

Contents

<i>Contributors</i>	<i>vii</i>
<i>Preface</i>	<i>ix</i>
Section 1. Introduction	1-1
Part A. Basic Concepts of Heat Transfer by J. P. Hartnett and W. M. Rohsenow	1-1
Part B. Mathematical Methods by P. J. Schneider	1-18
Section 2. Thermophysical Properties by Warren Ibele	2-1
Section 3. Conduction by P. J. Schneider	3-1
Section 4. Methods of Obtaining Approximate Solutions by P. Razelos ...	4-1
Section 5. Analog Methods by Victor Paschkis	5-1
Section 6. Free-convection Boundary-layer Heat Transfer by Robert D. Cess	6-1
Section 7. Forced Convection, Internal Flow in Ducts by William M. Kays and H. C. Perkins	7-1
Section 8. Forced Convection, External Flows by Morris W. Rubesin and Mamoru Inouye	8-1
Section 9. Rarefied Gases by Warren H. Giedt and D. Roger Willis	9-1
Section 10. Techniques to Augment Heat Transfer by Arthur E. Bergles ...	10-1
Section 11. Electric and Magnetic Fields by Mary F. Romig	11-1
Section 12. Condensation	12-1
Part A. Film Condensation by Warren M. Rohsenow	12-1
Part B. Dropwise Condensation by Peter Griffith	12-34
Section 13. Boiling by Warren M. Rohsenow	13-1
Section 14. Two-phase Flow by Peter Griffith	14-1
Section 15. Radiation	15-1
Part A. Relations and Properties by E. R. G. Eckert	15-1
Part B. Radiant Interchange between Surfaces Separated by Nonabsorbing and Nonemitting Media by E. M. Sparrow	15-29

vi Contents

Part C. Radiation Exchange in an Enclosure with a Participating Gas by R. V. Dunkle	15-53
Part D. Equilibrium Radiation Properties of Gases by S. S. Penner	15-72
Section 16. Ablation by H. Hurwicz and J. E. Rogan	16-1
Section 17. Mass Transfer Cooling by J. P. Hartnett	17-1
Section 18. Heat Exchangers by A. C. Mueller	18-1
Section 19. High-temperature Thermal Protection Systems by H. Hurwicz and J. E. Rogan	19-1

Index follows Section 19.
