

TABLE OF CONTENTS

CHAPTER	PAGE
I. KINEMATICS	1
1.1. The Fundamental Standard of Rest	1
1.2. The Local Standard of Rest	3
1.3. The Distribution of Residual Velocities. Schwarzschild's Law	7
1.4. Observational Consequences of a Field of Differential Motions: The Differential Rotation of the Galaxy	16
1.5. The Asymmetry of Stellar Motions and the Phenomenon of the High-Velocity Stars	26
1.6. Extragalactic Systems: Structural Features	33
1.7. Extragalactic Systems: Kinematical Features	37
1.8. Globular and Galactic Clusters	40
1.9. General Remarks	41
Bibliographical Notes	43
II. THE TIME OF RELAXATION OF A STELLAR SYSTEM	48
2.1. An Analysis of the Nature of the Forces Acting on a Star	48
2.2. The Formulation of the Problem	50
2.3. The Time of Relaxation, T_E	51
2.4. The Time of Relaxation, T_D	67
2.5. The Mean Free Path	74
2.6. Viscosity	76
Bibliographical Notes	78
III. GALACTIC DYNAMICS: THE DYNAMICS OF DIFFERENTIAL MOTIONS	80
3.1. The Time of Relaxation of the Galaxy	80
3.2. Liouville's Theorem	83
3.3. The Consequences of Liouville's Theorem for Stellar Dynamics	85
3.4. The Dynamics of Stellar Systems with Differential Motions; the General Theory	88
3.5. The Helical Symmetry of Stellar Systems with Differential Mo- tions and in Steady States	102
3.6. The Two-dimensional Problem: Stellar Systems with Circular Symmetry and in Nonsteady States	105
3.7. Examples of Stellar Systems Having Axial Symmetries and in Nonsteady States	116

CHAPTER	PAGE
3.8. The Physical Characteristics of Stellar Systems with Axial Symmetries	121
3.9. Stellar Systems Formed by Superposition	126
Bibliographical Notes	130
IV. GENERAL DYNAMICS OF STELLAR SYSTEMS: SPIRAL STRUCTURE	135
4.1. Stellar Systems Described by a Spherical Distribution of the Residual Velocities	136
4.2. Physical Characteristics of Stellar Systems Described by a Spherical Distribution of the Residual Velocities	147
4.3. Circular Orbits and Nearly Circular Orbits in an Axially Symmetrical Potential Field with a Plane of Symmetry, $\mathfrak{B}(\bar{\omega}, z) \equiv \mathfrak{B}(\bar{\omega}, -z)$	152
4.4. The Characteristic Envelope	161
4.5. The Instability of Circular Orbits at the Peripheries of Highly Spheroidal Systems	164
4.6. Lindblad's Theory of Spiral Structure in Nebulae	171
4.7. Critical Remarks on Lindblad's Theory: Some Alternative Suggestions	180
4.8. The Equation of Stellar Hydrodynamics	184
Bibliographical Notes	191
V. THE DYNAMICS OF STAR CLUSTERS	193
5.1. The Equations of Motion of an Isolated Star Cluster: The Lagrangian Identities	193
5.2. The Dispersion of the Velocities in a Cluster: The Time of Relaxation and the Mean Free Path	199
5.3. The Rate of Disintegration of a Cluster by the Escape of Stars	205
5.4. The Escape of Stars of Different Masses from a Cluster	209
5.5. The Effect of Galactic Rotation on the Dynamics of Clusters	213
5.6. The Stability of a Homogeneous Ellipsoidal Cluster	220
5.7. The Effect of Stellar Encounters on the Dynamics of Clusters	223
5.8. The Dynamics of Globular Clusters	231
Bibliographical Notes	236
APPENDIXES	
I. DEFLECTION OF A STAR IN THE ORBITAL PLANE ACCORDING TO THE TWO-BODY PROBLEM	239
II. THE GENERAL THEORY OF THE STABILITY OF ORBITS	243
III. ASTRONOMICAL CONSTANTS AND DATA	248
LATER PAPERS	
I. DYNAMICAL FRICTION	249
II. NEW METHODS IN STELLAR DYNAMICS	277
SUBJECT INDEX	311
