Introduction . . . . .	279
9.2. The $\theta$ Pinch . . . . .	280
9.3. The Z Pinch . . . . .	283
9.3.1. $m \neq 0$ Modes . . . . .	284
9.3.2. $m = 0$ Mode . . . . .	286
9.4. The General Screw Pinch . . . . .	289
9.4.1. Evaluation of $\delta W$ . . . . .	289
9.4.2. The Full Normal-Mode Formulation . . . . .	293
9.4.3. Suydam's Criterion . . . . .	295
9.4.4. Newcomb's Analysis . . . . .	299
9.4.5. The Oscillation Theorem . . . . .	304
9.4.6. The Effect of a Resistive Wall . . . . .	307
9.5. The Reversed Field Pinch . . . . .	315
9.5.1. Introduction . . . . .	315
9.5.2. Internal Pressure-Driven Modes . . . . .	316
9.5.3. Internal Current-Driven Modes . . . . .	319
9.5.4. External Modes . . . . .	322
9.5.5. Discussion of Ideal Stability Results . . . . .	324
9.5.6. The Force-Free Paramagnetic Model . . . . .	325
9.5.7. Taylor's Theory . . . . .	328
9.5.8. Overview of the RFP . . . . .	337
9.6. The "Straight" Tokamak . . . . .	338
9.6.1. Introduction . . . . .	338
9.6.2. Internal Pressure-Driven Modes . . . . .	338
9.6.3. Internal Current-Driven Modes . . . . .	340
9.6.4. External Modes (The $m = 1$ Kruskal-Shafranov Limit) . . . . .	342

9.6.5. External Modes ( $m \geq 2$ External Kinks) .....	344
9.6.6. Summary .....	351
9.7. Summary .....	352
References.....	354
General References .....	355
Problems .....	356
<b>10. Stability: Multidimensional Configurations .....</b>	<b>363</b>
10.1. Introduction.....	363
10.2. General Reduction of $\delta W$ for Ballooning Modes .....	364
10.3. The Relationship between the “Magnetic Well” and “Average Curvature” .....	368
10.3.1. Introduction .....	368
10.3.2. Flux Function in a Closed-Line System .....	368
10.3.3. Closed-Line Flux Coordinates .....	370
10.3.4. The Interchange Condition .....	372
10.3.5. The Relation between Average Curvature and Magnetic Well .....	373
10.3.6. Summary .....	377
10.4. The Elmo Bumpy Torus (EBT) .....	378
10.4.1. Introduction .....	378
10.4.2. The Effect of Rigid External Currents .....	379
10.4.3. EBT Flux Coordinates.....	381
10.4.4. The Ballooning Mode Equation .....	384
10.4.5. Interchange Stability .....	386
10.4.6. Ballooning Mode Stability .....	390
10.4.7. Summary of EBT .....	392
10.5. Tokamaks .....	392
10.5.1. Introduction .....	392
10.5.2. Tokamak Flux Coordinates .....	394
10.5.3. The Tokamak Ballooning-Mode Equation: Shear versus Periodicity .....	397
10.5.4. Interchange Stability: The Mercier Criterion ...	401
10.5.5. Ballooning Modes.....	410
10.5.6. Low- $n$ Internal Modes .....	419
10.5.7. External Modes.....	421
10.5.8. Numerical Results: The Sykes Limit, the Troyon Limit .....	426
10.5.9. $n = 0$ Axisymmetric Modes .....	433
10.5.10. Overview of the Tokamak .....	437
10.6. Stellarators.....	439
10.6.1. Introduction .....	439

10.6.2. General Description of Stellarator Instabilities . . . . .	440
10.6.3. Creating a Magnetic Well in a Stellarator . . . . .	442
10.6.4. Design of a Stellarator Experiment . . . . .	446
10.7. Summary . . . . .	452
References . . . . .	456
Problems . . . . .	457
<b>Appendices . . . . .</b>	<b>463</b>
Appendix A . . . . .	465
Appendix B . . . . .	469
Appendix C . . . . .	473
Appendix D . . . . .	477
<b>INDEX . . . . .</b>	<b>483</b>
